

Wants Beaver Protected and Open Season for Cats

"Happy" Woods Objects to Recent Open Season for Beaver. Thinks Department was Ill-Advised. Would Protect Beaver. Cats a Menace Through Destroying Insect-Eating Birds.

Schumacher, Ont., May 2, 1939

To the Editor of
The Advance, Timmins.

Dear Sir: I question the wisdom of Dept. of Game and Fisheries in declaring an open season on beaver in the spring of the year when the females are carrying young. One man in a protest called the Department the "Department for Extinction of Game," and there seems to be a just cause for saying that, for at the time the season was declared open, one female caught meant the loss of five or six young beavers. The proper time to trap beaver would be before the rutting season. Now, the people were told by the Department that after a long period of protection the open season was justified. How well they have been protected is shown when the police searching a plane for a gold brick stolen from a local mine found a man who had four hundred and forty-four beaver skins, and this man, unable to pay his fine, went to jail protesting it was wrong to pick on him when lots of others were doing it. Now, as to the excuse of the Dept. on the grounds that the beaver had become a nuisance, and were doing harm, that means that the animal is classed as vermin, like weasels and cats; but this animal is one of our noblest, and should the long argument end as to a National Flag for Canada and it be adopted, then the most fitting thing for an emblem would be a beaver—Canada's first engineer, that works hard all its life skillfully building dams that prevent floods. Canada has thousands and thousands of square miles of bush and should let the beaver have a portion of land, and never mind if part of it is flooded, for that portion the beaver floods prevents a flood elsewhere, and conserves the water supply. It is a job well done without letting of contracts to be discussed by politicians. I have spent pleasant hours watching beaver at work and their labor is done with great intelligence. This animal deserves the best treatment we can give it, and if the Department had continued to try and protect the beaver and declared an open season on Domestic Cats they would be doing a good thing. I have watched for years the birds that eat insects in gardens and noticed that while they are hunting for the pests that destroy plants and vegetables, the cat will stalk the birds and usually get them.

Now these insects the birds would have eaten if the cats did not eat the birds are left to multiply and in the very near future I predict the government will find that it would have been wiser to value the honest beaver and trap the destructive cat.

Yours truly,

J. M. WOODS.

Had Been Prisoners of War in Spain for a Year

R. Dickie, former secretary of the Communist party in Kirkland Lake is from 31 volunteers, who enlisted from Canada early in the Spanish war, sailing from Havre last Friday. These volunteers were among those captured by Franco in the Aragon offensive of March, 1938, and recently released. A Mangotis, of Schumacher, is also among them.

Little Rest Day or Night

Woman With Severe Neuritis

For the benefit of others who may be troubled with the complaint she suffered from, a grateful woman writes:

"Last May I had a very severe attack of neuritis in the leg, which made it impossible for me to rest during the day, or to get regular sleep at night—to say nothing of the intense pain."

"Various medicines gave no very little relief, and a friend advised me to give Kruschen a trial, as she had derived benefit from it while suffering similarly. I am so thankful that I took her advice. From the very first bottle I felt relieved, and now I am quite free from pain, and get a good night's sleep." (Mrs.) H. C.

Neuritis, like rheumatism, lumbago, and sciatica, is often caused by needle-pointed uric acid crystals which form as the result of sluggish eliminating organs. Kruschen helps to convert those crystals into a harmless solution, which is removed through the natural channels.

106th Girl Guides Present Excellent Concert Here

Large Audience Enjoy Effective and Pleasing Programme.

The 106th Group Girl Guides held a successful concert on Monday evening in St. Matthew's Church hall, the hall being packed for the occasion with an appreciative audience.

To open the programme, "O Canada" was sung, and the entire company joined in the singing of "When Irish Eyes Are Smiling." Freda Campbell, as chairman, welcomed the audience, and introduced the numbers on the programme.

The programme in full is as follows:

Piano solo—Bernice Bridgman.

Vocal solo—Erwin Williams.

Group singing—"Big Brown Bear."

Vocal solo—Pearl Harry.

Group singing—"Sing Little Banjo Sing," with obligato—by Elizabeth Curtis.

Vocal solo—Lucette Hansen.

Dialogue—Marion McLeod, Freda Campbell.

One-act play—"Katie's New Hat"—cast of characters—Gwen Appley, Janet MacMillan, Jean Parson, Beth Patterson, Muriel Chrispin and Ruth Hansen.

Intermission.

Piano solo—Peggy Webster.

Entire company, singing "Glow Worm," obligato by Lucette Hansen.

Vocal solo—Betty MacDonald.

Group singing—"Lilac Time."

Duet—Barbara Thompson, Elizabeth Curtis.

One-act play—"The Wrong Babies" cast of characters—Christine Brown, Marion McLeod, Vivian Poffita, Eva Hansen, Garnet McLeod, Sheila Rymer, Lois Southern, Edith Golding.

Dance—Dorothy Downs.

Group singing—"Little Sir Echo."

Vocal solo—Evelyn Chrispen.

Group singing—"Be A Good Guy."

Following the programme, Mrs. Johnston, lieutenant, thanked the audience for their attendance, and the Guides presented Mrs. P. H. Carson, who directed the music and singing, with a lovely handbag as a token of their appreciation.

The evening closed with "Taps" by the Girl Guides, and the singing of "God Save the King."

Paper on Silicosis in April Mining Bulletin

Work undertaken by J. J. Denny, metallurgical engineer, McIntyre Porcupine Mines Limited and his associates W. D. Robson, chief surgeon for the company, and D. A. Irwin, Department of Medical Research, University of Toronto, for the prevention of silicosis by metallic aluminum is making satisfactory progress, according to a paper by the three men appearing in the April issue of the Bulletin, Canadian Institute of Mining and Metallurgy.

Experimental work with this object in view has been in progress at the McIntyre mine for some time past, and certain methods have been devised whereby an excellent dispersion of the powder can be obtained in the underground atmosphere. By using small quantities of aluminum powder dispersed in a dust cloud, reductions of 90 per cent or better in the solubility of the siliceous material, from which silicosis is developed, were obtained from dust samples taken 150 to 300 from the face following a drift-round blast having a volume of 8000 cubic feet. The investigations are still in progress.

In a preliminary paper it was shown that the addition of small quantities of metallic aluminum powder almost completely checked the solubility of siliceous matter in a beaker. Six rabbits exposed to quartz dust for six months showed well developed silicosis whereas seven rabbits exposed to quartz dust plus one per cent metallic aluminum powder for the same period did not develop silicosis. At that time, the authors were not in position to state either the manner in which the aluminum reduced the solubility of siliceous material, or from the animal experiments, whether the aluminum was acting locally or systematically, or for what period after the cessation of dusting it would continue to act.

The present paper gives an account of the experimental work that has since been done in this end and other directions, and discusses the results of the experiments. Among the conclusions reached from the work so far undertaken are that to prevent sil-

COUNCILLORS OF STATE

Although she will accompany him on a trip and be absent from England, when he is, Queen Elizabeth is also included in the council of state appointed to act for the King while he is away. This is required by law. The Duke of Kent (left), youngest brother of the King, and the Duke of Gloucester (right), are two of the five-person council.

cious aluminum dust may be inhaled independently of the siliceous dust; that the aluminum dust must be sufficiently concentrated in the inhaled dust to provide a minimum concentration in the lung of 1 per cent at all times; and that aluminum dust in any concentration necessary to prevent silicosis is hundreds of times below the explosive concentration of aluminum powder.

Honoured by Latchford Friends on Eve of Leaving

Latchford, May 3—Mr. and Mrs. Cyril Kennedy and son Curtis left last week for Swastika. Mr. Kennedy received the appointment of station agent there. Although they have lived only a short time in Latchford they have made many friends who regret their departure. On Saturday evening Mrs. M. McDermid and Mrs. F. Keenan entertained at a farewell party for Mrs. Kennedy in the McDermid home. Cards were played after which Mrs. Keenan presented the guest of honour with a beautiful embroidered linen luncheon set as a memento of her stay here. Mrs. Kennedy expressed her thanks, and also her regret at leaving Latchford. The evening closed with many good wishes for her future happiness in her new home.

The same evening the gentlemen friends surprised Mr. Kennedy at his home, taking lunch with them. A social hour was spent and a smoking set was presented to Mr. Kennedy, who was always willing to give the boys any assistance in hockey and in any way he could. Many expressions of regret have been heard that Mr. and Mrs. Kennedy have left Latchford, and the good wishes of the community follow them to their new home.

Quebec Village the Centre of Promising New Industry

Centred in the village of Abercorn, Quebec, one of the newest of Canadian industries, the breeding of angora rabbits on a commercial scale, is now entering its third prosperous year.

Run by a co-operative unit of several breeders the industry breeds about six hundred angoras, each producing about a pound and a half of wool a year. An increasing demand for the silky, long-

haired wool is aiding the industry in its growth, says the April issue of the C-I-L Oval in which the co-operative activity is described. Eight times as warm as sheep's wool, angora is in demand as a lining for aviation uniform linings, muffs, gloves and scarves, says the article. Hollywood also uses angora to line silk dresses to prevent them from rustling before the microphones. A feature of the Canadian wool is that it does not shed like the imported varieties. The Green Mountain climate and the diet which includes an ample ration of iodized salt are said to be responsible for the superiority of the Canadian wool.

Detachable Bit Drill-Steel Being Used at Paymaster

Following extensive investigations by A. E. Pugsley its mine superintendent, and W. G. Brissenden, its research engineer, Paymaster Consolidated Mines, Limited, has turned to the use of detachable bit drill steel. The two officials advise in their joint paper appearing in the April issue of the Bulletin, Canadian Institute of Mining and Metallurgy.

Made necessary by transportation and distribution difficulties that had arisen through the use of standard steel in three widely separated mine areas serviced by a central sharpening shop, the investigations were commenced about two years ago and have continued since then. The detachable bit drill steel performance was first studied in the workings of No. 2 mine, where the results obtained definitely established the economy of this type of drill steel.

It appeared for a time that the principal advantage to be derived from use of the detachable bits would be a reduction in transportation and distribution costs. However, their use has resulted also in more drilling per machine shift in stopping and raising operations; in greater flexibility in the drill steel set-up, and a tendency toward greater efficiency at all working faces; in a lower steel cost per foot of hole drilled, and in other minor advantages over the use of standard steel.

In the paper are given descriptions of the detachable bit, and of shop and underground practices, together with data on economy studies, and on factors concerning the use of the bits.

Given Six Months in Jail for Stealing Dynamite

ROUNYN, May 3—James Harold Nodwell was sentenced by Magistrate A. Bally to a six months jail term for the theft of 60 cases of dynamite from the H. J. O'Connell Company. Nodwell had disposed of the dynamite to a contracting firm who had purchased it in good faith. Arrest was made by provincial police.

Another arrest made by Provincial police was that of Edouard Dulac—on a charge of attempting to obtain money under false pretences. His case will be tried at the fall assizes in Amos. In the meanwhile he is lodged in Ville Marie county jail.

Amédée Goyette was sentenced at Amos to one month in jail for an offence against section 301, par. 1, of the Criminal Code.

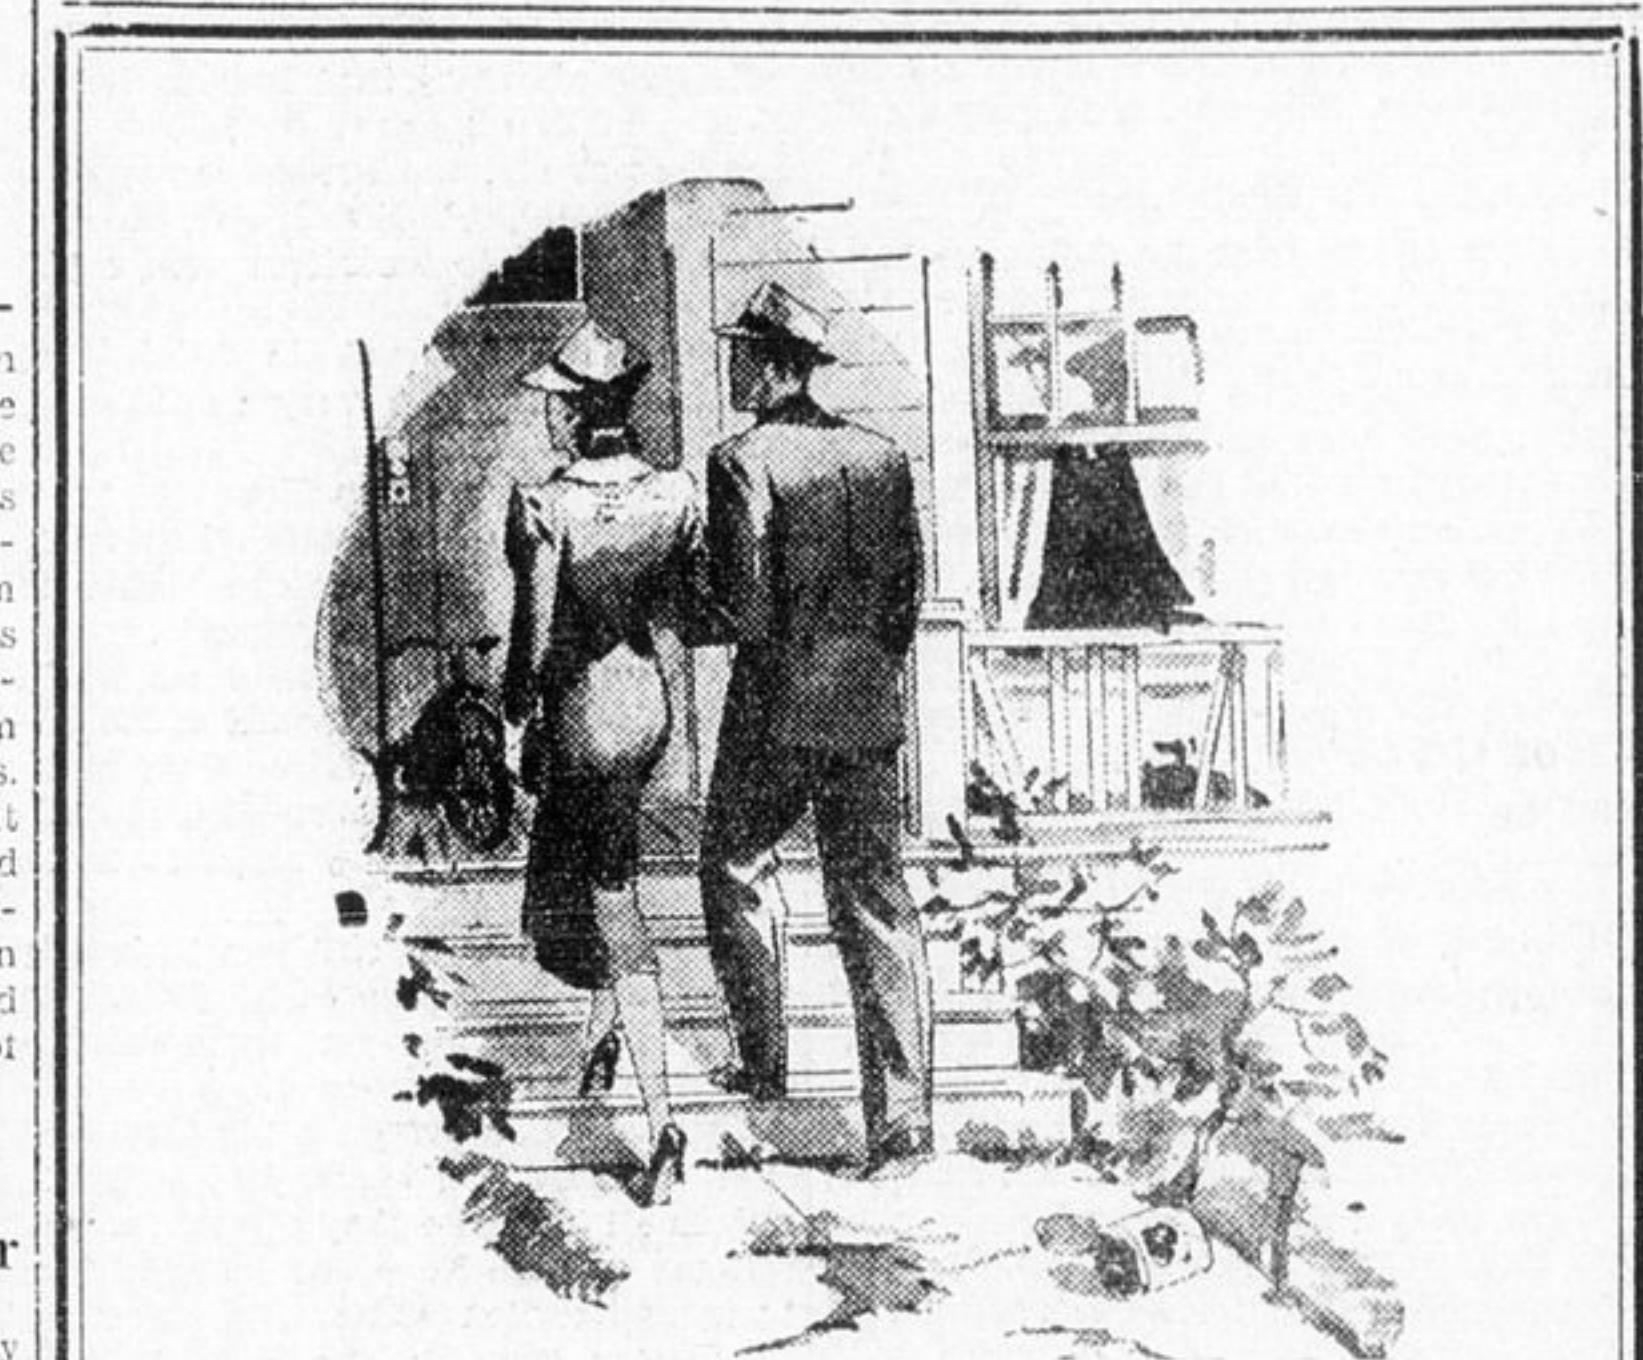

Toronto Star: A man accused of attempted robbery was found to have scarlet fever when he appeared in a Toronto court. He was lucky not to be charged with being a red.

LITTLE MOMENTS IN HISTORY

One evening, an associate editor of the New York Tribune accosted Horace Greeley as he came to his desk, and said: "Mr. Greeley, didn't you know that you made a dreadful blunder in one of your statistical editorials this morning?" "No; how was it?" Greeley asked. "Why, you said something about Heidsieck and champagne. Don't you know Heidsieck is champagne?" "Well," said Greeley, quietly, "I guess I am the only editor in this newspaper that could make that mistake."

North Bay Nugget: The hoe, rake and spade are certainly being over-worked these days as the city is having its spring cleaning.

SNAP
CLEANS HANDS QUICKLY

"This can't be THEIR place!"

"It must be. There's the number. But, off hand, I'd say you'd better ask the Maes over to OUR house. It would give us a chance to show them what Hill-Clark-Francis did for us. I'll bet they've never even heard of the government Home Improvement Plan and how you can modernize and repair your house inside and out without putting up one cent in cash. If I have a talk with Mac and Hill-Clark-Francis tackles this place, I'll bet you won't know it next time we call."
