

Will Ask Merchants Close on Pay Nights

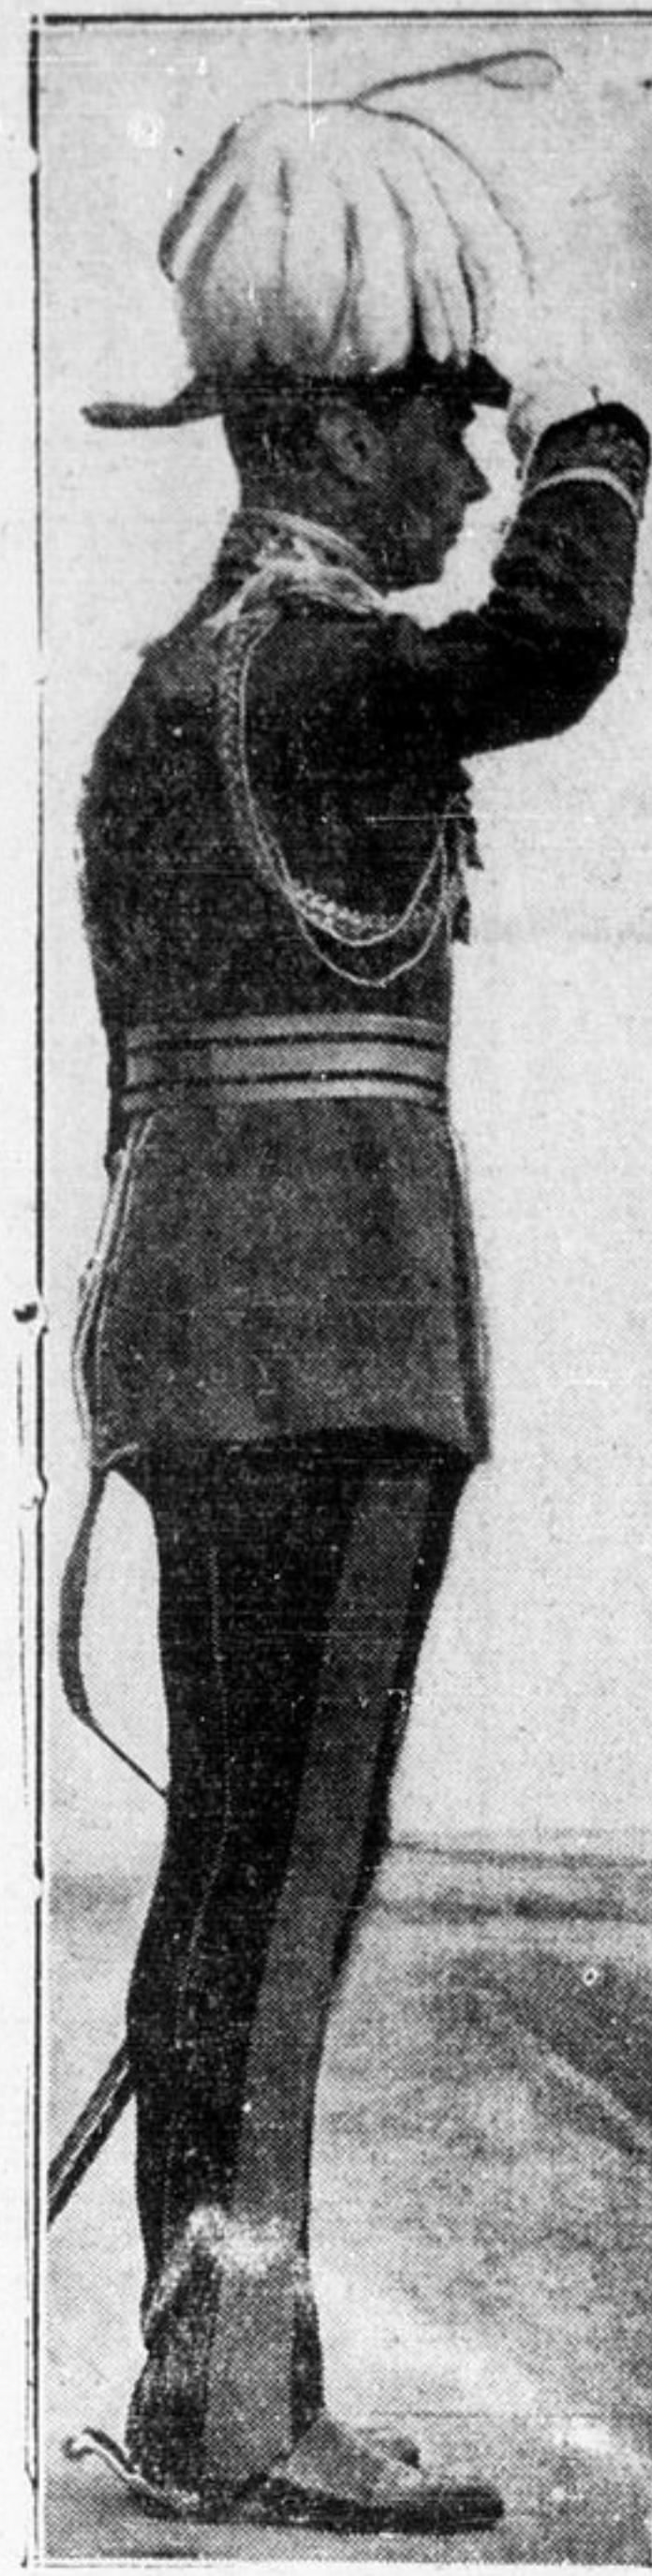

(Continued from Page One) to do so," said the Mayor. "I suggest that a general meeting of merchants be called. The Public Relations Committee could call the meeting and make suggestions as to hours."

refrain from sweeping the dirt from their stores out on to the sidewalks. "Some do not even bother sweeping the refuse into the gutter. They just leave it on the streets," said the Councilor. He felt that merchants should be a little tidier.

They both were referred to the Public Works Committee. The Council passed a resolution of appreciation thanking all those who in any way helped to make the celebration on May 22 a success.

Mayor made an outburst not long ago when it appeared as though the Timmings Council had not been invited. "I was a little critical when the invitation didn't come," said the Mayor. "At the time I said to a reporter that I regretted the oversight on the part of the Sudbury Council. A member from Sudbury telephoned to say that their records showed that two invitations had been sent."

Taking Canada's Salute

Standing on the steps of the parliament buildings at Ottawa, King George, clad in the brilliant full dress uniform of a field-marshal takes Canada's salute.

DIONNES SUING DR. DAFOE IN ALLEGED LIBEL CASE

Yesterday The North Bay Nugget carried a story to the effect that the Dionnes had entered suit for unstated damages against Dr. Dafeo for alleged libel. Dr. Dafeo is alleged to have appeared at a New York Club wearing burlesque doctor's garb and labelled "Doctor of Litters"—"Mass Deliveries."

Charming Wedding at United Church Last Evening

Miss Hazel Campbell and Mr. Henry Ringstead Married.

In the presence of a few intimate friends, a charming wedding took place at the United Church manse on Wednesday evening at 7:30 o'clock, when the Rev. W. M. Mustard united in marriage Hazel, daughter of Mr. and Mrs. Campbell of Toronto, and Mr. Henry Ringstead, son of Mr. and Mrs. Odin Ringstead, of 17 Elm street north, Timmings.

The bride was lovely in a grey tailored suit, with white accessories and a corsage of deep red roses, and lily-of-the-valley. She was attended by Mrs. Gordon Campbell, her sister-in-law, as matron-of-honour, attractively attired in a suit of yellow crepe, with white accessories, and a corsage of Talisman roses.

Mr. Gordon Campbell, brother the bride, acted as groomsmen. Following the ceremony, a wedding dinner was served at the home of the groom's parents to close friends and relatives. The groom's mother received the guests, becomingly attired in an ensemble of black crepe.

Later in the evening, the bride and groom received their numerous friends at an reception in the Harmony hall, where a Hawaiian orchestra supplied music for dancing, and a dainty buffet lunch was served.

Mr. and Mrs. Ringstead will reside at 206 Balsam street north.

Wishes Wonders of Science Were Put to Better Use

North Battleford Optimist: We cannot fully comprehend the marvelous advancement of science during the last decade. In every branch of research, new discoveries are being made, new secrets of nature opened up, new chemical processes, and new manufacturing techniques—in fact, man's conquest over nature has assumed magnificent proportions, which enables the human family to live in a world of marvels and wonderment. We could, if all this recently won knowledge were used for the enrichment of life, live in an earthly paradise, with an abundance for all, and with ample leisure to enjoy the limitless fields for the highest culture within history — and that for the masses.

If men would abandon the greed, jealousy of nations, economic strife, suspicion and fear that lead to oppression, poverty, armaments and war; if they would unite to attack disease, folly and vice, we could, with our present knowledge and equipment, eradicate drudgery, poverty, most of the ill-health and disease, and fill the world with happiness and beauty.

Wild Flowers Threatened with Extinction in Canada

(From Globe and Mail) The interest of flower lovers will be aroused by the news from White River that the people there presented the Queen with a small canoe filled with trailing arbutus; but how many not especially interested in growing things know this beautiful flower, now almost rarer than the gold in the plaque on which Toronto wrote its Royal greeting? It is one of those flowers Southern Ontario has lost through neglect or vandalism, but fortunately may still be found in regions where Nature's beauties are still respected. White River chose an unusual gift.

A box of arbutus reached this office a few days ago from Swastika, Ont., as a demonstration of the efforts of one ardent lover of flowers to preserve part of Ontario's pioneer glory. Near this northern town, Mr. D. Armbrust, a one-time member of the staff of The Globe, is growing and cultivating rare plants threatened with extinction. If he succeeds, as he hopes, in his self-imposed mission the country will be richer in color and fragrance, for there is a chance that citizens may become interested in reviving even in this part of the land flowers once common but now almost unknown.

The Quebec Chronicle-Telegraph, which will celebrate its 175th anniversary next month, published an editorial a few days ago entitled, "Stop Wanton Ruin of Wild Flowers." It is advice greatly needed. It is needed on a day like this, when motorists will go far and wide through the country and are liable to pick flowers which attract their attention without considering whether they are destroying something for ever.

Ontario has designated the white trillium its floral emblem. Yet people thoughtlessly pluck armfuls of these attractive plants regardless of the destruction done. In their native woods they are beautiful. Lying on the seat of a motor car, they soon become poor wilted things. They should not be picked, because, as the Quebec paper states, picking means taking the foliage on which depends the maturing of the bulbous root for the following season's crop of flowers.

Queen Elizabeth will take White River's canoe home to the little Princesses. The flowers will be a memory, but the presentation may help to revive interest in the disappearing plants.

She Was a Victim of Headaches

Kruschen Got at the Cause

This woman's headaches were of the gripping kind that reduce the sufferer to something like helplessness. She tried tablets. She tried pills. All without avail. Only Kruschen could help her.

"I used to get very bad headaches," she writes. "No tablets or pills of any kind could relieve them. One morning, casually, I tried Kruschen Salts in a glass of hot water. I continued taking it, but I have not had one of those awful headaches since. Kruschen suits me better than anything else. I find it very good."—(Mrs.) L.A.W.

Headaches can nearly always be traced to sluggishness of the kidneys, liver and intestines and to the unsuspected retention in the system of stagnating waste material which poisons the blood. The numerous salts in Kruschen stimulate the internal organs to healthy, regular action so that no clogging waste is allowed to collect. Your inside is kept clean and serene. And that is just how Kruschen Salts brings quick and lasting relief from headaches.

Do the People Appreciate The Advantages They Enjoy

(Kiwamis Magazine) We people on this continent are an unappreciative lot. In a dictator-ridden world, we have more liberty, more freedom of thought, speech and action than can be found anywhere else on the globe, yet we take it all for granted.

We have more creature comforts, more domestic conveniences and better living conditions than any two nations on earth, yet it is a habit with us to be "cussin' out" the governments under which we live, and which give us all these things.

We are not really discontented. We are merely exercising our right of free speech and criticizing the institution, when we should be using our right of suffrage to put into office men who will carry out the spirit of that institution.

But most of all we need a keener and deeper sense of gratitude for the blessings which are ours. Let us have thanksgiving and appreciation for our great good fortune; good fortune which has been ours for so long that we forget to appreciate it.

Thousands of Women Work As Sailors in the Soviet

(From The Boston Post)

The extent to which women in Russia are following the sea as a career is evidenced by figures published in Moscow placing the number of women sailors working aboard Soviet ships at 3,800. The women fill every sort of position, from being cooks to working in the engine room or holding forth on the bridge. Moreover, 21,974 women are employed on river boats, many of them being captains of the small craft. In the field of aviation, Russian women are also playing important roles, especially as parachute jumpers. This is all arduous and in many instances unpleasant and dangerous work. Not many American women will envy them.

To-day's Stocks

Includes Aldermac, Augite, Base Metals, Beattie, Bidgood, Bobjo, Bralorne, Broulorn Porcupine, Buffalo Ankerite, Canadian Malartic, Central Patricia, Castle Tretheway, Coniagas, Coniaurum, Dome, Eldorado, Falconbridge, Gillies Lake, Goldalce, Hardrock, Hollinger, Howey, Hudson Bay, International Nickel, Kerr Addison, Kirkland Lake, Leitch, Lake Shore, Little Long Lac, McLeod Cockshutt, Macassa, McIntyre, McKenzie Red Lake, McWatters, Mining Corporation, Moneta, Naybob, Nipissing, O'Brien, Pamour, Paymaster, Pickle Crow, Pioneer, Premier, San Antonio, Sheritt Gordon, Sullivan Consolidated, Sudbury Basin, Sylvanite, Siscoe, Teck Hughes, Waite Amulet, Wright Hargreaves.

Globe and Mail: Berlin press claims Germany has "staked out" a vast territory in the Antarctic. Another easy acquisition, but not a world-shaking event. The neighbours have not protested.

Sudbury Star: According to the newspapers, we read of a woman of 70 who wants a divorce because her mate, 82, dislikes bridge. Often we wonder: Are these October-December romances advisable?

Moneta Mines Has Net Profit \$467,325 In First Year

Average Recovery \$18.16 per Ton on 175 Tons Daily.

Toronto, May 24.—Annual report of Moneta Porcupine Mines for the year ended March 31, 1939, which covers the first full year's operation, reveals net profit of \$467,325, or 18.3 cents per share on the 2,543,860 shares outstanding. In the previous year, when mill operated only three months, net was \$133,769, or 5.2 cents per share. Earnings met dividend requirements of \$228,947, of which \$76,316 was paid April 15, by a margin of \$238,378, which was added to earned surplus and brought that account up to \$372,147.

Balance sheet shows current assets of \$658,401, taking bonds and stocks at book value of \$356,764 (market value \$349,809), while current liabilities were \$133,516, leaving working capital of \$524,885, compared with \$224,622 at end of previous year.

President's Report The report of W. E. Segsworth, president, says that, as this is the first report covering a full year's operation, it is interesting to know that total production was \$1,022,456 and that operating expenses were \$440,569, leaving operating profit at \$581,887. From this amount, deductions were \$100,408 for preliminary development and depreciation, and \$22,618 for taxes, leaving net of \$467,325 after adding \$8,465 sundry income.

He says he sees no reason why dividends at rate of three cents a share quarterly should not continue for some time to come. The current asset condition of the company is considered satisfactory, with ore reserves maintained at slightly higher figure, though of somewhat lower grade. The ore occurs on a fractured contact of lava flow, persisting over a considerable part of the company's 320 acres, of which but a small part has been explored. Ore bodies are in lenses recurring both along strike and down the dip. Several such lenses have been developed, and others are reasonably expected, giving confidence for the future of the mine.

The report of J. D. Barrington, mine manager, shows that during the period 80,320 tons of ore was hoisted, and 56,288 tons milled for an average of \$18.16 per ton. Waste rock handled, 24,032 tons, was used as back fill or stockpiled for future such use. Ore hoisted comprised 14,439 tons from surface dump, 6,063 tons from development and 29,455 tons from stopes.

Development, which included 8,240 feet of crosscutting, raising and drifting, 40,783 feet of diamond-drilling, was carried out on the 275, 400, 525, 675, 825 and 975-foot levels, all confined to exploration along the main ore zone, sufficient new ore being discovered, particularly to north of the main orebody, to maintain reserves at last year's level. Results, however, on the 975-foot level were disappointing, values being below economic limit. Favorable geological conditions persist, and deeper work must decide whether similar ore occurrences can be found.

Ore reserves are placed at total of 182,279, averaging \$19.53, including 179,450 tons, averaging \$19.49, in place, and 2,829 tons broken averaging \$22.21. During first three quarters of the year daily milling rate was 150 tons, increased to 175 tons in last quarter. Ultra fine grind is necessary and a change-over to flotation-cyanide process was made on Sept. 10, 1938, resulting in marked improvement in recovery.

Costs are given at total of \$7,793 per ton on 56,368 tons milled, including development, \$2,925; mining, \$2,216; milling, \$1,906; administration, \$0,512, and bullion marketing, \$0,234.

Capital expenditures in the way of alterations in mill circuit, which cost \$11,092, came to total of \$36,936, from which was deducted \$1,500 received as refund from Hydro-Electric Power Commission for cost of transmission line.

O'Brien Mine at Cobalt Doing Exploratory Work

Cobalt, May 25.—(Special to The Advance)—The O'Brien Mine, Cobalt's chief industrial mainstay, and which in recent years has concentrated almost exclusively on the Cross Lake section of its holdings here, is doing some exploratory work on the older part of its property. At a point near the separate school which was destroyed by fire in 1926, a diamond drill has been set up, and the plant, capable of handling more than a thousand feet of drilling, has been linked with the nearby air line and the Cobalt municipal water system. Scene of the operations is an area not hitherto touched at the O'Brien and is close to the Nipissing line.

The drill is being driven into rock on one side of a slight elevation in the ground at that point, within a short distance of the mine office building, but on the other side of the Kerr Lake road. O'Brien has three shafts within close reach of the ground now being examined and Nipissing workings are no great distance away. The drill is running within a few hundred yards of the old Right of Way mine, where Cobalt Properties are pumping out the workings preparatory to starting underground operations. On the 143 foot level a dam has been completed to control water from the adjoining La Rose mine and facilitate the projected drive into the Cobalt Lake workings on the other side.

No Clue Yet to Identity Of Cobalt's Hold-up Men

Cobalt, May 25.—No clue to the identity of the two men who allegedly held up and shot John Robitaille, Cobalt hotel beverage room attendant last week, has been uncovered by the authorities, police who have been investigating the circumstances said yesterday. A number of reports were enquired into and shown to be without value and two men picked up on suspicion in Kirkland Lake and brought to district headquarters of the provincial police at Haleybury were found to have had no connection with the affair. In addition to these activities, a number of points in this district were visited by police, but also without result.

St. Mary's Journal-Argus: Another American prominent in the public eye, turns out to have had Canadian ancestry. Walt Disney's father was born in Morris Township, in our neighboring County of Huron.
