Do Mining Engineers Get Into Heaven When They Die

· A Canadian engineer last week contributed the following to "Grab Samples," the happy column in The Northern Miner ::-

A Queens mining graduate, having laboured long and faithfully at his profession went down the shaft once too often and as a result speedily presented himself at St. Peter's gate, seeking admission. St. Peter, learning Friday says:his profession, sadly shook his head and remarked that, for various reasons which he hesitated to mention in full detail, mining engineers were not allowed in Heaven. For one thing he said, the sight of so much gold, silver diamonds and sapphires drove the engineers mad and they had several times attempted to mine the whole show as a mass operation. Heat for smelting they had told him was available not very far below and labour could be conscripted from "The Pit" Another objection to engineers, the gate-keeper reported, was the effect their presence had on the general social tone of Heaven. The fraternity he regretted, were always causing trouble of one kind or another, criticizing the angels, the musical quality of the heavenly choruses, the fit of their own wings and the shape of their harps, trying to make potent brews out of the celestial vegetation. They wanted to sing such songs as "Sweet Adeline" on Saturday nights. In general, St. Peter remarked, mining engineers were not acceptable.

Peering wistfully through the grill of the gate the Quens man spotted K.C., M.P. Recently Irvin Porcupien ium, euxenite, pitchbende, tantalite, a McGill and a Toronto S. P. S. graduate hobnobbing inside, two old pals of his in the terrestial mining fields. He pointed them out to the gatekeeper triumphantly. "There" cried, "are two mining engineers. I 2.000,000 shares to Paul T. Mulliette, School, and Eric Arnott and Robert knew them well." St. Peter turned, looked them over and then replied: "Those two? They are not mining engineers. They only think they are.

The tale can be twisted in any one of three directions, to align with educational background of the teller.

Making Arrangements for Financing Porcupine Relief

Adding to the pronounced activity which has followed the successful Brown, K.C., director, and W. B. Mcoperations of Pamour and Halnor in the northeast section of the Porcupine area, arrangements are now being made for financing of Porcupine Reef Gold Mines, lying west of the producers with a few claims intervening, main mineralized zones, trending Recently, United States interests pro- slightly north of east, have been idenvided \$100,000 for development of the tified on surface, with another iron property of North Whitney Mines, ly- banded zone, traced for several huning to the north and west of Pamour dred feet, carrying sulphides which par the arrangemests being made by William E. Smith of Tironto, who has now become interested in similiar efforts tion. Many porphyry exposures are for Porcupine Reef. It is expected found on the ground. that surface work and diamond-dril ling will be under way before the end fined to No.1 vein, which, with a branch of this month.

Consideration Given to Request of Cobalt Camp

In reference to the delegation recently visiting Ottawa on behalf of the Cobalt camp, the Haileyburian last week says:

Members of the delegation of six Cobalt citizens who went to Ottawa last week to present their arguments for a government guaranteed price of 50 cents an ounce for silver mined there and in Gowganda, returned nome at the week-end and repolled they had received close consideration from two members of the MacKenzle King government they met and that an answer to their request might be looked for within two weeks.

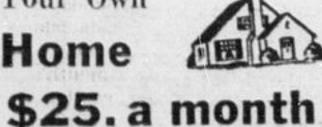

"The deputation was received by Hon. Norman Rogers, Minister of Labour, and Hon. J. L. Ilsley, Minister of revenue, with whom the members were closeted for an hour and a th ecamp for some time. half while they went over the problem carefully and exhaustively, it was said. The problem of employment and relief was stressed, it is stated and the necessity of immediate action urged in view of the announcement from O'Brien of an impending shut-down

"The Minister considered the question from all angles and said the request would have to be taken up with the full cabinet at its regular weekly gathering parobobly later this week. A decision might be expected soon, it Radium Find Reported was stated.

"Members of the delegation, who were accompanied by Walter Little, M P., were Mayor H. W. Rowdon and Councillor Ambrose Murphy of Cobalt Reeve Harry Buckler and Councillor James Price of Coleman township, with W. M. Shephard, township clerk, and Eddie McDonough of Cobalt Products Limited.

Capital from United States for the Irvin Porcupine

Promising Property in Southern Section of the Porcupine.

An article in The Globe and Mail on

"Accentuating the widespread public interest that has recent'y been turned toward the south part of the Porcupine gold belt comes word that Irvin Porcupine Gold Mines, financed entirely in United States, has let contract for 5,000 feet of diamond drilling to Ryan Diamond Drilling Co., of Timmins, and that this work is to be carried out immediately under direction of Hamlin B. Hatch, consulting engineer for the company. Cash to cover the contract has already been placed in a local bank and will be followed by such funds as may be necessary to carry out the recommendations of Mr. Hatch following completion of the drilling. "The company's property consists of

seven claims, a short distance northeast of Faymar and directly east of Hollinger holdings which lie south of Buffalo Ankerite. Its history goes back to 1909-1910, when some preliminary work was done under direction of William Powell Later McKenzie Porcupine Mines was formed to work the property and at that time two of the largest contirbutors were the late Charles Irvin, of Canada Cement Co., and Arthur Slaght, out the rock were said to show uran- Quebec Mines Laboratory Gold Mines was formed under Ontario columbite, zircon and titanite. laws with capital of 3,500,000 shares, or which 1,000,000 shares were issued to vendors and 2,500,000 placed in the treasury. Options were granted on conditions warrant.

Ward Irvin of Chicago, son of the late Group and will be two weeks at the Charles Irvin, who is vice-president of camp the company, and Blodgett Priest, of New Jersey, son of the lateJudge Priest Other officials of the company are John F. Boland, secretary-treasurer; Stewart Pherson, K.C. director, all of Toronto.

"The property has long been regarded as one of the good bets of the area and development will be watched with interest in the district. So far, four well, apparently cutting into No. 1 veir and curving in a northwesterly direc-

"Work in the past was wholly contrending more northerly than the main vein, has been traced for length of 6.500 feet. At a point near the west line of the property, No. 1 shaft was sunk to depth of 60 feet and No. 2 shaft close to the east line, or half a mile apart. In between, considerable trenching has beed done and in places shows free gold. Nos. 2, 3 and 4 veins lie south of No. 1 and have been traced approximately 1,200, 3,600 and 2,700 feet. In between No. 3 and No. 4 veins a large quartz cutcropping has recently been found, standing 25 feet above the surrounding terrain, about 30 feet wide and exposed for a length of 400 feet. No work has yet been done at this point, but it is understood that the outcrop will be explored by drilling early in the present campaign.

"A few days ago a showing of exceedingly rich ore was found on surface a short distance east of No. shaft on No. 1 vein. Reports from Timmins say that the specimens exhibited there were among the richest seen in

"No stock is being offeered in this market and Mr. Mulliette says none will be. All development work will be financed through his associatee in Chicago, New York and other points in United States. Buildings are already being constructed for accommodation of an adequate crew and it is the intention of the management to push the work as rapidly as good mining practice will permit."

Report of Placer

Expect Big Boom in the Area Next Spring, it is Said.

gested the possibility of a placer mining boom in that area in the spring. With all the the gold in the North there has been practically no placer mining, the commercial gold being in hard rock. There is known tobe gold in the Matheson sand plains, but it is not so certain that it is there in commercial quantities. Several years ago attempts were made to recover this placer gold, but the result was not very spectacular. Placer gold mining has been called "poor man's mining," but the Matheson sand plains did not prove much of a poor man's field, as one of the reasons for dropping the work was that it would cost too much for the necessary equipment to make this form of gold recovery pay. The late Neil Faulkenham, afterwards killed at Red Lake when some dynamite exploded as he was taking it to a place of safety, worked at least one season, and, perhaps, two on the placer gold in the plains near Matheson. He said that he recovered gold enough to make wages, but that was about all. The need for water and the quantity of sand that had to be "panned" to recover a small quantity of gold was what deterred him from carrying on his plans. His idea was that if considerable money were to be spent for slice boxes, and if other equipment were bought on a large scale it might be possible to make placer mining pay on the Matheson sand plains. While logic would suggest the presence of gold in streams and sand plains in the North, the facts do not live up to exptctations. Just as there were many who hoped that placer mining should prove profitable in this North, so there are many to-day who hold high hopes for the placer fields near Capreol.

One despatch from Capreol says that developed in that district, if present stakes for placer gold justify the hopes now held by their owners. C. C. Schreiber, of Kirkland Lake, is quoted as saying that 6,000 to 7,000 acres have been staked in the Capreol district by prosvalued by assay offices at from 60 cents to \$2.10 a yard, according to Mr. Schreiber. This is about double the value of the Matheson sand claims.

According to Mr. Schreiber one outfit has already ordered machinery and made the other necessary preparations to carry on placer mining. In case this firm, and some others equally enthusiastic, continue their present activities, a good percentage of the population of

Capreol will be engaged in the work next spring. It is claimed that the season is too late this year for successful placer mining, though to many it would seem that there is possibility for a coupublished Part C, of the 1936 Annual ple of months' work at least. Next Report. It is a 91 page, 10 x 61/2" book spring, however, it is expected that there will be great activity on these

"The gold fever," says one despatch, 'has invaded Capreol where talk of placer mining is the order of the day. While the gold fever is new to the nickel camp of the Studbury district, placing staking is the main topic of conversation these days."

Another despatch says:-"With the centre for about three-quarters of the world's supply of nickel just twenty miles away at Sudbury, Capreol residents hope gold will bring them similar wealth to that garnered by strikers near Denver where William Randolph Hearst's father struck a fortune more than sixty years ago."

Still another despatch hold of an interview with C. C. Sehreiber, the Kirkland Lake mine man chiefly responsible for the present special interest in the placer gold area near Capreol, Schreiber said he came to the Capreol area from Kirkland Lake a year and a half ago, and has been busy since then, as he expressed it, "to get things started." He said it was practically impossible to compare Kirkland Lake and the Capreol mining area, as one was hard rock and the other was a placer proposition. "While the strike in this area," Mr. Schreiber, is quoted as saying, "while it may not be as big as teh Yukon strike, it certainly will compare quite favourably with the gold panning in Denver, Colorada.
