#### TO SAVE COAL CHECK THESE POINTS

HOW TO GET MORE HEAT

Pipes and furnaces must be clean, and grates in good order. If one or two rooms are hard to heat, you are wasting fuel. A minor adjustment can probably remedy this. Have a competent man check your heating system, and make necessary repairs. Insulate your furnace and pipes when necessary.

HOW TO AVOID HEAT LOSSES

Storm windows and doors must fit snugly and be weatherstripped. Lack of storm windows can cause as much as 20% heat loss. Caulking should be done around windows, doors and in cracks in brick work (some hardware stores have caulking guns for rent). Broken glass should be replaced, and loose panes puttied. Small expenditures on such work will save much fuel.

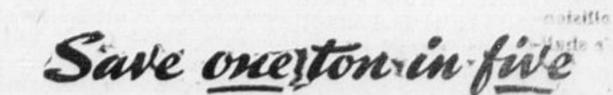

HOW TO SAVE STILL MORE

You can save fuel and money by having your home properly insulated. It is a proven fact that in many homes lack of adequate insulation (including storm windows) results in unnecessary consumption of fuel-up to as much as 50%. Watch for later instructions on how to fire your furnace properly:
