#### ON THE LAKESHORE

There is much activity down on Lake Superior where the water intake for our permanent water supply is being constructed. Canada Dredge and Dock Company have completed, for the time being, a necessary breakwater and are now excavating for the intake about 400 feet from shore. Work is proceeding on the clearwell into which water will flow from the 48-inch concrete intake pipe which will be buried ten feet below lake bottom. It is from this clearwell that water will be pumped through the 36-inch steel pipe to the Townsite and Mill.

#### WHO'S WHO AROUND THE JOB

FRED J. CARPENTER, NORTH AMERICAN BUILDINGS' MANAGER AT TERRACE BAY.

Our who's who this week is Fred J. Carpenter, Manager of the Terrace Bay Branch of the Winnipeg firm, North American Buildings Limited. Before we take a look at Fred, let's talk for a moment about North American Buildings. Back in '41, North American Lumber Company of Winnipeg, started to prefabricate houses and by '44 business had been expanded to a point where it was necessary to organize the subsidiary -- North American Buildings Ltd.

Since entering the prefabricated hous business, North American has handled a number of big jobs, including a 100 unit program for Manitoba Sugar Beet Company, units for Pine Falls, Department of Transport, Veterans Land Act in the greater Winnipeg area and other parts of Manitoba, as well as bunkhouses for C.P.R. Throughout their expansion, every effort has been made to engineer and build better houses faster and more economically.

Fred Carpenter was born and educated in Winnipeg where he graduated in accounting in 1929. In 1940, Fred joined the forces of North American where he worked for a time in sales and cost accounting. As business expanded, Fred took on responsibilities in production organizing on pre-fab units and when North American decided to establish a Terrace Bay branch to build houses for our project, Fred Carpenter was the man delegated to manage the job. He arrived here July 15th, 1946.

Since that date, under Fred's able guidance, a complete house prefabricating plant has been established at Terrace Bay, capable of turning out five houses per week. This plant utilizes modern machinery and production line methods, much the same as those by which many commodities are processed. Contrary to popular opinion prefabricated houses need not necessarily contain less material than a custom built house as is evidenced by the 89 houses which have been erected to date by N.A.B. at Terrace Bay. Variety in design and appearance can also be accomplished and we need only look down one of our townsite streets to realize that point.

Among his hobbies, Fred Carpenter lists duck shooting and golf, although latest rumours have it that fishing will soon become a phase of his off-time activities.

Fred was married in 1940 to Doreen Marion Burns and the Carpenters have a son, Bryan, age 6. All are Terrace Bay residents.

There must be a real measure of satisfaction for Fred Carpenter as house after house is erected at Terrace Bay by North American Buildings, whose methods in the field of prefabricated houses are a tribute to the organizing and engineering ability of that organization.
