

FIRE HAZARD IN THIS DISTRICT EXTREME

A match afire  
when you throw it  
starts a fire  
before you know it.

In a statement to the press earlier this week, R. Boulton, district forester, Port Arthur, asserted that the fire hazard in this district is extreme for the first time this summer and he urged everyone to take every precaution to prevent forest fires.

Staggering facts issued by the Canadian Forestry Association give some indication of the colossal loss of forest resources caused by forest fires in Canada.

6000 annual forest fires destroy an average of 400 million cubic feet of our country's heritage as 2,500,000 acres of woodland are obliterated. This represents a yearly path of devastation a mile wide all the way from Halifax to Vancouver and northward to the edge of Alaska.

REMEMBER 8 out of 10 Forest Fires are caused by human CARELESSNESS.

DON'T GIVE FIRE A CHANCE!
