

Most step ladder accidents are caused by defects in the ladder or by the climber losing his balance and falling. Here are some important suggestions:

1. Make sure the ladder has no defects.
2. Open the ladder wide enough so that the spreader locks itself in the fully opened position. Avoid step ladders having rope or chain spreaders.
3. Place the ladder on a firm level base; if blocking is necessary, anchor both blocking and ladder, or tie it in place.
4. Set up the ladder so that you reach your objective easily; never lean far out from a ladder in any direction.
5. Avoid standing on the top of a step ladder; use a ladder tall enough to let you stand at least two steps from the top.
6. Tools should never be left on a step ladder unless tool holders are provided.
