A \$2,000 EQUITY FOR YOU (Cont.)

the use of tools, machinery, electric power, chemicals and vehicles and the payment of rentals and taxes.

"The products of these mills must be packaged and shipped either to consumer or to secondary industries for further processing. The widening stream with its source in the forest spreads into such fields as building, chemicals, plastics, specialty goods, clothing, packaging, newspapers, movies, explosives, insulating, railroads, mining, shipping, communications and recreation. Indeed, it is almost impossible to name any product or service which does not depend in some way on wood.

"As well as being your personal investment and a foundation of industry, the forests of Ontario shelter our wild animals and provide protection for our fishing lakes. Our thriving tourist industry is dependent to a great extent on the forests.

"It is the job of the Department of Lands and Forests to protect and increase your forest investment. To do this, we need your interest and co-operation. You can make a good start by being careful. Would you burn down your own house? Do you use ten dollar bills to light your cigarettes? Not likely, but carelessness in the bush is exactly the same thing. Man, you're destroying your own property!

"So give us your help and one day you will be part owner of about 80 million acres of the best managed forests anywhere."
