MAINTENANCE OF LAWNS

For some reason this past winter has been hard on many lawns in the townsite and no doubt the question presents itself to many as to the best way to repair the damage.

The time to do a job on the lawn in this country, because of comparative coolness, is from now until the end of August. It has been found that seeding in the Fall is not successful.

A good method of reseeding is as follows:

Prepare the soil for seeding by raking it down until all dead grass is removed and top soil well loosened. An application

(Cont. on next col.)

MAINTENANCE OF LAWNS (Cont.)

of fertilizer is advisable at this stage, wetting down thoroughly and leaving for a week before planting the seed.

To plant the seed, first loosen the soil, and after sowing, a light rolling is desirable. A moderate wetting down will take the place of rolling.

It is essential that a newly sown area be kept moist during the period of germination.

Don't oversow. A pound of seed is sufficient to cover an area of 225 sq. feet (i.e. an area of 15 ft. by 15 ft.)

In using fertilizer the same precaution should be taken. Four pounds is sufficient to do a job on 225 square feet.

Grass seed and fertilizer may be procured at the Company Warehouse at cost.

HEADLIGHT CLINIC

This coming week, on Wednesday, June 13th and Thursday, June 14th, the Terrace Bay Kiwanis Club would like to have all car drivers check their headlights for correct alignment at their headlight clinic at the Terrace Bay Enterprises garage. On each of these nights there will be four Kiwanians available to quickly make any necessary adjustments to headlights which may be out of alignment. If it is impossible for these amateur mechanics to adjust your headlights correctly, they will so advise you and you can take your car to a trained mechanic.

This clinic is being run in the interests of highway safety; it is free; it will take only a few moments. If you are on shift, have someone else bring your car in for adjustment.

For best results, we would suggest that you have normal weight in your car - gas, oil, water and spare tire, with your tires uniformly inflated to correct pressure.

The Date - Wednesday or Thursday,  
June 13th or 14th.

The Hours- 7:00 to 9:00

The Place- Terrace Bay Enterprises garage.
