BASS

TRACK AND FIELD CLINIC (Continued Fr. Page 8)
thoughts on Track and Field - first that it was not an easy sport and secondly that all participants should keep an inquisitive mind about all phases of Track and Field, jumping, running and throwing. Though they had advised them in the best methods known today, these methods could and would be improved upon and they should study themselves and in their practicing, find their own method. He suggested they watch an animal run and try to imitate their movements which were superior to our own. Each girl or boy, as an intelligent athlete, must try these and investigate them. He cautioned them to train a little every day if they intended to become a good athlete. Those who became all fired up then quickly petered out were not fair to themselves, nor to their coaches who had given of their time.

Mr. Phillips closed by encouraging them to aim always on becoming a world champion for if they really wanted to be a good athlete, they would become a good athlete, repeating to be inquisitive in athletics and use their brains, it too was a muscle.

Following the Banquet the Legion sponsored a dance at the High School Auditorium.

DEPT. OF LANDS AND FORESTS (Geraldton)
TIMBER

During the past two weeks, Professor Hosie of the Faculty of Forestry, University of Toronto, has been travelling with Kimberly - Clark Pulp and Paper Company staff on their licence. Our Department foresters have been freely invited to spend as much time on these trips as possible, and have benefitted greatly from Professor Hosie's experience.

Present operations, old cut-over areas, plantations and other regeneration projects were assessed to find out the success of past treatments, the probable success of planned treatments and to consider any possible alternatives to improve the regeneration and the future tree crop for cut-over areas.

We appreciate very much the opportunity Kimberly-Clark Pulp and Paper Company and Professor Hosie have given us to take part in the discussions of the many problems in silviculture and forest management.
