

New Shell product can end body rust!

How? Because Shell Endrust is pliable, and sticks like glue. It will not crack. Or chip. Or bubble.

Flexible Endrust stays put

Shell Endrust Undercoat is the happy solution. It is not rigid — but it **does** stay put. It forms a thin, flexible shield that clings like glue to any metal — clean or rusty — once it has been cleaned.

Endrust goes "rubbery", but it never actually hardens. When the body metal twists, the Endrust Undercoat twists with it.

How does Shell Endrust Undercoat work?

Like the old undercoatings, Endrust is sprayed on. But the resemblance ends there.
