Penalty Leader SUSAK - WAWA - 25 Minutes.

THE TEN COMMANDMENTS OF SPORTS

- 1 - Thou shalt not quit.
- 2 - Thou shalt not alibi.
- 3 - Thou shalt not gloat over winning.
- 4 - Thou shalt not sulk over losing.
- 5 - Thou shalt not take unfair advantage.
- 6 - Thou shalt not ask odds thou art unwilling to give.
- 7 - Thou shalt always be willing to give thine opponent the benefit of the doubt.
- 8 - Thou shalt not underestimate an opponent or overestimate thyself.
- 9 - Remember that the game is the thing, and he who thinks otherwise is no true sportsman.
- 10 - Honor the game thou playest, for he who plays the game straight and hard wins even when he loses.

LANDS AND FORESTS - TIMBER - (Cont'd from Pg.1)

Chemicals in the ground and air are utilized to promote growth and to sustain life. These things are essential to the forest, just as the forest is to the paper mill in order to "stay in business". To ensure the continued productivity of our pulp and paper industry,

which has a very great influence on the economic prosperity of Canada and its population, it is necessary to promote productivity of the forests. For we realize that, in spite of appearances, the mills would not continue to function for long without the guidance and controls that are provided by human intelligence; neither can the forests continue to support such a vital industry without sound management.

Although, unlike many other natural resources, this one is renewable, it can just as surely become depleted, or for all practical purposes destroyed. Neglect towards proper management practices and poor utilization policies can effect the same disastrous results as they would in any industrial complex.

To protect the entire structure of this source of economic wealth, pulp and paper, it is necessary first of all to protect the foundation - the forests. Only sound forest management plans can assure that this foundation will remain firm. Maintenance is an essential consideration in dealing with the raw materials, as it is in running the complex machinery of the industry. As long as the forest resources are being utilized, it cannot be assumed that their perpetuation is a perfect system of automation. Here too assistance, guidance, and controls are necessary to assure quality, quantity and continued productivity. We must all be concerned with this objective, as we are all either directly or indirectly affected.

In a public building... a theater, store, at work, at school, a hotel... it may happen to you.

A scream or smell of smoke can create PANIC—a crushing rush for safety that can block your escape. Keep "cool"!

Avoid the crowd, look for alternate Fire Exits. If smoke thickens, stay low, close to the floor. If lights go out, follow along a wall till you feel a doorway. If your escape is blocked, close doors behind you to hold back fire—lean out a window. WAIT FOR RESCUE... jumping from upper floors is a risky last resort.

DO YOU CHECK FOR FIRE EXITS IN BUILDINGS
