If we say nothing more than this about Philips Automatic Color Television, we've said plenty: **AUTOMATIC!** Philips' engineers have taken the guesswork out of color television. This exclusive, new color chassis has more features built into it that make color TV a pure pleasure than any other we know of. Fine tuning, for example, is a simple one, two, three operation — just push a button, fine tune 'roughly' — release the button and the picture will actually snap into perfect tune! Other Automatic Features include the Degaussing Circuit, to keep colors pure; "White" Compensator for strong black & white pictures; Vertical/Horizontal holds prevent flops and tears; Voltage Regulator; Contrast Compensator to prevent washing out of colors. It's so automatic you'll have to see it to believe it!
