IMMUNIZATION PROGRAM AGAINST GERMAN MEASLES - RUBELLA

The Thunder Bay Health Unit - starting June 1st, 1970 - will be conducting an immunization program for all children in grades one and two throughout the area covered by the Unit.

The purpose of this program is to reduce the number of cases of German Measles which may, in turn, break the chain of transmission that leads from children to women of child bearing age. Contracting German Measles during the early months of pregnancy can produce undesirable effects in the unborn baby.

Immunization will take place at the local schools and consent forms are being sent to parents.

For more information contact the Thunder Bay Health Unit.

SCOUT ORGANIZATION PERFORMS TOWN CLEAN-UP CAMPAIGN

On Saturday, May 9th, the combined forces of the Cubs, Scouts, Venturers and Leaders participated in a town clean-up campaign. About sixty-five members of the Scouting organization started at 12:30 p.m. to clean up public property, parks, streets, etc. The town was split into ten areas with a team and leader for each area. The teams were moved around as required to help out in critical areas.

Kimberly Clark Pulp and Paper Company Ltd. assisted by supplying the Scouts with a truck and necessary tools and equipment. After a very successful clean-up the boys held a weiner roast in front of the Scout Hall where little trouble was encountered consuming twenty-one dozen hot dogs.

LONGLAC SAWMILL TO OPEN JUNE 24TH

A \$1 million sawmill, one of the most modern in Ontario, that will help stabilize regional employment and forest utilization, will be officially opened here June 24th by Lands and Forests Minister René Brunelle.

Longlac, 200 miles north-east of Thunder Bay, is the northwestern Ontario woods headquarters of the Kimberly Clark Pulp and Paper Company.

Announcing a day-long program to mark the official opening, G.L. Carruthers, President of Kimberly Clark, said the fully-automated chip and saw mill will operate on a year-round basis producing 20 million board feet of lumber and 16,000 tons of dry chips annually.

The mill will create employment directly for about sixty persons and an additional thirty-five will be employed in timber harvesting and hauling operation to supply the mill. This yearly payroll will total about \$700,000. For more than twenty years Kimberly Clark here has employed many Indians in its woods operations, including the new mill.

"This plant," announced Mr. Carruthers, "will utilize about 40,000 cords of logs each year, mainly spruce and jackpine, and thus will permit Kimberly Clark to use more effectively the forest resources on our Longlac management limits, which, we are proud to say, are recognized among the best managed and operated in Ontario."

The new mill, replacing an out-dated one, was built with financial assistance from the Ontario Development Corporation. Regional representatives of the Ontario Federal governments, and senior officials of the provincial government, along with officers of the Ontario Forest Industries Association, and representatives of the business community and
