

time boat builder naturally has a few areas of apprehension. What type of plywood do I buy? How do I bend it? Do I glue the joint, or should I use seam compound?

Because plywood is so easy to use in boat building, and because home boat building is becoming increasingly popular, the Council of the Forest Industries of B.C. has a special publication to assist first time boat builders. "Building Plywood Boats" is an addition to CFI's popular Ply*Plan series. While others in the series have presented a specific plan with information and drawings, "Building Plywood Boats" is the first Ply*Plan giving general information and useful tips only. No matter what plywood plan is used, the amateur boat builder will find "Building Plywood Boats" a useful and practical guide.

The Fir Plywood Boat Plan Catalogue and the Ply*Plan "Building Plywood Boats" are both available at local building supply dealers. A winter work project can be next summer's pleasure by building a plywood boat.

Sand fir plywood in the direction of the grain only, and avoid heavy sanding. For reliable performance and long life, use plywoods marked PMBC EXTERIOR. Glues used in PMBC EXTERIOR are 100% waterproof.

'Tightwad' Comic Has Heart of Gold

EVEN TIGHTWADS must turn generous when it comes to the battle against heart and blood vessel diseases, says Jack Benny, who more than 20-years ago helped raise more than a million dollars for the first Heart Fund Campaign. Still a "young" 39, Jack urges everyone to send a big check to this year's Heart Fund Campaign.

GIVE ... so more will live HEART FUND

a new way of life

If you want a new way of life without leaving your own home, look into the many ways plywood can help you to alter and improve your present life style. For more space, an updated appearance, or simply for more comfort and convenience, plywood is most often the solution.

Because it is strong and rigid plywood adds strength and reduces nailing on most jobs. It's convenient size and light weight make it easily handled by one man and plywood is available in sanded and unsanded grades to meet every need. In addition PMBC EXTERIOR plywoods are manufactured with waterproof glue bonded under heat and pressure. Douglas fir and western softwood plywoods bearing the PMBC EXTERIOR edge-

mark will stand up to extremes of climate and use.

Sanded plywood is available in grades for fine cabinet work or grades to provide a smooth floor underlayment. Unsanded plywood is the quickest simplest way to enclose a new addition or build a new house. Plywood with a tongue and groove edge is best for roofs and floors where the tongue and groove can reduce costly and time consuming edge blocking.

Probably the greatest advantage of plywood is its versatility. From simple bookshelves through room remodelling projects to house additions, PMBC EXTERIOR plywoods can help you to something new and different. Look at the many ways plywood can help to change your way of life without leaving your own home.

WE'LL SHOW YOU HOW TO SAVE INCOME TAX DOLLARS

You can save tax dollars by investing part of your income in a registered Retirement Plan. You can deduct registered investments from taxable income. Then you can look forward to a much larger retirement income - partly paid for by tax savings.

District Manager
M. K. Morrison
will be at
The Terrace Bay
Motor Hotel
Tuesday, Wednesday
& Thursday of each
week during March
and April.
