SUNDAY SCHOOL - 10:00 A.M.

WORSHIP SERVICE - 11:00 A.M.

EVENING PRAYER - 7:00 P.M.

## Boiler-Start-Up - cont'd from page 1 .....

that the mill has, in fact, had effluent treatment for more than 20 years, Mr. Haycraft pointed out.

"As regulations become more strict we will have to provide further control, but we face the same economic difficulties as many other pulp companies," he declared, adding that the company is in a loss position this year for the first time, and has been obliged to cut back in its operating costs. He blamed the falling off of price levels and the continuing escalation of freight, labor and other costs.

"We are, however, convinced that markets will improve, and that our operations are sound; and we look forward to a long and healthy future for both mill and woodlands", he stated.

Referring to his companies' contribution to air and water pollution control, Mr. Haycraft noted that Kimberly-Clark Pulp and Paper Company Limited, and Kimberly-Clark of Canada Limited had spent approximately \$2.7-million in this field from 1965 to 1970, and would be spending an additional \$2.5-million between 1970-'73.

He indicated that Ontario's pulp and paper industry has spent in excess of \$60-million on pollution abatement since 1960, has reduced suspended solid losses by 66 per cent, and at the same time, increased production by about 11 per cent.

Much has yet to be done in this field, Mr. Haycraft stated, but said it was impossible at this time for the industry to finance expenditures amounting to more than \$200-million to meet the air and water pollution objectives of Environment Canada.

"Incentives must be provided by government if this work is to be done," he declared, adding that "realistic time schedules must also be established to strike a sound balance between pollution control expenditures and expenditures necessary for the survival of the businesses."

He observed that both federal and provincial governments appear to be aware of these difficulties and are seeking ways to assist in striking this balance.

In predicting the future for pulp and paper, Mr. Haycraft said it appears the supply and demand situation will be corrected within the next couple of years.

"Ontario's pulp and paper industry will certainly be in a much better position to solve some or all of the problems as markets return to normal," he told his audience.

All Canadians are not compelled to know both their country's languages and many Canadians speak neither correctly - but the advantages of some knowledge of both are enormous.
