 6:00- 7:00 Peewee Practise  
 7:00- 9:00 Public Skating  
 9:00-11:00 Intermediates

**WHAT CAUGHT MY EYE**

- By Ray Shank

Did you ever consider living forever, or, as they call it, immortality? Well don't, it's not worth it!

Since 1967, between 15 and 25 people in North America have apparently given it a try. The idea is that once you die, you are put into a liquid nitrogen cylinder and are frozen. These cylinders will keep your body frozen at roughly 200 degrees below zero. Once your body gets that cold (they go as low as 320 below), it won't deteriorate any further and it will keep indefinitely.

The idea behind it all is that, someday, someone will find a cure for whatever disease you died of, and, once thawed out, you can be cured and restored to live a normal life again.

Of course getting frozen costs money. First, it costs \$30. a year just to belong to the society that arranges this \$8,500 for the initial freezing . and \$1,000 a year to maintain it.

And since everything keeps going up nowadays, you can count on that freezing fee going up in future years.

There are many catches to the idea.

First, how can you be sure that your descendants will keep your remains freezing? Even if you paid the initial fee - \$9,530 - it could take doctors a long time to get around to you, and your disease. cont'd pg. 7...
