

MINERAL CLASSES

E.B. Freeman, B.A.M.Sc., of the Ontario Division of Mines, who conducted a class in Mineral Exploration, was gratified by the interest shown in the attendance at the evening classes in St. Andrew's Church hall.

The general purpose of this educational program is to provide a short geological course with emphasis on common minerals and rock types, economic minerals, types of ore deposits, a review of recent developments in the mining industry, case histories of mine findings, the importance of the mining industry, etc.

It is also designed to instruct people on how to stake claims and the assessment work requirements of the Mining Act; give information regarding the services and publications of the Department, display identified specimens of rock and minerals, teach bush travel mapping and instrument techniques, handling of explosives and to contribute to an understanding of the world in which we live - the geological processes that have shaped it in the past and are shaping it in the present.

And, to maintain the traditions established in 1894 by the first Provincial Geologist who spent much of his time giving lectures similar to those presented by Mr. Freeman and others.

Mr. Freeman offered free rock samples, free literature on his subject and showed four films, and with four years experience in this area, easily captures his audience's attention in the six lectures which comprises the course

David Mercier (left) and brother Kevin (right) study rock samples with E.B. Freeman, lecturer. Photo by I. McCuaig.

Mr. Norman Bottomley in his Bush-wagon -- a genuine 'Do it Yourself' accomplishment, made without plans, but ingenuity. Using an old, old Volkswagon, this triumph for bush travel has proved most successful. Mr. and Mrs. Bottomley have a camp at Bear Lake and it is used the year round, for fishing and hunting forays and this latest addition to their car and snow machines, has proved a great acquisition.
