## How many energy leaks are there in your home?

At one drop per second, a dripping hot water tap can waste about 175 gallons of hot water each month. The electricity required to heat that water would keep a 60-watt bulb burning continuously.

Poor insulation...a faulty heating system...inefficient use of appliances...all cause energy leaks in the home. This can increase the cost of running a home—and waste Canada's precious energy resources.

It makes good sense to use electricity and all forms of energy wisely. And that includes stopping those energy leaks.
