THE MCCAUSLAND HOSPITAL "QUOTES"

The regular meeting of the Board of Governors of the McCausland Hospital Board was held in the Schreiber High Campus on September 16, 1975. The President opened the meeting stating that our Director of Nursing did not as of yet have a place of her own to live. The Board would still continue to look into possibilities.

Re the laboratory, Dr. Lone, Chief Pathologist at Thunder Bay, informed Mrs. McEwen he could take in a person we have chosen and train them as laboratory assistant. He stated a two week course, then back to the hospital here and work for a short period and find your weak spots, then back to Thunder Bay again for two weeks. Dr. A.B. Adey mentioned at this time that their nurse's work was taken up by X-Ray and lab and she had also resigned due to the fact that there was no future left in her job.

Mr. William Houston inquired if a lab licence and lab technician were necessary and he was informed that this was the only way the Ministry would reimburse the Hospital for lab work.

It has been decided by the Board that Jan McEwen would attend the Ontario Hospital Association Conference in October in Toronto. Mrs. R. McAdam and Mrs. M. Puttock would attend the 2 day seminar of the District Health Council #12 in Thunder Bay this month. Mr. R. Wills and possibly the Director of Nursing would attend the Small Hospitals Conference in Sault Ste Marie this month also.

Re the Doctors new offices in the new Hospital, it was asked of the Board what rent they would have to pay as they were paying as much as they should be now. William Houston

AMBLYOPIA

"The earlier amblyopia is detected in children, the better the chance of preventing needless loss of sight" says Mrs. Charlene Cameron, Co-ordinator of the Ontario Mobile Eye Care Unit.

This Prevention of Blindness service to northern Ontario operated by The Canadian Institute for the Blind will be in Terrace Bay from October 6th to October 8th. The Unit's visit is sponsored by the Terrace Bay Kinsmen.

"The most common cause of amblyopia," she says, "is strabismus (popularly known as turned or crossed eyes). It also develops from a substantial difference in the seeing ability of the two eyes. If left untreated, this condition can lead to a loss of sight which cannot be restored.

"Treatment may include patching, glasses or in some cases surgery."

Some tell-tale symptoms are frequent rubbing of the eyes, shutting or covering one eye, bumping into objects on one side or an eye that isn't straight.

Arrange for a complete eye examination on the Mobile Eye Care Unit if you suspect that your child has either of these conditions. An appointment with the ophthalmologist can be made by phoning: Mornings - 825-3840 and Afternoons - 825-3776.

THE INVENTORS

Wing Commander J.G. Wright, of the Royal Canadian Air Force, invented a homing device, the patent rights of which are owned by the Canadian Government and on which royalties of over \$1,000,000 have been received from one firm alone.
