

CUT DOWN ON "DOWN-TIME"

Everybody's talking about cutting down on down-time, but International has done something about it.

The new TD-20E gives you more features, more performance, plus total—modular power train.

This means that now

whole components—steering/braking, transmission, torque converter, engine and final drive—can be removed and replaced in 9 hours or less. And you save hours, even days of down-time.

Just send the faulty components to the shop for repairs, while the mighty 20E Crawler Tractor keeps on with the job. Once again International proves that there is something new under the sun.
