CONGRATULATIONS

SUSAN

The Kinsmen Club of

Terrace Bay would

like to congratulate

SUSAN BOUCHER

of the Terrace Bay

Public School, the

winner of their

# Midnight choruses

Choruses of song birds are waking us very early these mornings. Spring is in full swing with leaves apppearing on the trees, long-legged moose calves awkwardly following their mothers and brilliant yellow marsh marigolds in full bloom. There is

also another chorus of song heralding spring. To enjoy it one must procure a flashlight, and attire oneself in warm clothes and rubber boots and head out into the wetlands at night. The singers are male frogs, who, like birds, vocalize vigorously to attract fe-

males and proclaim their breeding territories.

It's a woman's world out there in the swamps. A female frog chooses a male solely on the basis of his voice. A good voice, then, is as important for a male frog as biceps are to the human.

So just what does a lady frog look for in a male's call?

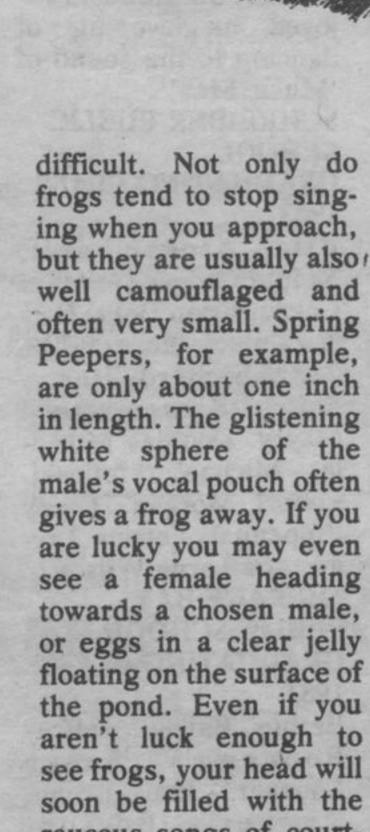

Females choose males of the same species, each species having its own distinct call. For example, Chorus Frogs have a call not unlike a thumb running over a comb; Spring Peepers make a high pitched "peep-peep"; Wood Frogs, a giggling noise; and Leopard Frogs, a moaning snore.

The length and pitch of the call also varies with temperature. Colder frogs have longer, lower pitched voices. If given a choice, females select males of about the same body temperature.

The gals don't seem interested in loud, quiet, hot or cold males. Since the guys voice gives no indication of body size, females are notable to choose larger or smaller males. A loud brawny suntanned male, then, has no advantage in the frog world. The most favoured males are those with the most average voices.

Should you go out to a pond at night, take a flashlight and look for the frogs that are calling. This may prove

sounds of the night. Pukaskwa National Park Staff

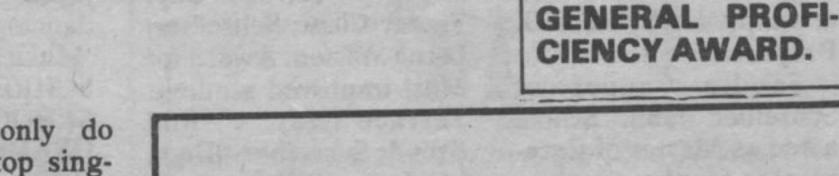

soon be filled with the raucous songs of courting male frogs and other

#### IN MEMORIAM

PETERS - In loving memory of a dear Mother, Mother-in-law and Grandmother. Annie who passed away June 24, 1982.

We lost a mother with a heart of gold, Who was more to us than wealth untold, Without farewell, she fell asleep. With only memories for us to keep, We have losted, but God has gained. One of the best Mothers, the world contained.

Lovingly remembered and sadly missed by daughter, Rose, son-in-law Grant and grandson Billy.

Canada's bountiful forest lands provide the base for the country's largest manufacturing industry: pulp and paper.

In recent years, attention has turned to the question of how Canada can produce an adequate supply of wood fibre so that it can maintain its present share and participate in the growing world demand for forest products. Spending on forestry by governments and industry has risen

sharply in recent years and much more is required.

Money is invested in protecting existing forests from the ravages of fire, insects and disease. It is invested in seedlings, and in thinning and fertilizing stands of timber. The investment pays off in more fibre per hectare.

To meet the growing competition in world pulp and paper markets, Canada needs more than modern, efficient mills. It also needs, and is developing bigger and better forests.

For more information, send for "New Challenges", a free booklet from Public Information Services, Canadian Pulp and Paper Association, Dept. 5, 23rd Floor, 1155 Metcalfe Street, Montreal, Quebec, H3B 2X9.
