Electric Tires Cost More Than Other Tires, but First Cost is Last Cost.

Electric Advantages.

The adjusting of the Electric Detachable Tire is a matter of the

utmost simplicity, They can be and are satisfactorily used on single piece light rims. Fitting perfectly true on the rims they cannot roll, and it is im-

possible to blow them off. They are very easily deflated and detached

They are so constructed that when fitted to the rim all the resilience is thrown into the tire and none lost in attachment.

It takes less than three minutes to deflate, detach, repair puncture and replace ready for use. Being an incorporated tire it is lighter than a cement made tire

and the rubber is less liable to come loose from canvas. It also wears longer and retains air just as long as any double tube tire. The special pebbled thread prevents slipping and renders them

much less liable to wear than a smooth cover. The tubes are specially manufactured and are of a velvet finish. They are round and perfectly air tight. Being made of pure gum they are always the same in all degrees of temperature.

Two years of experimenting with a perfect tire as the object point has given us a tire in our Electric Single Tube that we believe to be as near perfection as it is possible to make it. It possesses the resilience, appearance and wearing qualities of the Double Tube. The world's fastest 4-mile was made on this tire by Angus McLeod at Sarnia.

When submitted to actual test on the tire testing machine, the best makes of other single tube tires run but 700 miles, Electric Single Tubes over 3,000 miles; other makes of double tube tires, 900 miles, Electric Double Tube Tires over 3,000.

Our tires are all guaranteed by the most liberal guarantee and should there be a defect, no time is lost in making it good. Insist upon having your '97 mount fitted with Electric Tires. They cost more money but they will give you perfect satisfaction every day you ride
