Some Cyclone Talk.

Interesting Scientific Data Compile

"I've heard so many incredible stories about the cyclone and its eccentricities, \$25 00 said the solemn looking man to a party of 18 50 tourists he had joined in the sleeping car, "that I've been to Kansas making some personal investigations in the interest of

> "I find that many reports from that section have been grossly exaggerated. Nothing occurs there that is not in accord with our understanding of these terific outbursts of nature. For instance, the tornado often mistaken for the cyclone, has a rotary motion. I have known it to dip low enough to bore a well and then bound once more to the region of the clouds. This wonderful phenomenon was an accomplished fact in far less time than it takes me to tell of it.

"An extensive farmer there heard the roar of an approaching storm and just was read a first and second time and and round the immense tract till the grain was all out."

"But it blow away?" "Not at all. That would have destroyed our theory. The circular whirl of the irresistible power swept the grain to the center of the field and into an immense stack such as human hands could not

have piled. "One of the strangest but best authenticated incidents I learned of occurred where a cyclone struck the base of a mountain and went burrowing through it. A few feet in the twister encountered a solid granite formation. It was two weeks later when the tunnel was completed and the terific wind resumed its devastating way on the other side. The tunnel was promptly appropriated by a railroad company.

"I had rather an unpleasant experience in that section," said one of the tourists. "I bought a little farm there just to be a landholder. Everything in three counties was plastered thick with mortgages. A cyclone wound them all up into one great package and pasted them down on The solemn man of science never turned a hair, but took notes.
