

Teachers Institute.

The Ontario County Teachers Institute was held at Uxbridge on Friday and Saturday the 8th and 9th inst. The attendance was large and deep interest was manifested in the proceedings throughout.

President Nutting opened the first session by reading a passage of Scripture, after which the minutes of the last meeting were read and confirmed. The auditors' report was submitted by Mr. Gale of Whitby, and on motion was adopted.

PRESIDENTS ADDRESS.

Mr. Nutting, principal of Uxbridge public school, opened the proceedings proper by presenting the annual message.

The President in his address confined his remarks to the subject of Teachers Associations. He pointed out the two phases of the subject that demand our most careful consideration—the one being to improve the character of the work done by the teacher, and the other to promote the best interests of the teacher from a professional standpoint. He affirmed that in the past our efforts had been almost wholly directed to the former of these two aspects of the subject, and he thought it high time for us to consider that we owe a duty to ourselves as well as to the public. Regarding the first division on the subject, he intimated that it should be our aim to make the association as practical as possible. To this end a programme should be prepared dealing with subjects that present greatest difficulty to the teacher in his ordinary work, and if necessary resort should be had to aggressive means to promote discussion. Much of the monotonous character of association work is attributable to the fact that teachers will not take active part in the discussions. He also claimed that it was the duty of the association to examine, and criticize if necessary, departmental regulations regarding curriculum of studies, text books, professional training of teachers, etc. At present the program of studies for entrance covers far too much ground. This tends greatly to thwart the teacher in his efforts to give the pupil a thorough grounding in the more important subjects such as reading, composition, literature, writing and arithmetic. He would recommend the removal of history altogether, and a considerable reduction in the quantity of arithmetic for entrance work.

Regarding the second division of his subject the president stated that he had frequently heard teachers complain that not enough attention is being paid to the promotion of the social element. Members attend these meetings from year to year, without even making the acquaintance of more than a limited number of their fellow teachers. Much of the unfriendly rivalry and decidedly unprofessional spirit shown among teachers, in the matter of undermining and underbidding one another, which he was very sorry to affirm did exist, might be overcome by the development of a little kinder sentiment among the members of the association. The speaker next touched upon qualifications for entrance to the profession. He claimed, that grave wrong was being done by licensing an army of third class teachers every year, and would recommend that efforts be made to induce the department to discontinue the use of third class certificates. Superannuation Teachers Fund was next dealt with. It was claimed that the cutting off of this fund was decidedly against the best interests of the profession; and he thought it the duty of the associations, by combined effort, to make an appeal to the government with a view of having it re-established on a somewhat different basis. In conclusion the speaker recommended the appointment of delegates to the Ontario Teachers Convention both from the high and public schools, in order that we may keep ourselves more closely in touch with that body, and thereby get the benefit of its influence.

The chief points in the address were freely discussed by Inspector McBrien and Messrs Brown, Parks, McBride, Henderson and Waugh, and on motion the address as a whole was referred to Messrs McBride, Parks, Waugh, McBrien, Eddy and Gale as a committee to report at the next meeting.

VERTICAL WRITING.

Mr. Eddy, principal of Brooklin public school, was next introduced on the above subject. After explaining how it happened that he was selected to introduce this subject, the speaker said: To adopt any system of writing in a school without a careful study of the object of the author of such system seems useless. The advocates of vertical writing assume that all the writer requires is speed, legibility and economy of space presupposing that these ends are attained without the writer being affected adversely by having to write in an unnatural position. It is evident that the authors of this system were willing to sacrifice form in accomplishing these objects whenever form stood in the way. They recognized that writing is only the means by which an individual can convey his thoughts to others when distance, lack of printing offices etc, prevent him from doing so in any other way. Taking up these objects in order, experience and observation show that all rapid writers use a vertical stroke when writing. Though learning to write slant, rapid writers always use the vertical when time is an object. Legibility is so obviously on the side of the vertical system as not to require argument. Economy of space is also on the side of the vertical. It only remains to show that position is such as not to be unhealthful. All that is necessary to prove this point is to see vertical writers at work, side by side with those who write slant. The position of the first mentioned is natural, graceful, comfortable, and consequently healthful. The slant writers sit in a forced unnatural position.

Those who condemn the vertical especially that championed by "Newlands and Row," on the ground that they pay no attention to the joining of the different letters in a word should remember that always keeping the pen on the paper whilst writing each word means a greater expenditure of muscular force and is therefore not practical. This is a practical age, and business men require practical writing in their work. Reading fine slant is injurious to the eyesight, and we expect our writing to be read, not to be kept as an object of art to be looked at and admired for its beauty of form. Junior teachers all agree in saying that beginners invariably write vertically. Experience has shown that vertical writers can get greater speed. Indeed it is a matter of argument whether the vertical is not superior as a work of art. Comparing the two systems in all that the writer wishes to accomplish the vertical always proves its superiority. Lastly vertical writers can do their work at all times and places not being compelled to have a desk upon which to rest the arm in order to secure the so-called muscular movement. By placing the arm close to the side the writer can get the support necessary to have command of the pen or pencil when writing.

The discussion that followed was general and proved that all the teachers present are deeply interested in this important subject.

OBJECT LESSONS IN BOTANY.

Mr. Dent, science master of the Whitby Coll. Institute, was next introduced on the above subject. This was not only Mr. Dent's first attendance at the Ontario Teachers Institute but his first appearance on the programme, but the teachers gave every evidence of entertaining the hope that it is not the last time he will give them the benefits of his experience. Mr. Dent spoke as follows:

The chief claims of any object lesson may be considered as mainly three, viz: First, the Pestalozzian aim of teaching language by connecting word and idea. Second, the imparting of knowledge for its own sake.

Third, for their beneficial effect towards the general culture of the child. A little examination, he thought, would show that object lessons in Botany would come as near to realizing these aims in practice, as those in any other subject.

In the first place language teaching both in its earlier stages and for more advanced pupils might be advantageously taught by the use of plants and flowers placed in the hands of the pupils. In the second place there are many points which might be made clear by a series of simple object lessons in botany, a knowledge of which might be turned to practical account. Among these he mentioned the processes of germination and growth from the seed with the conditions favorable and unfavorable, and the effects of varying degrees of moisture and temperature; the simpler facts of the nutrition of plants with the necessity of renewal of soil, rotation of crops, nature and use of fertilizers; the methods of distribution of seeds, particularly of noxious plants; the identification of the commoner wild plants, with a simple study of their habits and modes of growth. These among many others would form a most interesting and instructing course. The practical application of these, he said, must be evident. Today is not the day of the ignorant and careless man. It is the day of an intelligent knowledge and understanding, not only of the arts but of the sciences which form their foundation. This is applicable not only to farming but to horticulture, floriculture and the simple processes of gardening. Of course most of what is learned of these must be learned practically and what is learned in school must form only the foundation. The great thing is to get the young to take an intelligent interest in these things, to lead them to investigate for themselves and not be content with stumbling on haphazard, without an interest in or understanding of even these simple facts of nature.

In the consideration of the third aim of the object lesson, viz: that of general culture, the subject of botany might be made of very great value. The training of the intellectual faculties of observation, judgment and reasoning would be greatly aided and developed under the most favorable circumstances.

By the interest aroused, attention would be ensured and since every act of attention involves consciously or unconsciously an act of volition, the will would indirectly be affected; and on the emotional side there lies in the subject of botany possibilities which are possessed by no other subject at present on the curriculum of the public schools. It tends towards directing the mind from the sordid cares of every day life to the grand facts of nature, whose works are spread so lavishly about us in this country which is second to none in the world. It would lead, though perhaps slowly and unconsciously to a broad general culture which is an object so much to be desired in any system of education.

Among the great men of the world we find the names of many who took a deep and living interest in the facts of nature, including the marvellously beautiful and intricate phenomena of the Vegetable Kingdom.

Of course it might be objected that little could be done in school, that results are small and unsatisfactory. The great thing is to start the child aright, to lead him to see the beauty and interest of the works of the Creator and to develop habits of intelligent and independent thought.

The address led to general discussion which was brought to a close only by the lateness of the hour. No doubt valuable results will follow the practical presentation of this scientific subject by Mr. Dent. The convention adjourned to meet again at eight o'clock.

EVENING LECTURE.

In the evening a large and intelligent audience assembled in the basement of the Methodist tabernacle to listen to Dr. McLellan's masterly address on "Literature and Moral Training."

President Nutting occupied the chair and was supported on the platform by Inspector McBrien and Ex-Mayor Harman.

The town orchestra was present and enlivened the meeting with several musical selections.

Dr. McLellan is a prime favorite not only with the teachers of the province but with all who delight to listen to an able man expound his views on the vital questions of life. The Doctor was in good form and for nearly two hours held the undivided attention of the audience. The doctor launched into his subject by declaring that some people think we are getting too much education. The farm and workshop were being abandoned not as some maintained because of too much education but because of too little education. Some ask for the old curriculum of the three R's, which means that no foundation shall be laid for natural development. These subjects are not tools, not education. Those who object to botany and kindred subjects object to the development of the brain and the senses. All who argue in this way argue against mental development. He who in the slightest degree lifts his hand against the high school and higher education is an enemy to his country. Our system of education consists of vitally relative parts and not a single part of our national system of education can be injured without injury to the whole. The high school are the lungs of our system. All we agreed that moral education should be the main end of all education. I development of character should be the aim of all teaching. Education is tri-une, a three-one development. There is something that thinks, it feels, that wills, and when united leads to action. The mind starts and the child goes on and on and on and until it arrives at the divine nature. It begins with unity and ends with unity. A man with intelligence without a loving heart is not a man. The man who follows the path of duty constant as the star is the true man. The development of manhood is constituted, the salvation of the world. Moral training should begin at home. Few parents are educated. At six the child leaves the parent his character has been formed. I mothers were educated we would revolutionize the moral condition of the country. Early impressions irradicable. Every day in the hold is a day of judgment. The child is an imitator, and also a reasoner. Home is an organized community the school is an organized community of larger growth. On the tea rests the larger share of the responsibility of moral training. It is the duty of the parent to co-operate with the school in moral training. Order, school develops moral character. S people say there should be no coercion in the home it is kindness to a child to let it have its own way. Every lesson should be a moral lesson as well as an intellectual lesson. The teaching of all subjects has a moral value. Literature contains all the elements of moral culture. It is a record of the best that has been thought and felt by human race. Literature is a revelation to the inner spirit of man of what is unseen. The doctor now gave several selections from the best authors show how literature should be taught with a view to moral training, eloquent and instructive address repeatedly punctuated by rounds of applause from the delighted audience.

Inspector McBrien in his happiest mood moved a vote of thanks to the Dr. Waugh of Whitby and carried amid applause. A pleasing selection from the orchestra brought the evenings entertainment to a close.

Concluded on fourth page.

How many young men and young women are sent to just as the future seems brightest and fairest of promise! They are taken away by the disease which causes over one-sixth of all the deaths in the world—the disease which doctors call consumption. There is absolutely no reason in the world why consumption should be fatal—why it should be even serious. It is a disease of the blood, and can be cured absolutely and always by purifying and enriching the blood. The only exception to this is the case where the disease has been neglected and improperly treated until it is stronger than the body—until the body has become so weak as to have lost the ability to recuperate. Dr. Pierce's Golden Medical Discovery will cure 98 per cent of all cases of consumption if used according to directions. It also cures all lingering coughs, bronchitis and throat affections. Send 31 cents in one-cent stamps to World Dispensary Medical Association, Buffalo, N.Y. and receive Dr. Pierce's 1005 pages COMMON SENSE MEDICAL ADVICE, illustrated.

Dr. G. OWEN, Riverside P.O., Toronto, Ont. Glasgow has decided to hold an international exhibition in 1901. Baby Beauty. You always think of a pretty baby as plump and chubby. Scott's Emulsion gives just this plumpness; not fat, just enough for the display to come. Babies like it, too.

Mr. T. L. Pardo, M.P.P., was again nominated by the Liberals of West Kent. Please Please! Nothing like it. SYMPTOMS—Molecules; intense itching and stinging; most at night; worse by scratching. If allowed to continue tumors form, which often bleed and ulcerate, becoming very sore. "Bayer's Ointment" stops the itching and bleeding, heals abrasions, and in most cases removes the tumors. At drug stores or by mail for 50 cents. Dr. S. W. Ross, Philadelphia, Lyman Stone & Co., Montreal, Wisconsin, Agent.

Downie Street. She has been an invalid for some years, and her case awakened the sympathy of her neighbors, who were confident there was no cure for her. Judge of their surprise and delight on hearing what Mrs. Roberts tells thus: "I have been afflicted during three years with kidney disease. Have used doctors' medicines but could not get cured. I have used five boxes of Dodd's Kidney Pills and am now cured. You may publish this if you choose. This is a short statement, but it tells a great deal."

Premier Hardy and Mr. Harcourt will speak at Toronto Junction on Oct. 13. A Generous Offer. (Published by Request.) Dear Mr. Editor—Will you kindly inform the readers of your valuable paper that I will gladly send FREE to any sufferer from Lost Manhood, Nervous Debility, Night Losses, Varicocele, Impotency and the results of youthful folly, particulars of a simple and inexpensive means of self-cure which after being humbugged and imposed upon for years by quacks and patent medicine sharks, cured me in a few weeks. I have nothing to sell or give away, nor am I advertising any patent medicine business, but will be pleased to hear from any sufferer anxious to find a cure for his complaint, to whom I will explain confidentially how and by what means I was cured. Hundreds have been cured through my advice. Costs nothing to learn what I paid hundreds of dollars to find out. Address confidentially and enclose stamp if not sent.

Mr. T. L. Pardo, M.P.P., was again nominated by the Liberals of West Kent. Please Please! Nothing like it. SYMPTOMS—Molecules; intense itching and stinging; most at night; worse by scratching. LINDSAY

The directors of the Y. M. C. A. will place baths and a gymnasium in the institution about the first of November. When the proposed improvements are made the Y. M. C. A. will be fully up to a city one. In view of this special efforts are being made to increase the membership.

Died at the Daily House. A death surrounded by unusual and circumstances occurred at the Daily House on Sunday. During September George Taylor, residing near Cameron, went to visit his son at Tonawanda, N.Y. He had only returned from his visit a few weeks when he took sick and died. His son, Norman, a young man of 27 years of age, came here on Monday last week to look after his father's property. On Tuesday he took sick and consulted Dr. McAlpine who saw that he was suffering from appendicitis and sent him to the hospital.

Thousands of young and middle aged men are annually swept to a premature grave through EARLY INDISCRETIONS, EXCESSES, AND BLOOD DISEASES. If you are young and weak, despondent and gloomy, specks before the eyes with dark circles under the eyes, weak back, kidneys irritable, pallidness of the face, faintness, dizziness and losses, sediment in urine, pimples on the face, eyes sunken, hollow cheeks, careworn expression, poor memory, listless, distrustful, lack energy and strength, tired morning, restless nights, changeable moods, weak manhood, stunted organs and premature decay, bone pains, hair loose, sore throat etc.

OUR NEW METHOD TREATMENT alone can cure you, and make a man of you. Under its influence the brain becomes active, the blood purified, so that all pimples, blotches and ulcers disappear; the nerves become strong as steel, so that nervousness, hesitancy and despondency disappear; the eyes become bright, the face full and clear, energy returns to the body, and the moral, physical and sexual systems are invigorated; all venous disease—no more vital waste from the system. The various organs become natural and healthy. You feel yourself a man and know marriage cannot be a failure. We invite all the afflicted to consult us confidentially and free of charge. Don't let weakness and listless rob you of your hard earned dollars. We will cure you or no pay.

HAS YOUR BLOOD BEEN DISEASED? PHYLIS is the most prevalent and most serious BLOOD disease. It seeps the very life blood of the victim and is entirely eradicated from the system will affect the offspring. Beware of Mercury. ANTI-BOOZE

THE ORIENTAL REMEDY
The New, Safe and Sure Cure for Drunkenness.

TREATMENT by the new remedy does not necessitate retirement to a sanitarium. It can be administered, without the patient's knowledge, with his food and drink. Victims are cured without their knowledge, crediting the change to the force of their own will.

ANTI-BOOZE is put up in convenient form, and sells at \$1.00 per box. Three boxes \$2.50. It will be forwarded prepaid, sealed and in a plain wrapper, by remitting the amount to

Oriental Chemical Co.
20 St. Alexis St., Montreal.
