How to Keep'a Cistern Clean.

Complaints are frequent of the impure elected. water of cisterns. This is inevitable unde the careloss management of the useful a -ditions to the water supply, and is a fruit ful source of what are called "malaria diseases." A roof gathers a large quantity of birds, dust, dead leaves, pollen from foul matter from entering the cistern, is to maintaining toreign signal stations for the each, (exchangeable at any time for bound cedent in the fact of periodical literature is which we are offering at remarkably have the leader movable, and swung from purpose of obtaining accurate forecasts of volumes), which are sent post-paid for 15 stated by the publisher, viz.: that it is Low prices. Also a large shipmen weather the pipe is turned over the waste and aftea the rain has fallen' for a sufficie time to wash off the roofs and gutters, it turned into the cistern pipe. The cistern is provided with a soft brick wall laid i coment, through which the water filters coming out by the pump perfectly pure and free from unpleasant odors .- American Agridulturalist for April.

Management of Young Lambs.

The sooner the young lambs are do:ked and the males emasculated, the easier the operations may be preformed. We have been in the habit of going through the flock slipped up toward the root with the fingers | that the man who had been bitten by a of this hand; the tail is then clipped off wolf, died before the Pasteur treatment sloughs off; this, however, rarely happens ! if the shears are clean, and at the same tained a New York lawyer to prosecu time sharp.—American Agriculturist for their claims against the Cunard Company.

A Good System of Pruning.

Systematic pruning has few followers in was caused by collision with the wreck of and pear orchards according to an estab | ber full complement of boats. 'It has been | faded into history. lished rule, one of which may be described discovered, however, that she had on board as follows. Commencing with a two or only 120 cork life jackets and 600 life three year old tree the body is trimmed to buoys. Thus if every one of the passenthe requisite height, when three branches gers and crew-over 1,000 in all-had been are allowed to start out from as nearly the compelled to rely on these agencies for angles. From eighteen to twenty-four hundred would have been drawned. inches higher up, a similar whorl is located. which system is carried out so long as the ticular, so that an open head is formed.
