

Don't be fooled!

Your electric water heater is still the best thing going in hot water for your home

HERE'S WHY

1 The average Oakville household uses 50 gallons of hot water daily. Based on current fuel rates and discounts, electricity is competitive with other fuels for water heating.

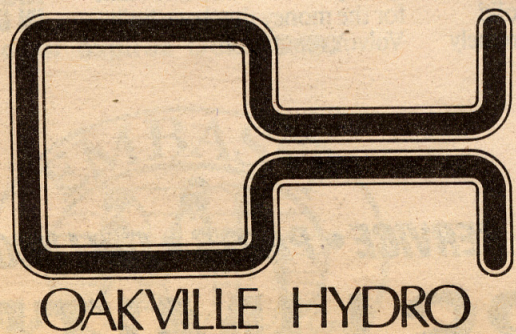

2 Your Oakville Hydro offers exceptional service. It's expert, free, and available 24 hours a day. For your added peace of mind, all meter reading and service personnel are uniformed, pleasant, and equipped with official identification.

3 Electricity is still the cleanest, safest way available to heat water in your home.

4 Electricity is the only native Ontario fuel available in sufficient quantity to assure an ample supply of economical fuel for a long, long time to come.

So, if you've thought about switching, do yourself a favour and stick with hydro. It's still the hottest thing in water for your home.
