PUTTING PLANTS TO BLEEP.

All plants, even in tropical countries require a period of rest. Some repose in the rainy, others in the dry, and others again in the cold or in the hot season. Herr Johannsen, a Scandinavian , believes he can abridge this period by intensifying the "sleep" with chloroform of ether. Bulbs or buds exposed to the wapors of these anasesthetics resume their period of activity sooner than those not so treated. It has also been observed that the tubercules of orchids placed near warming pipes and thus more com-pletely dried, began to spring sooner than others kept in the ordinary way.
