Amid the thorns it found a place. so every grief that here we win Has some sweet blossom hid within.

And every sorrow, without doubt, Some helpful lesson twines about.

Search mid the fingers of each care, You'll find the rosebid hidden there.

CLOSETS AND SHELVES.

Many houses are built without making the proper arrangements for closets and cupboards, and it becomes necassary to provide a place for the clothing, trunks and other things that are very useful but which do not add to the appearance of the rooms, if left ex-

posed to view, says a writer.

A corner wardrobe or closet is very convenient in a bed-room or sittingfrom and is easily constructed. Two wide pieces of board are fastened to two walls which meet in a corner at sheight of five or six feet from the floor. A row of hooks placed near the lower edge of the boards is used to hang the clothing on, and a threecornered shelf rests upon the upper idge. A foot above this is another shelf fastened to the wall in the same way, and from the front edge hangs a curtain of prettily figured sateen of retonne, of a color which harmonizes with the other furnishings of the room. The lower shelf is used for hats, and the upper one is a good place for vases and pieces of bric-a-brac, if the ceiling of the room is high. A three-cornered tox with a hinged lid set on the floor, s a convenient receptacle for boots, shoes and rubbers. A panel door may be substituted for the curtain if prelerred, and the expense will be slight, I you have some one in your family who knows how to use carpenter's

A friend of mine has a very pretty and comfortable lounge in her sittingroom, which I was surprised to find was also used as a chest for the extra comforts and other bed clothes not needed in the summer. A box six feet long and two feet wide, with castors under the corners and a lid fastened to one side with hinges, is the foundation. The top of the box is padded with several thicknesses of old quilts, blue denim, putting the light side out, and a full ruffle of the denim is placed around the front and two ends. This reaches the floor, and conceals the box from view. A large pillow, also covered with denim, is placed at the head A lounge made like this for the dining foom would do nicely for table and bed linen. Place a partition across the middle, dividing it in two parts, and use one for tablecloths, napkins, side-Wher for sheets and pillow cases. The seats and cozy corners nuch in favor now-a-days could be Ituized in the same way.

ing, have lattice panels set in at the top and under this place a pole fastened to the side pieces of wood, nailed January, February and March. up to secure the lattice transom. From his pole suspended a curtain, which lalls before the shelves, protecting their contents from the dust and sunlight. This might be fitted up for a

clothes press or wardrobe. A convenient medicine chest is made by fastening a box twelve inches high, sixteen inches long, and seven inches deep, near the end of the mantle shelf. A strip of moulding is put on around the upper edge. It was divided into two parts, one for tall bottles and one for short, by putting in a shelf ten inches from the bottom. A curtain of momie cloth, fini hed at the lower edge with hell fringe, was placed across the front. In these shelves were kept various toilet articles, glyterine, cologne, ammonia. tooth powder, mucilage, and other bottles that are useful but unsightly. The woodwork should always be stained or painted to correspond with the other

woodwork in the room. A friend of mine found, upon moving into a new home, that one of her ate a mess of toadstools that an exup tairs bed-rooms was quite long and pert had pronounced to be mushrooms rusty nails used by those who have Blooms, both ends being cut off by the and then shot himself with an unleadsloping roof, until the upright walls ed gun. were only four feet high. The Fall

With its sudden changes, its hot days and chilly nights, dampness and decaying vegetation, this season is peculiarly trying to the health. A good Fall Medicine is as important and beneficial as Spring Medicine. Hood's Sarsaparilla is just what is needed when the leaves begin to fall; it keeps the blood pure, wards off malaria, creates a good appetite, gives refreshing sleep, and maintains the health tone through this trying season.

Is Canada's Greatest Medicine. \$1: six for \$5. Prepared by C. I. Hood & Co., Lowell, Mass. Hood's Pills cure Liver Ills; easy to take, easy to operate. 25c.

things that are injured by folding. The other drawers were smaller. On the other side the space was used for closets, and furnished with two panel doors. The appearance of the room was greatly improved, and as closet room was unusually scarce in this house, she has often assured me that she would not do without the closets and drawers for many times what they cost.

HOME OF THE FLOWERS.

The Scilly Islands are a little group of rocks, islets and barren crags about fifty miles off the very southwestern point of England. There is an isle or a rock for every day in the year, counting those that appear above high wa- they can really be made a valuable ter-twice as many perhaps when the property. tide is out. Only five of the islands are inhabited and the largest is but just about 400 miles west of Valtwo and a half miles long by one and paraiso, in the South Pacific Ocean. It a half miles wide.

In Roman days the islands were used ers, which make excursions there as a place of banishment; later they became a refuge for outlaws. These outlaws became smugglers and wreckers, the latter not at all removed from pirates, and many a vessel has been lured on the rocks by false lights for the sake of the treasures to be cast up by the sea after its destruction. It is said of the islands that they are 'the most extensive marine graveyard in the world," and in spite of the powerful light which now warns the mariners to keep away even when twenty miles distant every winter sees some unfortunate ship dashed to pieces on these dangerous rocks.

A branch of the gulf stream sweeps round these isles and brings them within the semi-tropical zone. The climate is months earlier than on the mainland. January in the Scillies is like April in England, thus spring begins at Christmas.

These conditions are favorable to the chief, almost, indeed, the only industry of the islands, the growing of cut flowers, chiefly the daffodil and narcissus. It may be said the conditions every available acre of land in the five inhabited islands is set to flowers. Some of the large flower farmers have the chief-drawback is the wind storms acre, separated by hedges for protection frm the wind.

The flowers are cut while still in bud and set in trays or pots of water in hot houses to ripen. As this occurs, boys and girls put them into bunches and pack them for shipment. They are sent to London, where every grower has his customers, while the surplus stocks the city's great flower market, Covcovers, doilies, etc., and the sixty-three cents for a dozen bunches and the crop from the Scillies, during its three spring months, is worth \$300, 000. Some idea of the enormous output litted up as a bookcase or closet. If the dred and sixty boxes, each of which log extends from the floor to the ceil- holds six dozen bunches, are allowed to a ton. Scmething like 69,000,000 blooms

> The Scillies belong to the crown and the revenue goes to the Prince of Wales. The inhabitants hold their farms under leases. If a man wants to build a house he submits his plans to the governor of the islands, who leases him the land on which to build for ninety-nine years. At the end of that time the house and all go to the crown.

CRUSOE'S ISLE.

THE ISLAND OF JUAN FERNANDEZ

ABOUT TO BE COLONIZED. Chili Will Send Settlers to the World Famed Spot Which is Not so Tropical a

Place as Defee Pictured.

Robinson Crusoe's Island is to b colonized. The Government of Chili has just adopted resolutions to that effect and by the time this shall have been published an inspector will have been appointed and in all probability a number of new inhabitants will have been carried to the Island of Darilla Juan Fernandez. Within the past few weeks the President of Chili has visited this island on a tour of inspection and both himself and his officials report that it can be made of great value to the country. It has been decided to give each settler a house and a certain amount of land, and the idea is to make a large fishing colony there. The codfish caught off the shores of Juan Fernandez are especially fine. They swarm about its shores, and, in connection with lobsters and other shell-fish, might form the basis of a great industry. There are also many seal, walrusses and other marine animals in the waters near by, and the mainland has in its woods many wild goats, wild sheep and wild mules. There are parts of the island that are very fertile and it is thought that

> The island of Juan Fernandez lies can be reached only by special steam-

ONCE OR TWICE A YEAR.

The island is bleaker and colder than DeFoe's picture of it. It is only twelve miles long by about seven miles wide, but parts of it are the picture of desolation. It is a great mass of rocks, which rises upward from the waters for more than a thousand feet. It is made up of hills and mountains, of little ravines and valleys. The northern half of the island is covered with a dense vegetation, but the southern half is as bleak and bare as the western slopes of the Andes in the rear of the Peruvian dessert. Most of the shores place is the Cumberland bay, at which point there is now a fishing settle- er. ment, which includes about all the people of the island. There are, it is said. orly fifteen people now living there. Back of the settlement on the bay there are cottages, or straw huts, which once formed the homes of number of settlers who lived there. These huts are made of cane, watted are the cause of the industry. Nearly with straw. There are gardens about some of them, and at one time there the blood and mucous suifaces of the system. was an agricultural colony here. One from twenty-five to thirty-five acres man attempted to start a stock-raisin flowers, but from five to seven acres ing plantation, and he had, it is said, is the average. The only-or at least as many as 30,000 head of cattle, and that sometimes sweep over the isles an equal number of sheep grazing in that were too badly worn to be used and blast the buds. The buds are plant- the valleys on the north of the island. in any other way, then covered with ed in patches of perhaps a third of an Of late, however, this business has almost entirely disappeared, and cattle

ARE ALLOWED TO GO WILD. and there are now on the island wild sheep, wild goats and wild mules.

There is no doubt but that Juan Fernandez is a rich island as far as the soil of the northern part of it is conent Garden. The grower gets about cerned, and with this new colonizing scheme it may support quite a large number of people. The hills are covered now with wild oats, and there may be gained from the fact that the is good grass in every open spot. The A recess or jog in the wall maybe yearly output is 500 tons. One hun- fruit trees planted more than a hundred years ago by Selkirk and others have reproduced themselves, and there a ton. Schiething like 69,000,000 blooms then, must be sent to market during January, February and March.

The Scillies belong to the crown and the sent Robinson Crusoe dried

The Scillies belong to the crown and the sent Robinson Crusoe dried the sent Robin as those which Robinson Crusoe dried for raisins. There are peaches, pears, and quinces growing wild, and also wild vegetables. A peculiar plant is the panga, which has leaves forming a cup as big as an umbrella. This fills with water when it rains, and stays full as long as it is cloudy. When the sun comes out it begins to wilt and the water flows out.

There are a number of caves on Juan Fernandez, and several are pointed out in which it is said Alexander Selkirk lived, One of these, which lies in a ridge of volcanic rock, is as large as the average parlour, with a roof from ten to fifteen feet above the floor. The door to this cave is about fifteen feet high and its extent to the rear at least thirty feet. It shows signs of having been lived in. There are little holes or pockets scooped out of the walls such as are mentioned in OF HIS CAVE-HOME

and here and there on the walls are lived here in the past. It is said that the cave was the resort of the buccaneers who once ravaged the coast and ships of this part of the world.
