

A Great Reputation

HAS BEEN ACHIEVED BY DR. WILLIAMS' PINK PILLS.

Not Only in Canada, But in Every Civilized Country Throughout the World—Merit Alone Has Given This Medicine Its Great Prominence Over Competitors Everywhere.

The reputation achieved by Dr. Williams' Pink Pills not only in Canada, but throughout the world, rests upon a very solid basis, which may be summed up in two words—merit. The Enterprise has had occasion to investigate a number of cures effected by this medicine, and knows that in some instances at least these cures were wrought after other medicines had failed even to give relief. Recently another cure came under our notice that cannot fail to increase the popularity of Dr. Williams' Pink Pills in the locality in which it occurred, and as we can vouch for the facts, it may well bring hope to sufferers elsewhere.

Mr. Walter H. Johnston is one of the best known residents of the northern section of Queen's county. He resides in the town of Caledonia, where he keeps a hotel, and also runs a stage that carries passengers and mail between that town and Liverpool, a distance of some thirty miles. Mr. Johnston was in Bridge-water recently, on which occasion he gave a reporter of this paper the following facts: About three years ago he was taken very ill. He had the best of medical attendance, but made very little progress towards recovery, and the doctor told him there was very little hope that he would be able to return to his former work. The trouble appeared to have located itself in his kidneys, and for eight weeks or more he was confined to bed. He suffered greatly from constant pains in the back, his appetite became impaired, and his constitution generally appeared to be shattered. At this juncture he decided to try Dr. Williams' Pink Pills and got a half dozen boxes. In the course of a couple of weeks he noticed an improvement in his condition and he continued the use of the pills until he had taken some ten or twelve boxes, when he not only felt that his cure was complete, but also felt that in all respects his health was better than it had been for years. Since that time he has been continually driving his coach between Caledonia and Liverpool, and has not had the slightest return of the trouble, notwithstanding that he has to face at times very inclement weather, that might well bring on a return of the trouble had not his system been so strongly fortified against it through the use of Dr. Williams' Pink Pills.

If the blood is pure and wholesome disease cannot exist. The reason why Dr. Williams' Pink Pills cure so many forms of disease is that they act directly upon the blood and nerves, thus reaching the root of the trouble. Other medicines act only upon the symptoms of the trouble, and that is the reason the trouble always returns when you cease these medicines. Dr. Williams' Pink Pills make permanent cures in kidney troubles, rheumatism, erysipelas, anaemia, and kindred diseases. But be sure you get the genuine which bear the full name Dr. Williams' Pink Pills for Pale People on the wrapper around every box.

The body of a Viking, in a wonderful state of preservation, has been dug up in a peat bog at Domendorf, in Schleswig, and placed in the Kiel museum. The hair is red; it is clothed in coarse woollen material, with sandals on the feet. Kiel experts think it was buried 1,500 years ago.

The potato, hitherto grown as a tuber under ground, is now being produced like fruit from the stem of the plant. The flavour of these really "new" potatoes, is excellent.

Constipated Bowels

Give Rise to Dyspepsia and Other Bodily Derangements—Dr. Chase's Kidney-Liver Pills are Unique as the Only Treatment Which Permanently Cures Constipation.

Constipation, or inactivity of the bowels, is probably the cause of more distress and suffering than any other organic derangement. Once the bowels are constipated the kidneys become clogged, the liver torpid and the stomach and whole digestive system completely interfered with.

The head aches, there is dizziness, weakness and dimness of vision, pains in the back, sides and limbs, the accumulation of wind and gas on the stomach, pains and fulness in the region of the stomach and depression and despondency of spirits.

Constipation can never be cured by the use of salts and similar weakening and debilitating purgatives. Dr. Chase's Kidney-Liver Pills not only cause the natural action of the bowels but strengthen and invigorate them as to enable them to regulate perform their functions without the aid of medicines. They also act on the liver and kidneys, and so revitalize the whole excretory system and permanently cure the most serious cases of constipation, biliousness and dyspepsia.

Mrs. W. E. Fisher, Preston, Ont.

HONEY-HUNTERS.

Use a Clever Trick for Marking a Bee With Cotton.

In order to be followed the bee must have a distinguishing mark that can be easily seen, and with such a badge the Australian provides it. He gums a small tuft of white cotton to the bee's back, and thus follows it with comparative ease. But the question now comes up, how is the cotton to be put upon the bee's back?

The gun is quickly found; it is on almost any tree; the cotton grows right at hand. The bee, too, is found in almost any sweet flower, buried head first in the dusky pollen, drinking in the nectar, and showing quite plainly whether its honey sac is full or empty. It moves a little in its eager haste to secure the delicious liquid, but perhaps a quick dab will fasten the cotton on its back. Do not try it. As the little boy told his smother, the bee is a very "quick kicker."

Watch the Australian—and he is a very stupid fellow, too, in most things. He fills his mouth with water, has his snow tuft of cotton ready gummed, finds his bee, gently drenches it with water spurted from his mouth, picks it up while it is still indignantly shaking itself free from the water which clogs its wings, and with a dexterous touch he affixes in an instant the telltale cotton. Very much out of patience, no doubt, with the sudden and unexpected rainstorm, the bee rubs off the tiny drops from its wings, tries them, rubs again, and soon, buzz! buzz! away it goes, unconsciously leading destruction and pillage to its happy home.

CURIOS BURIAL CEREMONIES.

Strange and impressive are the ceremonies attending the burial of Spanish kings. The pantheon, or royal tomb, is at the palace of the Escorial, situated three thousand feet above the level of the sea, and some distance from the capital. Only kings, queens and mothers of kings are buried there, the coffins of the kings lying on one side, those of the queens on the other. After lying in state for several days in the throne room in Madrid, a procession is formed to accompany the body to the Escorial. A halt is made on the way, and the corpse rests there for one night. In the morning the lord high chamberlain stands at the side of the coffin and says in loud tones, "Is your majesty pleased to proceed on your journey?" After a short silence the procession moves on, and winds up to the grand portal of the palace. These doors are never opened except to admit a royal personage, dead or alive. When the casket containing the remains is at last placed in the vault, the chamberlain unlocks it, and, kneeling down, calls with a loud voice, "Senor! Senor! Senor!" After a solemn pause, he cries again, "His Majesty does not reply. Then it is true, the king is dead!" He then looks the coffin, gives the key to the prior, the pulser of the Escorial contains also a large monastery and church, and taking his staff of office, breaks it in pieces and flings them at the casket. The booming of the guns and the tolling of bells announces to the nation that the king has gone to his final resting place.

Formosa now controls the camphor product of the world. The Japanese annual production has dwindled to 300,000 pounds; the Chinese has never exceeded 200,000 pounds, while the Formosan supply averages 6,000,000 pounds a year.

The Rhine has enjoyed a novel sensation from the visit of a flotilla of German torpedo-boats, which the Kaiser sent up the river, in order to show the islanders a sample of the new navy that is costing them such a pretty penny.

HOW YOUR BRAIN GETS TIRED.

Small Goblets Which Are Drained by the Demands of Mind and Body.

The cells of the brain, when quite fresh and vigorous, may be likened to small balloons inflated ready for an ascent. They are round and full, and when seen under the microscope, they give evidence of being distended. The cells of the tired brain, on the other hand, are seen to be shrunken, as an air-ball or toy balloon from which most of the air or gas has escaped.

When our brains begin to work after a refreshing rest or sleep, they are full of nerve fluid which the absorbents of the body and brain have stored up there like bees fill their comb. So soon as work begins, this vital force is sapped to meet the demands upon the brain, and the process that goes on during the whole time it is working may be described in the following way:

Imagine that these cells are small goblets filled with liquid, and that they have a tiny stem, through which runs a tube or opening; the liquid in the goblet is drained by the demands of mind and body, and slowly trickles through the opening, drop by drop, until either the work ceases or the goblet is exhausted.

This latter condition is not often reached, for the simple reason that the owner of the brain is very much more likely to collapse. When the sell has yielded half its vital fluid, you begin to experience a feeling of fatigue, and if you go on drawing the contents of the cells, you are doing yourself injury in a proportionate degree, and Nature will make you pay for it in some way or other.

But all the cells are not involved in any kind of mental work, which means that one part of the brain may be very actively at work while the other is resting and storing up nerve fluid. Thus it is that a man suffering from brain fog, may leave his books and go golfing or cycling, and feel that he is really resting; other cells are being called upon for work now, while the tired ones—those required for mental activity—are enjoying repose.

But it follows that the part of the brain which is called into activity for bodily exercise is now getting tired, while the other part of the brain is still at work to some extent, and so the whole of our brain cells become fatigued, and total rest in the shape of sleep is absolutely essential.

HERE AND THERE.

Items That Will Interest From All Corners of the World.

4,000 tourists arrived in Europe during the last season.

During 1899 Spain bought sixty-seven vessels in England.

Germany has one doctor for every 1,937 inhabitants.

There are 256 railway-stations within a six-mile radius of St. Paul's Cathedral, London.

The strength of a lion has been shown to average only 69 per cent. of the strength of a tiger.

The thirty-three largest towns of England and Wales have a total population of nearly 12,000,000.

The longest plant in the world is a species of subtropical seaweed, which grows to 600 ft. in length.

Coloured globes in the windows of chemists' shops were first displayed by the Moorish druggists of Arabia and Spain.

On Brazilian railways no baggage is transported free, and a passenger is allowed to take into the carriage a small handbag only.

WHAT MAKES MOTTLES.

1. The uneven distribution of salt is the cause of unevenly colored butter spoken of as mottled butter.

2. Washing the butter with water below 40 degrees does not cause mottles. It does, however, make a little more working necessary to thoroughly distribute the salt.

3. The light colored streaks or portions of mottled butter are not caused by an excess of acetic acid, but mottles are evidently caused by some physical action of salt on the butterfat, which causes it to admit more light.

4. Mottles can be prevented by working the butter sufficiently to thoroughly distribute the salt.

4. Washed with water at 40 degrees and under and worked immediately shows a better grain when sufficiently worked to insure its being evenly colored than with any other treatment.

6. Washing butter with water at 40 degrees and under does not injure its firmness when subjected to high temperature.

A new cork for poison bottles ought to be very effective in the prevention of mishaps. It has a kind of anchor attached to it so that the cork cannot be entirely separated from the bottle, and it gives a warning click when the cork has reached the limit of withdrawal.

I know I am not worthy of your love. Then we do have some views in common after all.

DECAY IN TEETH.

Judging from the questions constantly asked the dentist, it is no exaggeration to say few people have a clear conception of the causes which lead to decay of the teeth.

Chief among them is the fermentation of particles of food lodged between the teeth, or in their pits or depressions, during mastication. When through carelessness or indifference, these deposits are not removed under the influence of the warmth, moisture and the microbes present, fermentation, or chemical change, takes place and an acid is generated, and this dissolves the enamel and dentine leaving a cavity to grow larger and deeper.

The dentine is of a tubular structure and in these tubules the microbes which constantly exist in the mouth penetrate, where they continue their destructive effect till the tooth is completely destroyed.

Microbes are minute vegetable organisms some of the many species of which are so small that they are only visible under the microscope. They are the cause of a large class of infectious or contagious diseases, and between them and the body there is a constant struggle.

The process of fermentation is of itself but the growth of multiplication of these minute organisms, and in this process of their life history they produce the acids and other poisonous materials which make them so fatal to mankind. Their number is inconceivable.

These are the direct causes of decay of the teeth. But there are also exist indirect, or contributing, causes, and these may be anything which will lower the general tone of the system, and make it less able to resist the action of deleterious agents.

Among these secondary causes producing decay may be mentioned any protracted sickness, the lack of outdoor exercise, excessive study, anxiety or worry, which undermine and weaken the system. When the body is ill, no one organ can be said to be perfectly sound.

BUTTER A CURE.

Chronic constipation in otherwise healthy children, is not a disease, but an obstruction of the intestines from too much food, an Austrian physician asserts, in most cases. This condition can be simply and effectively terminated by giving the child fresh butter, a half to a teaspoonful during the first two or three months of life until normal defecation is restored and then this dose every second day. Between third and fourth month give two or three teaspoonfuls a day, until relieved, and then every second or third day. From five months to a year one to three tablespoonfuls every two or three days. Over this age give as needed. The butter must be given unchanged; not warmed nor mixed with any substance, as this alters its composition. In an experience of six years every child has taken the butter with relish. It increases the nourishing elements of the food in small compass, and is the nearest approach to milk. A part is readily assimilated and the rest is eliminated stimulating peristalsis as it passes through the intestines. Pale, pasty children become red-cheeked and hearty, and the benefits of this butter treatment are evident up to the fifth and sixth year.

PRESERVING FRUITS.

Apples, pears, plums, apricots, &c., for preserving in sugar or pickling vinegar may be greened thus: Put vineleaves under, between and over the fruit in a preserving kettle; put small bits of alum the size of a pea, say a dozen bits to a kettle full; put enough water to cover the fruit, cover the kettle close to exclude all outer air, set it over a gentle fire, let them simmer; when they are tender drain off the water; if they are not a fine green let them become cold, then put vine leaves and a bit of saleratus or soda with them, and set them over a slow fire until they begin to simmer; a bit of soda or saleratus the size of a small nutmeg will have the desired effect; then spread them out to cool, after which finish as severally directed.

TO PRESERVE APPLES.

Pare and core and cut the apples in halves or quarters. Take as many pounds of the best brown sugar; put a teaspoon of water to each pound. When it is dissolved set it over the fire, and when boiling hot put in the fruit and sirup will be thick. Take the fruit with a skimmer to flat

dishes; spread it to cool; then place in pots or jars, and pour the jelly over and seal the jar. Lemons boiled tender in water and sliced thin may be boiled with the apples.

TO CAN PEACHES.

Take small under-ripe peaches, pare them neatly and put them into a kettle with water nearly to cover them, and set them over a gentle fire to each quart of peaches put half a pound of sugar; let them stew until the sirup is rich. Serve for tea or dessert, or seal them in jars while hot.

TO PRESERVE PEARS.

Take small, rich, fair fruit, as soon as the pips are black, set them over the fire in a kettle, with water to cover them; let them simmer until they will yield to the pressure of the finger, then with a skimmer take them into cold water, pare them neatly, leaving on a little of the stem, and the blossom end; pierce them at the blossom end of the core, then make a sirup of a pound of sugar for each pound of fruit; when it is boiling hot pour it over the pears, and let it stand until the next day; when drain it off, make it boiling hot and again pour it over; after a day or two put the fruit in the sirup over the fire and boil gently until it is clear, then take it into jars or spread it on dishes, boil the sirup thick, then put it and the fruit in jars.

TO CLARIFY THE SUGAR.

Put into a preserving pan as many pounds of sugar as you wish; to each pound of sugar put half a pint of water, and the white of an egg to every four pounds; stir it together until the sugar is dissolved; then set it over a gentle fire; stir it occasionally, and take off the scum as it rises; after a few boilings up the sugar will rise so high as to run over the side of the pan; to prevent which, take it from the fire for a few minutes, when it will subside, and leave time for

LUDELLA

CEYLON TEA, the fact that it is the peoples' favourite, should dispel any question in your mind as to its excellence, if you have never tried it. DO SO, and you will become a constant consumer. In Lead Packets. 25, 30, 40, 50 and 60c.

\$200.00 in Cash, Free

We will give the above award to any person who will correctly arrange the above letters to spell the names of Two British Generals and one Boer General. Who are they? You may be the fortunate person to secure at least a portion, if not the full amount. For should there be more than one set of correct answers, the money will be equally divided. This offer is made to advertise and introduce our firm quickly.

We do not want One Cent of Your Money. This Contest is Free.

As soon as you have arranged what you suppose are the correct names, send them. A post card will do, and you will hear from us promptly by return mail. Those who have tried other contests and failed to secure anything by this one. All can secure an award if they wish to try, without any expense whatsoever. N. Y. Supply Co., 213 W. Orilla, Canada.

A Painting Pleasure.

Those who use the right Paints find a great deal of pleasure in them. They are made to give satisfaction, and are certain to accomplish that purpose.

RAMSAY'S PAINTS

are the right paints. They are well mixed, permanent colors. They retain their fresh, pleasing appearance after months and years of exposure.

DIDN'T WORRY HIM A BIT. The Doctor—Above all things madame, your husband mustn't worry. Perhaps you'd better not show him my bill just now.

But I did, doctor, and it didn't make any difference. He said he knew he couldn't pay it anyway.

There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors prescribed a local disease, and prescribed local treatment, pronounced it incurable. Science has proven Catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address: F. J. CHENEY & CO., Toledo, O. Sold by Druggists, 75c. Hall's Family Pills are the best.

TO COLOR FRUIT YELLOW. Boil the fruit with fresh skin lemons in water to cover them until it is tender; then take it up, spread it on dishes to cool, and finish as may be directed.

The costliest paintings of modern times are Meissonier's "1814" and Millet's "The Angelus." \$32,000 was given for "1814" and \$30,000 for "The Angelus."

"I Have Had Rheumatism for years, and Nerviline is the only remedy that has done me any good," so writes Thomas McGlashan, North Pelham, and his testimony is supported by thousands of others who have experienced the wonderful penetrating and pain subduing power of Nerviline—the great nerve-pain cure.

TO CURE A COLD IN ONE DAY. Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.
