DURHAM CHRONICLE

W IRWIN, Editor and Proprietor.

DURHAM, MAY 22ND, 1902.

Vote for Dr. Jamieson.

the machine.

some of the evils.

The Election Act provides that Deputy Returning Officers must be residents of the polling subdivisions in which they act. Let the appointment of such be closely watched, and keep out the trained pluggers of the machine.

The use of a soft pencil is another of the tricks by which unprincipled deputy returning officers have spoiled the ballots of Conservative voters. Watch the pencil. Watch everything. Scrutineers should see that the ballot box is empty at the opening of the polls. Every movement of the D. R. O. should be watched when giving ballots to the elector or returning the same to the ballot box and see that he does no put others in with it or substitute others for it. Watch also the ballot when returned by the elector and see that only one ballot is returned.

poll and see that no extra ballots are over a representative of whom we have put into the box. The ballots must be all reason so feel proud. counted before examining either the back or face of them as the Act requires. (See Section 112) which says: A life-long Liberal looks very favor-First, "Count the whole number of ably on Dr. Jamieson's effort in the ballot papers in the box without open- Legislature to reduce the membership. ing any of them, and if the number Is there any person of any shade of corresponds with or does not exceed politics who believes that the Governthe number of persons who voted no ment of this country could not be further examination to ascertain shall administered as well with a much be made. If the number of ballot pa- smaller representation than it has at pers in the box exceeds the number of present. persons who voted, he shall, without opening the ballot papers, examine the backs thereof, so far as may be necessary to see his name or initials, and shall reject any papers not having thereon his name or initials. After such examination is completed to the extent necessary he shall proceed to examine the ballot papers (or the ballot papers not rejected as the case may be) in order to count up the votes given for each candidate, keeping the ballot papers with their printed faces upwards, and taking all precautions not to see or to permit any person to see the number printed on the back of any

The D. R. O. shall endorse "Rejected" on every ballot paper which he may reject as invalid, and shall endorse "Rejection objected to" if any objection be made to his decision.

The foregoing is to be found on Ontario, 1897.

Beware of the machine.

Political importations have been go ing round the concessions and sidelines It is well for electors to be guarded against bribery. The person receiving a bribe is just as punishable as the one who gives it.

and How it works." Then decide for pure government by voting to support Mr. Whitney, who "is honest enough to be bold, and bold enough to be honest."

Has Ross been honest in substituting the Referendum for a direct promise NOW is the time to prevent to give prohibitive Legislation? The School Book Monopoly enjoyed by the pets of the Government, is a grievous tax on the people of this country, and every one interested in his own pocket should vote against the Ross Government, and get a redress DON'T put away your Furs of the grievance through Mr. Whitney's educational policy. For some time the opposition in the local house has been crying out against this evil, and as a result of their determined agitation a committee was appointed to MacFarlane & Co. investigate the matter. The commission was appointed secretly without the knowledge of the public, the press or the legislature, and not until the last day of the session of 1898 was the report laid on the desks of the members. Of the secret commission, one was the accountent of the Education Department, another was the Assistant Queen's printer, and the remaining eighteen were all connected in some way with the Publishing Department, Under the circumstance it is not a surprise to learn that the report of the commission was to the effect that the cost of school books is not too high. Subsequently the evidence was asked for, with the result that an angry de-Nearing the election, every one bate followed, in which Mr. Ross and should keep his weather eye open for Mr. Harcourt took part, but they finally agreed to bring down the evidence, but the evidence did not come, We publish this week a lengthy ar- and after four or five pressing demands ticle showing how the stuffing, switch- the House was told there was no eviing and spoiling of baliots was con- dence. It may help grapher, which would mean that there scrutineers to be on their guard against should have been about 200 pages. There certainly must have been evidence, and the question now is what

We take the liberty of saying a word in behalf of Dr. Jamieson, whom many of our readers of both shades of politics know and respect. For many years he has been before the public in his professional capacity, and for the past four years his ability as a parliamentary representative, and his shrewd grasp of matters political have further raised him in the estimation of the public. His parliamentary and campaign practice have caused him to develop into a clear forcible speaker, and logical debater. He has ample control of himself to appear calm and unimpassioned in the height of controversia debate, and in the House or on the hustings he never forgets to act a gentleman. As we pointed out a few weeks ago, Dr. Jamieson is a shrewd business man, and being the possessor of a well balanced judgment he is a Watch the D. R. O. at close of the good and wise counsellor, and more-

most important duties the dairy in- will be held on Thursday, June 5th. structors would be clothed with the requisite authority as dairy inspectors, the cost of the additional work being covered by a fee chargeable on each license issued.

Another resolution seeks to place the responsibility for "culls" upon cheese or butter maker only when they can be proved to be the result of his negligence or inability, an agreement to this effect being made between the makers and the employees on forms supplied by the provincial departments of agriculture.

The conference emphasised the importance of perfect cold storage for dairy produce being provided by rail and steamship companies, both when waiting for and in actual transit.

The use of the fermentation test and the acidimeter by cheese and butter makers was strongly advocated, and it was decided to request provincial departments of agriculture to furnish alkali solutions of the proper strength at nominal cost. To secure uniformity in the strength of the alkaline solution used in the acidimeter it was decided that the strength of the solution so used should be equivalent to ten grammes of lactic acid in a litre of distilled water, and that a ten per cent pipette should be used to measure the

The conference unanimously held that the condemnation of cultures or "starters" is due to their improper use, and so it was recommended that cheese and butter makers should make themselves thoroughly acquainted with the scientific basis of the use of a culture or "fermentation starter," because in butter making, while a good culture is advantageous at all times, it is especially necessary in winter and in connection with pastuerized cream. Only good cultures should be used at any time, and these require frequently renewing. The last clause in this resolution recognises that these fresh cultures should be provided at nominal cost by the provincial departments of agriculture until their more general use warrants their supply by Canadian merchants. The indefiniteness of the term "fin-

thousands: men women and est quality" as applied to butter and cheese called for a pronounced definition of the phrase, and the convention resolved that this standard should be fixed by the Montreal Produce Merchants' Association.

The improvement of the exterior of cheese factories and creameries was and strongly advocated as conductive to health, sanitation, patronage, and it was considered desirable that prizes be offered for those structures presenting It is the thin edge of the prettiest external appearances, the inwedge; the thick end is food. structor being selected to award the
