NARROW ESCAPE.

He who thinks the life of a com-

mercial traveller is all sunshine is

laboring under a delusion. Happygo-lucky though it may seem, dire peril awaits the man who hasn't the faculty of sleeping with one eye open. Peter Zinn, of Hanover, a travelling salesman for the Ball Furniture Co, of Hanover, who is new to "the road" has thus early figured in a hair-breadth escape, saving his life, but losing his overshoes. Bobcaygen, a village in the eastern part of the province. was the scene of the fire, Peter, having put in a good day's work on Wednesday last, having expended his natural eloquence and sunniest smiles to their fullest extent, retired to rest that evening and slept the sleep of the just till three o'clock the next morning. About that time however, the alarm of fire was given and the lodgers in the Royal made a scramble for their clothes. Mr. Rodman Wanamaker, of Philadel- the two animals beside him, the ox Zinn managed to locate his all right, and got in shape for the street in short order, and he saved everything but his overshoes. Writing home he said that had not a sick man been fumes, and gave the alarm. They beef. tests of their cows made at frequent intervals during the whole milking period by a competent man hired for the purpose, Fairly accurate records are thus obtained, not only of the yield of milk and butter fat, but of the amount, kind and cost of feed consumed. The information thus secured has proved remarkably effective in inducing the Danes to adopt better methods of breeding, feeding and

culling dairy cows.

In 1895, when the first testing association was formed, the value of the butter exported from Denmark was \$19,000,000. In 1901, when over three hundred of these associations were scattered over the country, the value of the butter exports amounted to \$29,000,000. and increase of over fifty per cent in six years. It is generally agreed that the great er part of this enormous increase was due to the work of the testing associations in weeding out the poor cows. Not only was the average production of the milking cows largely increased, but so much additional skill in feeding was acquired that the cost of feed necessary to produce a pound of butter is now estimated to be less than two-thirds of what it was when the first co-operative association started operations in 1895

Canadian dairymen who are looking for dividends on their investments should consider these figures. The reports of testing societies showed that the cost of keeping these yearly records was from forty to sixty cents per cow. while the increased dollars per annum Surely this is an eminently satisfactory rate of interest. The extraordinary increase work is appreciated. The tests made by the original associations were sufficient to convince the Danish farmers that they were not dairying on business principles that they were allowing a lot of robber cows to eat better and more profitable methods

The hundreds of co-operative D. cheese factories and creameries doing business throughout Canada prove conclusively that we can work sucoperative factory to the co-operative testing association, and it would seem that metheds which have proved such marked benefit in Denmark could not much longer remain unon Blackwell's Island. Burlows is best hay. After four to six weeks, Chamberlain's Cough Remedy the heeded in this country.
