Mr. Coulson is reported having three wives, one in England and two in Canada. His last marriage took place in Lloydtown in June last.

The news of the death in Toronto on Thursday last of Mr. Geo. Wardrobe, a former resident of this place, was a shock to his numerous old friends, as but few knew of his brief illness. Galvanized But We

Extreme weather changes in Canada is reason why so much Wire Fence rusts at 12 or 15 years sooner than it should. Nearly every Wire Fence is Galvanized thinly to fight off the result of these extremes.

Two-thirds of the life of a Wire Fence depends upon its Galvanizing. Yet, because Zinc costs four times more than Iron, much wire is wiped almost clean of its Galvanizing.

And, besides this, nearly all Wire is "coated" with Zinc. This "Coating" peels off years before the Frost Fence has even shown signs of wear. You see, all Wire, because of its process of manufacture, has a greasy surface. dirt and scale must be thoroughly removed before Galvanizing will stick.

You can't expect Zinc to adhere permanently to greasy, scaly Wire, can you? But Frost Wire goes through three distinct "Pickling" and "Cleaning" processes before it ever sees a Galvanizing Furnace. These three critical Cleanings clear the surface of Frost Wire as clean as a pin, enables Frost Wire to be Double-Galvanized without fear of peeling off.
