THE ENERGY OF RADIUM.

Suppose that the energy of a ton of radium could be utilized in thirty years, instead of being evolved at its invariable slow rate of 1760 years for half-disintegration, it would suffice to propel a ship of 15,000 tons, with engines of 15,000 horse power, at the rate of fifteen knots an hour for thirty years-practically the life-time of the ship. To do this actually requires 1,500,000 tons of coal.—Sir William Ramsay, in London ad-
