SOWING HIS WILD OATS

How many young men can look back on their early life and regret their misdeeds. "Sowing their wild oats' in various ways. Excesses, violation of nature's laws, "wine, women and song"-all have their victims. You have reformed but what about the seed you have sown-what about the harvest? Don't trust to luck. If you are at present within the clutches of any secret habit which is sapping your life by degrees; if you are suffering from the results of past indiscretions; if your blood has been tainted from any private disease and you

dare not marry; if you are married and live in dread of symptoms breaking out and exposing your past; if you are suffering as the result of a misspent -DRS. K. & K. ARE YOUR REFUGE. Lay your case before them confidentially and they will tell you honestly if you are curable. YOU CAN PAY WHEN CURED

We Treat and Cure VARICOSE VEINS, NERVOUS DEBILITY, BLOOD and URINARY COMPLAINTS, KIDNEY and BLADDER Discases and all Diseases Peculiar to Men. CONSULTATION FREE. Books Free on Diseases of Men. If unable to call, write

for a Question Blank for HOME TREATMENT.

Materials and Methods Used In Building Up the Spheres.

ONLY ONE PROCESS BY HAND.

That Is Sewing on the Covers, a Task to Which Machines Are Not Equal. The Yarns Are Wound by Machinery Because Hand Work Was a Failure.

There are few fans who realize just how much work is required in the making of a regulation sized baseball. The centers of baseballs are made of

pure Para rubber in most cases, but the cork center ball, which has been patented, is an exception. The idea of the center piece of rubber, of course, is to give the ball resiliency. If a baseball was made without this center piece it would be "dead"-that is, it would not have the desired bounding qualities, the "life." The centerpieces are generally made to order for the baseball factories. The next process in the making of a ball is the winding on of pure woolen yarn. There was a time when the yarn was wound around the Para by hand, but soon it became necdo the work of man. It was found in torting alms from honest people while the times when the yarn was wound pretending to be in search of employby hand that the man coming to work ment. An unemployed person must at 9 o'clock in the morning was putting make a serious effort to find work. If out better balls than he was in the aft- he does not the authorities will find it ernoon around 3 o'clock. Winding by for him and of a kind that may not be get tired, and consequently the yarn was not wound around the ball tight enough. Many balls were returned to the factory because they did not possess the resilient powers.

Realizing that this personal defect was something which had to be overcome, a machine for the winding purpose was worked upon and perfected. Now all baseballs are wound by mechanical power, and much better work than man did or can do is accomplished. The yarn is wound around the Para under heavy tension, almost to the breaking point. Consequently when enough has been put on the ball is very strong and almost solid, due to the tight tension used. In the days of hand making many balls were soggy and soft because a uniform tension could not be kept by the person winding. There are three layers of woolen yarn over the para. For about an inch in thickness three ply yarn of blue color is used, and over this is wound a thin layer of white two ply yarn. The blue yarn is again brought into use,

but is only of one ply. Naturally it develops that something to cover the wool yarn must be used in order to keep it from unwinding. The ball must be solid, so that when it comes in contact with a bat the threads will not break or move out of place. It has been found that camel's hair stretched yarn is the best for covering the ball after the wool has been put on and the ball is the size desired. This hair is put on, wet, and when it dries a contraction takes place, making the ball more firm and at the same time solidifying it. Only a thin layer of the camel's hair is used, just enough to warrant the wool yarn keeping in position. After the drying process is over a very fine layer of specially made cement is applied by

means of dipping the ball into the fluid. Then the ball is ready to cover. Most balls are covered with alum tan horsehide, the best material, it is claimed, which has been found to be of good use for the hammering which a basebail gets. This is cut into its proper shape by means of pin dies, which also punch small holes around the edge of the hide to be used in the sewing. The ball is sent to the men doing the sewing, which is now and always has been done by hand. Machines have been tried, but not one of them has proved equal to the task. The men who sew on the covers must be experienced and very capable in their work. This sewing process must be done with great accuracy. The work appears to be tiresome and rather tedious, and so it is. A man working at his fastest can

do only two to three dozen a day. With the covers sewed on the finishing up processes come next. Naturally just after the sewing has been completed the seams are rather rough. A good baseball, if one will notice, is smooth over the entire surface, includuse a ball with rough seams, would not mighty mountain delightfully illusbe able to do his best work, as a bulge in the ball would be trying to him. The roughness would make the fingers sore from the continual rubbing. Therefore to do away with this the ball is put in a rolling machine, which presses out the rough seam and makes the ball smooth all over. This done, the trademark is stamped on, together with the guarantee, size and weight of the packing room, where they are speaking up. "It's so they can always tf the ball. The balls are then taken to wrapped in tissue paper and still fur- have a new place to hide the jam."ther wrapped in tin foil. They are then New York Times. sealed in pasteboard boxes and are ready for shipment.

There are surprising numbers of other countries to some extent, but out to keep up one's interest. Don't you baseballs used in this country and in of every 150 dozen it is claimed that find it so? Hobbs-Er-yes-there's but one ball comes back for being in the mortgage on my house, for exbad condition Springfield Republican. ample.—Boston Transcript.

A Technical Move. "What did that young lawyer chap

say, Matilda, when you told him it was time to go?" "He immediately began argument for a stay" Baitimore American

A Slight Mistake In English. Slight mistakes in speaking a foreign language or in understanding it when some one else speaks it are commonly nothing more than amusing, but a member of the Alpine club mentions an instance of a more serious nature. He was climbing with a guide, who persisted in talking bad English instead of indifferent French. The guide had just crossed a snow bridge over a wide crevasse and turned to wait for

the tourist on the further side. He was asked if the bridge was

weak and replied, "No-strong." Naturally the tourist walked boldly across the bridge, which promptly collapsed and dropped him into the crevasse. However, it was not very deep, and when he crawled out looking like a snow man he discovered that his guide had meant to say that the bridge was "not strong."

The tourist then strongly enjoined upon him to reserve his English hencefor use in the valleys.-Ex-

No Loafing In Switzerland. In Switzerland a man may not de-

liberately join the army of the unemployed and remain indefinitely in the ranks without even making an effort to secure employment and in the interval be constantly deteriorating into an unemployable. There is no resorting to charitable institutions as hotels, no wandering about the country exhand was a tiresome job, and toward to his liking, and he is compelled to the late afternoon the men began to perform the work assigned to him. If house, where military discipline is maintained and where every inmate is required to work to the full capacity of his strength, for which he receives as compensation his board and lodging, with wages ranging from 3 to 10 cents per day.

Byron's Curls. Were Byron's curls a natural development? It is an article of faith with his admirers that cut had nothing to do with his ringlets. The youthful Disraeli reproduced them, and his curls certainly betrayed the iron. And if you believe Scrope Davis that indiscreet person was once in a position to surprise Byron's secret process. The two were on familiar terms at Trinity. Davis walked into Byron's rooms one morning and found him still abed and with his hair in unmistakable curl papers. "I thought your hair curled naturally," Scrope remarked. "Confound you, so it does!" the other re-

turned. "I take care of that. But don't you tell anybody." Of course Scrope told everybody. Still, Byron was curly headed at Harrow. And he could not very well have gone to bed in curl papers there.-Pall Mall Gazette.

Cold That Kills and Cold That Cures. In England severe cold generally kills a good many people. In certain parts of North America cold still more severe puts new life into them. It requires no argumentation to show that there must be a definite reason for this. The chief reason is that English cold is mostly damp, while in North America it is mostly dry. There is the greatest difference in the world between dry air and damp air. The former is usually air pure and simple, possessing a full quantity of oxygen and often charged highly with ozone. The latter consists of air mixed with the vapor of water. When the former air, fully oxygenated, is breathed it stimulates more powerfully than champagne. The latter, less oxygenated and charged with vapor of water, not only does not stimulate, but depresses.

A Hunting Incident A city hunter, rigged out in a corduroy suit, double peaked cap, leggings and other picturesque paraphernalia, engaged a small country boy as guide. The two were greatly astonished when a rabbit jumped out from behind a log, looked about and dropped over

"There isn't a mark on it!" exclaimed as if dead. the sportsman. "No," replied the boy. "I guess he must have laughed himself to death."

-Judge. "I and Mont Blanc!" A story of a Prussian lieutenant who stood at the foot of Mont Blanc and with a haughty eye contemplated the

of the German army. "Donnerwetter!" he said, stroking

the vestige of a mustache. "How ridiculously small a civilian must feel!"

Expert Testimony. "I don't see why you women always

want a house full of closets," remarked Crabshaw to his wife. "I know, dad," replied little Johnnie,
