Undertaking receives special attention
EDWARD KRESS

"HAD ALMOST GIVEN UP."
Sarnia, Ont.—"About 27 years ago I was taken very bad, my blood, too, was in bad shape. I got so I had to go to bed and I was there for over three months. I could not eat and suffered untold agony. I had three of the best doctors I could get but it just seemed nothing was going to help me. I had almost given up. I thought I would never be any better than was willing to give up and die rather than suffer as I was. A neighbor of mine told me of Dr. Pierce's wonderful remedies and I decided to use them. My husband brought me six bottles of 'Favorite Prescription.' I had not taken it long until I felt better. In less than six weeks I was out of bed, and in less than six months I was cured and have been well ever since. I do all my own work. I have raised three daughters, two are married and have children. They have used it and they are healthy, so are their children. I am sure it was all on account of my having them use the medicine.
"I keep all of Dr. Pierce's medicines in the house. Have 'Favorite Prescription,' 'Golden Medical Discovery' and 'Smart-Weed'—anything prepared by Dr. Pierce is good. I also have a copy of the People's Common Sense Medical Adviser, which I have had 26 years; it has been very valuable to me."—Mrs. J. W. WATSON, 232 Ontario St., Sarnia, Ont.
If you are a sufferer, if your daughter, mother, sister need help, get Dr. Pierce's Favorite Prescription in liquid or tablet form from any medicine dealer to-day. Then address Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., and get confidential medical advice entirely free.
A most valuable book in any home is Dr. Pierce's Common Sense Medical Adviser. A splendid 1008-page volume, with engravings and colored plates. A copy will be sent to anyone sending fifty cents in stamps, to pay the cost of wrapping and mailing only, to Dr. Pierce, Buffalo, N. Y.
Dr. Pierce's Pleasant Pellets are the original little liver pills, first put up nearly 50 years ago.

SALVING HIS DIGNITY
Mr. Peewee—Madam, your children laugh at me every time I pass. Mrs. Kidmore—You mustn't mind those foolish children. They giggle at every foolish little thing they see.

Talcum Toilet Treat
A good Talcum Powder is a necessity and a luxury for the summer toilet. It keeps the skin soft and dainty, prevents sunburn and freckles, assures a comfortable appearance and absorbs perspiration. Its use is a delight. We have most of the best-known brands and in a variety of odors.
10 to 50 cts.
Our line of Toilet Goods is unequalled. Our prices as low as is consistent with the quality of our goods.

ELECTRICITY IN HOMES
Canadian Housewives Encouraged to Use It in Summer
The use of electricity in the home is gradually developing. Its original utility as a source of light has been extended to the supplying of energy for the electric iron and toaster, the sewing and washing machines and the vacuum cleaner. Electric ranges are coming into general use, the first objection, the relatively high initial cost of the range, having been overcome. One domestic use which electricity seems admirably adapted but which, thus far, has received insufficient attention is that of providing hot water. In many Canadian homes, the furnaces or coal ranges are provided with attachments to supply hot water for the kitchen, bath room and laundry during the winter months. As the furnace remains unused from the middle of spring and coal ranges are not regularly used during summer, the supply of hot water throughout the house is lacking from May to November. Supplying this service by electricity is a great convenience to the householder, and, at the same time, opens a new field for the desired summer organization dealing in electric energy. Several Canadian central stations, aware of the benefits to be derived from such a load, have introduced special systems of charging for this service. In Toronto, one organization has an arrangement with one small (500 watts) and one large (2,000 watts) heating unit; the idea is to charge for the small unit on a moderate flat rate basis and keep it operating constantly for ordinary domestic needs, while the large unit, which need be used only for abnormal requirements, such as laundering, is charged for at a low meter rate. The cost of the installation, including the piping, plumbing, etc., is \$30.00. Many companies do not meter the consumption of the hot water heater, charging a monthly flat rate for this service.
These companies have also been encouraging the "hooking-by-wire" movement; usually, it is stipulated that water heater and range are to be served through the same double-way switch so that both the range and the heater are not operated at the same time. The water heater is usually kept on continually except when using the range; thus, the boiler is heated over night and, if properly jacketed with non-conducting material, remains hot enough through the day to supply the demand while the range is in service.

SPRING FIRE-PEAK
If the forest fire ranger was represented by a line rising and falling as the danger increased or decreased there would be a sharp rise or "peak" in the few weeks after the winter snow leaves the woods. This is so much the case that the term "Spring Fires" is well known to every forester. The danger is not the dry, dead leaves and the least spark may start a fire that will sweep whole miles of forest. All who go to the woods are cautioned to see that they are especially careful to put out completely their camp fires and to see that no fires start from matches, pipes, cigar stubs or fire crms. Canada has many fire guardians on duty in the spring but if these rules are observed much more timber will be saved than can be saved through the most strenuous efforts of fire fighters. The time to stop a forest fire is before it starts.

NEGLECTED FISH PAYS
Varieties, Once Despised, Yield Good Returns in East
There are some fishes which, though not always wasted entirely, are by no means fully utilized. One of these is the horse-mackerel, or tuna, a huge fish which sometimes reaches a weight of two or three hundred pounds. M. Pierre Lemy, a large Parisian merchant engaged in the prepared food business, says that, after the sardine, the tuna is the most important as a preserved product. There is an upward tendency in the price of these fish at present in the world's fish markets. Years ago, in the world's fish markets, there is a special fleet of boats engaged in capturing sword-fish. Eighty of these fish were caught in 1915 at Ingonish, C.B. They ranged from 300 to 400 pounds in weight, and one was caught at Sydney which weighed 565 pounds. At four cents a pound, such a fish would be a prize for a fisherman. In Boston or New York, the price of sword-fish to the consumer was then about 25 cents per pound. Thus, this once neglected fish yielded ample returns. The same thing is true of sturgeon. A generation ago sturgeon were thrown up on the beach of the St. John river for manure; now, in some cases, good lake sturgeon are worth as much as a good-sized cow. Thirty cents per pound has been paid for sturgeon in the New York markets, and the weight ranges from 30 to 100 pounds.

Why Hurt Oneself?
Why will so many cyclists go laboring up stiff or "holding" hills when it is so palpable that they are overdoing it, and that the effort is beyond their normal strength? To the weaker brethren it is nothing short of a perilous proceeding. There is no loss of dignity in walking hills—indeed, there is positive refreshment in it sometimes; yet one frequently sees cases where one would gladly give advice were it not impertinent. Outside racing circles, there are only two legitimate excuses for desperate hurry—going for the doctor or the fire engine. Speed between points is no longer a fetish of cycling.

The British business man looks at the business he has got. That's the death of business. He ought to look at the business he hasn't got.—Herbert N. Casson.
Don't allow duck feed to stand from one meal to the next and expect ducks to be satisfied with it.

HELP FOR INEBRIATES
Ontario Act Makes Provision For Their Care and Cure
The London Advertiser says: One of the acts passed at the 1916 session of the Ontario Legislature that deserves some mention was "an act to amend the hospitals for the insane act." This act made provision for the admission, as a voluntary patient, of any alcoholic habitual, by the superintendent of the hospital, for care and treatment, but the patient must be capable of appreciating the fact that he is to be admitted as a voluntary patient. The time during which he may be detained is limited to one year. Of course the patient must agree to comply with the rules of the hospital. The patient may be discharged cured or incurable, or for breach of the rules.
Another important provision is that with respect to those so given over to drunkenness as to render them incapable of self-control, or of managing their own affairs. In such cases a judge in chambers, or a magistrate, if applied to by a relative or connection of the inebriate, or by the family physician, may cause a petition to be served on the inebriate setting forth the facts, and appointing a time for the hearing of the application. The hearing is to be conducted as other proceedings in courts are, and the judge or magistrate is to report the facts to the inspector of prisons and charities, and transmit the evidence to him.
The inspector may have the inebriate placed in a hospital or placed where he will be detained and treatment administered for a period not exceeding two years. And the judge or magistrate may have the inebriate in some safe and comfortable place, but not in a jail, prison or reformatory. This is a humane act in the true interests of the public, the inebriate and his families. One wonders why such legislation has not long since found its way to the statute books. The credit is due to one of the young members of the Legislature, a former Londoner, Thomas Hook, member for South Toronto.

NEITHER FOOD NOR DRINK
As an illustration of the keen sense of humor possessed by the famous Scottish judge, Lord Mackenzie, Sir J. H. A. Macdonald, late Lord Justice-Clerk, tells the following story in his Reminiscences. On one occasion when the jury had retired to consider conviction or acquittal, they rang their bell, producing the usual stir of anticipation in court. It turned out, as reported by the mace, that they rang to ask if they might be allowed to have some water while they were in deliberation. According to the law of Scotland, it is forbidden, when a jury has been enclosed, that they should be suffered to have any "meat or drink" until they have returned the verdict. Everybody listened to hear what the judge would say. Lord Mackenzie, looking up meditatively, delivered himself in slow and deliberate tones, heard throughout the court, thus: "Well, ye canna call it meat" (and then more rapidly), "and it sairly isn't a drink; they can have the water."

BRIQUETTING LIGNITE
Prairie Provinces Might Adopt New Method and Save Money
Manitoba, Saskatchewan and Alberta contain many millions of tons of sub-bituminous coal and lignite but the comparatively low heating value of this coal and the fact that it disintegrates rapidly when exposed to the air prevent its economical transportation for any considerable distance. In fact, these provinces are now supplied almost entirely by coal from the Crow's Nest district in Alberta and British Columbia and from the United States.
In a plant in Denver, Colorado, with a capacity of 500 tons of lignite per day, lignite is distilled, the by-products are saved and the residue is manufactured into briquettes. These briquettes are of very good quality, and are suitable for domestic or railway locomotive purposes. The lignite is charged into ovens having a capacity of 10 tons each. The ovens are heated by gas flame between the walls, and distillation is carried on for about two hours without the admission of oxygen from the atmosphere. During distillation about 100,000 cubic feet of gas, 120 gallons of tar and 25 pounds of ammonium sulphate, are removed per 10 tons of lignite. Benzol is removed from the gas and the gas is cleaned by electrical precipitation. While the raw lignite only contains 55 per cent. of fixed carbon, the briquettes average 84 per cent.

Curious Sinecures
It will be interesting to know, if an all-round reduction of Government salaries takes place, whether the Bishop of Ripon will lose his \$35 a year for acting as Clerk of the Closet, or the Usher of the Order of the Garter, or the Duke of Hamilton and Brandon receives \$225, as Hereditary Keeper of Holyrood Palace. Of course, these are only types of long-standing sinecures which have been in existence for many, many years.

Tar Ruins Appearance
Tar is one of the worst enemies of a fine finish to a motor car and should be taken off as soon as possible. Taken off when it is fresh, no detrimental effect will be noticed, but if allowed to dry it will gradually get into its destructive work of eating down through the varnish coats to the wood or metal. In any case, the new car should shun the freshly-oiled road if there is any way of doing so.
