## A BUSH FRUIT ENEMY

flow to Control the Currant and Gooseberry Worm.

The Caterpillar Described-Comparatively Easy to Kill - Popular Varieties of Strawberries - Calf Feeding a Real Problem.

(Contributed by Ontario Department of Agriculture, Toronto.)

The most common insect enemy of currants and gooseberries is the currant and gooseberry worm. The larvae attack the foliage of gooseberries and of red and white currants but seldom injure that of black currants. At first they work chiefly in the central part of the bush, stripping the leaves nearly all off there and doing much damage before they are observed. Later they may devour the foliage any place. It is common to see nearly all the leaves eaten off numerous bushes. Life History.

The life history of the insect is as follows: The adults, which are known as sawflies, are small fourwinged flies about a quarter of an inch in length. The female has the abdomen yellowish and the rest of the body blackish in color. The male is for the most part blackish or black. The flies appear in spring very soon after the leaves have expanded. Eggs are laid on the under surface of the leaves in chains along the main veins. The young larvae on hatching feed upon the foliage, and become full grown in two or three weeks. Then they drop to the ground and form little cases in which they pupate, a new brood of flies emerge, lay their eggs, and from these there comes a second brood of larvae which may be seen on the plants at the time when the currants are ripe. When these larvae are full grown they enter the soil, form little cases or cocoons, and remain there till the next year, when they pupate and emerge as adults.

Method of Control.

These are easy insects to kill. All currant bushes and gooseberries should be sprayed with from two to three pounds arsenate of lead paste, or half that amount of the powder form, in forty gallons of water as soon as the leaves have become well expanded. Particular care should be taken to spray thoroughly the inner their creditors. parts of the bush. This will kill all the first brood. If a second brood appears hellebore should be used instead of arsenate of lead, in the proportion of one ounce to one gallon be dangerous on the ripe fruit. The insect occurs everywhere in the Province, and everyone should prevent his plants being weakened and seriously injured by it, especially as it is so easy to control.

Note: Helebore loses its insecticidal properties unless kept in airtight packages .- L. Caesar, O. A. College, Guelph.

## Popular Varieties of Strawberries.

From the beginning of commercial strawberry growing, about 1800, the Large Early Scarlet was the leading variety grown in the United States. About 1860 the Wilson replaced this variety, because it was much firmer and was more suitable for shipping to distant markets, and its hardiness and good bearing qualities helped to make strawberry growing more popular in Ontario. From about 1880 varieties began to replace each other in more rapid succession, until at present 25 sorts constitute about 90 per cent. of the total commercial strawberry acreage. The Klondike, the leading variety in the Southern States, heads the list, constituting 28 per cent. of the total strawberry acreage. The Aroma, the favorite Some O.A.C. approved 6-rowed variety in the South Central States, is second with 13 per cent. of the 4203 total acreage, while the Dunlap in the Northern States ranks third, with 10 per cent. In Ontario among the most popular varieties commercially are the Glen Mary, Williams, Dunlap, Gandy, Splendid, Parsons, and Sample. Among the fall bearers the Superb and Progressive are preferred.

## Feeding the Cow Before Calving.

The proper time to begin feeding a dairy cow is six or eight weeks before calving, and practical dairymen agree that this preparation has more to do with the amount of milk and butter fat which a cow produces during the lactation period than does horsepower, in good running order, the feeding during any other period. For cows calving during the summer or early fall most dairymen like to have a small pasture away from the herd but with an abundance of grass, and, in addition, they like to 3 16 tf | feed a suitable grain mixture. Coin silage, with clover or alfalfa hay and a limited grain ration of three parts ground oats, two parts of bran, and one part of oil meal is especially good for cows calving during winter or early spring. After calving the cows should be brought slowly up to full feed and thereby steadily to a higher production.

## Feeding Young Chickens.

Young chickens should be fed from three to five times daily, depending upon one's experience in feeding, says | regard only to the claims of which | In town of Durham, comprising the United States' Department of they shall then have notice, and that Agriculture. Undoubtedly chickens the said executors will not be liable can be grown faster by feeding five times daily than by feeding three times daily, but it should be borne in of to any person or persons of whose mind that more harm can be done to claim notice shall not have been rethe young chickens by overfeeding than by underfeeding, and at no time should they be fed more than barely to satisfy their appetites and to keep them exercising, except at the evening or last meal, when they should be given all they will eat. Great care must be exercised not to overfeed young chicks that are confined, as leg weakness is apt to result.

#### PHOTO OF 31st REGT. OFFICERS ON EXHIBITION IN OWEN SOUND Problems of (Owen Sound Sun-Times.)

A fine photo of the officers of the old 31st Battalion, taken in 1893, was presented to the officers of the new Grev Regiment by Mrs. William Masson, wife og the late Capt. Masson, who was at that time paymaster of the 31st. The photo is by Craig and is quite a work of art. The gift is very much appreciated by the officers of the Greys.

their low grade hogs to Germany, being sent out. When the war was over they had nothing but the best quality and type bacon hogs in their breeding herds. It resulted in their winning British bacon market last year.

Some farmers may feel that 10 per cent. is not a large cut in price It will be a loss on every 200-pound pany, of the Town of Durham, has hog sold at 12 cents pr pound of \$2.40. Some claim they can fatten a fat type hog much cheaper than the bacon type. Experiments at the O. all their estate, credits and effects A.C. prove that contention is only an

In Grey County during 1920 farmers sold 93,282 hogs valued at \$2,947,-711.00. A large part of those were exported. The greatest bulk of them were sold in Britain. Last year the Canadian trade was supplanted by the Danish. The British market has a limit. If one country will not protrade will be lost to a more aggressive nation. That is what is occurring to-day. Canadian bacon is being ousted and the loss of the British market is sure unless the Canadians waken up. Can you afford to let it go? Wlil you? The answer lies in a steady production of uniform bacon type hogs, perfectly finished and graded. Let the Markdale Department of Agriculture have your opinion. This would be specially valuable in view of a coming conference of agricultural representatives and others in the near future.

## School Fair Material.

The orders for the School Fair maassets of the estate amongst the terial have been sent out except the eggs and petatoes. We hope to start delivering eggs about April 24. The potatoes have not come from storage

### All Men and Women

When in Need of a Tonic Should Start on the Road to Wellville by Following This Advice

Peterboro, Ont.—"I can speak in the highest praise of Dr. Pierce's

medicines. I suffered for a long time with feminine weakness, through which I became all rundown, weak and nervous. I also had severe backaches, pains in my side and bearing pains. I learned of Dr.

Pierce's medicines and began at once to take them. I took two bottles each of the 'Favorite Prescription' and the 'Golden Medical Discovery' and they completely cured me of all my weakness and restored me to good health.

"At one time my husband became afflicted with a chronic cough which caused him to become all rundown. He got so thin he was almost a skeleton. He tried many medicines but did not get any better until he took Dr. Pierce's Golden Medical Discovery. By taking this medicine he was completely restored to good
