Other Papers' Opinions

Is the Criticism of Big Salaries Justifiable?

(Christian Guardian.) To the average man whose salary does not go beyond \$1,500 or \$2,000 a year, the knowledge that a banker, or a railway head, or the superintendent of a great business, gets \$50,-000 or even \$100,000 a year seems to emphasize the unfairness of things, and he is apt to say that he himself is getting all too little, while the man with the big salary is greatly overpaid. And as he looks at his wealthier brother, and notes his short ual toil, and his freedom, also, from the worry of making both ends meet, he is apt to grow a little bitter, and to look upon the big-salaried man as a robber, whose big income is derived from a kind of legal economic blackmail levied upon his poorer brethren. Unquestionably, this view is widely held, but is it really justifiable?

For instance, suppose we acted upon it and reduced the salary of the railway manager to \$2,000 a year, would we be the richer or poorer greater interest in their schools. for it? The man who knows anything about railroading knows that the railway manager's mistakes are apt to be costly, and inside of a year poor management may easily cost a railway not \$100,000, but millions of dollars, and if high salaries mean efficiency then the railway and the country will be better off by millions of dollars if they pay \$100,000 for management rather than \$2,000 for gainst mismanagement, but we think they are a better guarantee than low salaries would be.

institutions have not been particularly successful, and one reason seems to be that the board of management insisted upon keeping down the salaries. But in California salaries are being paid in co-operative undertakings, in some cases as high as \$30,000 a year. It is easy to argue that no man is worth \$30,000 a year, especially if those who are paying the salary are themselves not earning one-tenth of it; but on the other hand when one mistake of the manager may cost a company many times \$30,000, it is clear that if we can avoid the mistakes by employing a \$30,000 man, we are getting off cheaply.

And even our Labor executives are learning the lesson and are paying. \$10,000 and \$20,000 to trusted and responsible leaders. One argument which is advanced for this is that it lessens the possibility of a trusted not so sure of this, for it seems to us that if a man can be bought at all, then it is simply a case of the highest bidder, and a salary of \$17,millions of dollars may be involved. And, yet at the same time it does seem like tempting Providence to pay a man a starvation salary when we know that he will inevitably be exposed to great temptations to acquire wealth suddenly by illegitimate means. We cannot guard anot tempt men to dishonesty by paying too small ones.

We know that this is an unpopular is decidedly opposed to big salaries, in favor of urban advantages. and yet we think that we must face the matter squarely, and we should tinued, so long exceptional ability will inevitably command exceptional rewards.

ministerial salaries is clear enough, way understood by everyone. and the Church is slowly awaking to the fact that it is not conducive either to the Church's progress or to is difficult for him to pay his debts and at the same time live decently. We should be sorry to see the minsorry also to see it distinguished by the fact that it did not pay a living salary to its trusted and honored leaders.

We cannot pay the prophet for his toil, but at least we can see that he is assured of a comfortable and sufficient sustenance.

Not a Fair Test.

(Woodstock Sentinel-Review.) Roscoe Arbuckle, having been acquitted by a jury, is now, it seems, to be tried by public opinion. One of his films is to be released and the question of whether or not he is to remain in the movies will be determined by the way the public greets the picture. It is scarcely a fair test. The public goes to the movie theatre to be amused, not to sit in judgment on the moral characters of those who furnish the amusement.

Job and Lloyd George.

(Ottawa Citizen.) Job made for himself a lasting reputation for patience. And he hadn't the jealous French, the recalcitrant Germans, or the greedy Russians to deal with. David L. George could have endured Job's disappointments without the slightest abatement of his enjoyment in the game of diplomacy.

> Skill Required. (Wayside Tales.)

Two Irishmen were standing in the stern of a Channel steamer. Said Mike: "Oi can't see how the captain foinds his way across the Channel at all. Now, if he was goin' the other way he'd only have to follow the whoite streak of foam there. But if ye go up to the other end of the boat, ye'll foind there's never a mark to go by."

FEEDING AS THEY AFFECT THE.

(Experimental Farms Note.) Food supply as well as heredity exercises a controlling influence on the character and development o the growing animal. In order to at tain maximum development, the normal individual requires certain specific food constituents in well defined quantities. A failure to supply these or an abnormal supply of one or more of the required elements will result in more or less altered character and development.

The animal body is constructed

from fourteen chemical elements and because these are not all available in any one food, it is necessary t resort to a variety of feeds in order that the body tissues may be permitted to function normally. The of the elements in greater proportions than other feeds has been utilized as the basis from which the proper computing of rations for the needs of the particular individual has been derived. It has been convincingly demonstrated that different animals and also the same animal require the various elements the earlier stages of an animal's life tionally greater mineral and protein requirement, these being utilized in the formation of bone and muscle, varying proportions make a very and a relatively smaller amount of energy-producing food requirement,
