MEAFORD MAN KILLED IN WEST

William Robinson, a well-known Meaford young man, a son of Mr. and Mrs. J. P. Robinson of Meaford, was instantly killed when he was struck by a passenger train on Wednesday near Outlook, Sask., says the Meaford Express. The sad news of his death was received on Thursday, but as yet no details of the accident have arrived except that the body was so badly mangled that it would be impossible to send the remains home for burial. However, the members of his Odd Fellows Lodge in Toronto and his parents are making efforts to have the remains interred in the Meaford cemetery.

The late Mr. Robinson was 23 years of age and was born in St. Vincent, although his parents are now residents of Meaford. He enlisted in the 147th Battalion in August, 1916 and served overseas with that unit and served in France until the end of the war, when he returned to Toronto and took a civil re-establishment course. He went West nearly two years ago.

POINTS ON PASTURES

Some Interesting Facts About Grasses and Cropping.

Sod-Bound Fields and the Remedy
—How Pasture Plants Grow—
Good Pasturage Cheap Stock Food
—Treatment of Beef Calves.

(Contributed by Ontario Department of Agriculture, Toronto.)

We frequently hear the word "sod-bound" applied to grass areas, when people are discussing the failure of pastures. The meaning that the word sod-bound is intended to convey is that there are too many plants to each square foot of area. Such condition is rarely true. Pastures seldom fail because of too many plants or over population, but they do fail through the exhaustion of the available plant food supply. The ploughing up of old sod lands, thereby causing the roots and stems to decay, brings about increased available plant food, and this followed by re-seeding, while effective, is very expensive. It is cheaper and usually better practice to adopt methods of turf improvement. It takes years to develop a good sod, so why destroy by inverting it with the plough, when surface applications of available plant food will make such profitably productive. To those who may think that the "sod-bound" condition cannot be remedied by any practice other than ploughing and re-seeding, I would suggest that they stake off a square rod of dense sod and apply to it either one pound of nitrate of soda or a wheelbarrow load of stable manure. Conviction guaranteed.—L. Stevenson, Secretary Ont. Dept. of Agriculture, Toronto.

How Pasture Plants Grow.

The ability of grasses to withstand continued pasturing is due to the fact that the leaves are being pushed up or grow from the lower or attached end. Nibble off or cut off the upper portion of the grass leaves and the leaves will lengthen again and again so long as there is warmth, food and moisture. With the clover plant it is different. If this type of plant is cut or eaten off new buds must form, unfold and grow into stem bud and leaf. Clovers if pastured will not yield in feed more than a fraction of what such would produce if the plants were permitted to develop fully. The fact that the bitten blades of grasses will push up high enough after a few days to produce a second and a third bite makes it possible to pasture grasses with no injury to them. With reasonable care and management the grazing of grass areas may go on indefinitely.—L. Stevenson.

Good Pasturage Cheap Stock Food.

One of the cheapest live stock foods is good pasturage. Good yields of this cannot be secured unless the land is kept in good condition. A generous top dressing with good barnyard manure applied in the fall, winter, or early spring is recommended. This top dressing should be distributed evenly and not too thickly. If bunchy, it may be thinned out by harrowing which sometimes helps to stimulate the growth. Thin spots in the pasture should receive a new seeding of grass. The use of a mixture of six pounds of timothy, two pounds of red clover and one pound of alsike clover to the acre will give good results. Where there is a partial stand of grass, possibly not more than one-half of this quantity is needed. Only the thin spots will require treatment. Alternate freezing and thawing and the early spring rains will work the seed into the soil and result in quick growth. Let the grass get a good start before the stock is turned in. Nothing so depletes the annual yield of pasturage as to overstock it at the beginning of the season.

Good Treatment of Beef Calf Pays.

The most profitable beef animal is the one that has the capacity to eat and manufacture into beef the greatest amount of feed, and not the one that can subsist on the least and poorest ration. There are thousands of young beef cattle that can eat plenty of feed, but many of them are not able to manufacture much beef out of it, largely because their growth was stunted, their vitality weakened, and their beef conformation lost through lack of proper and sufficient feed when they were calves.

Red Spiders.

The red spider does a considerable amount of damage to garden crops at this time of the year, during the dry, hot weather. These mites feed principally on the underside of the leaves, causing the foliage to lose their color, having a whitish, bleached appearance, and the plants become stunted. The damage is done to the plants by the mites sucking the juices. This troublesome pest is easily controlled by the free use of cold water applied under pressure, directing the spray to the underside of the leaves. If the water is not effective, the sulphur-soap solution is made up in the following manner: Flowers of sulphur, one ounce; laundry soap, two ounces; water, one gallon. Dissolve the soap in the water and then add the sulphur and apply to the mites.

Poultry Notes.

Cleanliness is one of the greatest means of combating lice, mites and fleas and other insidious insects which prey on poultry. Not more than two geese should be allowed for each gander, and what is better yet is to have them in pairs during the breeding season. Grit is essential to the health of the fowls and to economy in feeding, as it takes the place of teeth in preparing the feed for further digestion.

THE NEW NORTH
A SPORTSMAN'S PARADISE

To men who spend their vacation fishing, hunting or canoeing, Canada is first among countries of the world for the opportunities it affords for indulgence in either of these inviting, invigorating and exciting pastimes.

But there is one part of the Dominion which is particularly inviting to the sporting fisherman, the big game hunter or the canoeist. It is what is aptly termed "Canada's New North," reached via Cochrane, and comprehends that vast stretch of virgin country contiguous to the Canadian National Railways, Transcontinental Division—extending across the upper part of the Provinces of Ontario and Quebec for a distance of over a thousand miles, with Hudson's Bay as its northern limit. To quote a traveller who knows it well: "It is a virgin country just as God made it."

To the sportsman this northern country is a veritable paradise. Within its vast forests there roam at will all species of big game common to the North American continent. Of the big and burly moose it is the home. Red deer have a wide range and in some sections are numerous, while caribou are to be had by the hunter who seeks them in their feeding grounds. In several districts bear are to be found, while the smaller fur-bearing animals are common to a wide range of territory.

Disciples of Izaak Walton will find in the numerous rivers and lakes all that the most ardent of them can desire, both in regard to extent and variety of fish which abound in their waters. Lake, or grey trout, ranging in weight from six to twenty pounds, are common to several of the lakes. Water in which speckled trout abound are easily accessible, although naturally, the more remote the districts the better the sport. In some of the rivers and streams are to be caught speckled and brook trout (known also as the square tail trout) weighing from five to seven pounds. Good bass fishing is to be had in certain parts, and particularly in north-western Quebec. One specie of fish which is common to some of the older parts of Canada not found in this far-northern country is the maskinonge. But in some of the waters flowing into James Bay are to be caught the lordly sturgeon, sportsmen having landed fish of this species ranging in weight all the way from twenty to two hundred pounds. In the waters contiguous to Hudson's Bay excellent salmon fishing is occasionally experienced. Pike and pickerel are common to the waters of this northern wild.

To the canoeist who seeks adventure in the territory beyond the fringe of civilization the waters of the northern parts of Quebec and Ontario afford ideal facilities. Rivers, many of them mighty streams, which for generations have served as highways to adventurers, fur-traders and trappers bound to and

MAIL CONTRACT

Sealed Tenders, addressed to the Postmaster General, will be received at Ottawa until noon, on Friday, the 4th August, 1922, for the conveyance of His Majesty's Mails, on a proposed Contract for a period not exceeding four years, 6 times per week on the route, Durham No. 1, R.R. from the 1st October, 1922 next.

Printed notices containing further information as to conditions of proposed Contract may be seen and blank forms of Tender may be obtained at the Post Offices of Durham and Dornoch, and at the office of the District Superintendent of Postal Service.

District Superintendent's Office,
London, June 23, 1922.
D. J. McLEAN,
District Superintendent
of Postal Service.

Post Office Inspector.

613

from Hudson's Bay, are almost beyond compute in number, the country being grid-ironed by them. Wonderfully interesting canoe trips, either extended or limited, are available. Take, for example, the six routes to Moose Factory, all of which find their way into Moose River about 30 miles south of Moose Factory on James Bay.

Until within recent years this great new north was inaccessible to those who had but a few weeks' vacation at their disposal. It could not even be reached during an ordinary vacation term. Now, over the lines of the Canadian National Railways, the sporting fisherman, the hunter, the canoeist and holiday seekers in general can, occupying en route modern appointed steel-constructed trains, reach points in this "Happy Hunting Ground" in the course of 24-hour journey from such centres as Toronto and Montreal, and from New York, Chicago and Boston in approximately thirty-six hours.

And there is an interesting little booklet entitled "Where to Hunt, Fish and Paddle in the New North," obtainable from any office of the Canadian National Railways, which enables the holiday seeker to select his camping ground in this primeval paradise.

A number of sectional maps covering the sporting territory from west of Lake Nipigon to Western Quebec, in which are shown canoe routes and

trails, will prove invaluable to the sportsman visiting the territory.

The booklet also furnishes information regarding guides, outfit and other necessary details. 6292

FORMER DUNDALK BOY IS ORDAINED A PRIEST
(Dundalk Herald.)

Rev. J. D. Egan, son of Mr. and Mrs. J. B. Egan, formerly of Dundalk, is at present visiting his cousin, Mrs. S. D. O'Connor, and other relatives in the vicinity, and is receiving congratulations from his many friends. On June 10, Father Egan was ordained in St. Mary's Cathedral, Hamilton, by Bishop O'Brien of Peterboro. He celebrated his first mass in St. Cecilia's Church, West Toronto, and on June 18, celebrated mass in St. John's Church, Dundalk, which was crowded to its capacity by old time friends and acquaintances. An eloquent sermon was delivered by the pastor, Rev. Father Cloherty, and he also expressed welcome and encouragement for the new priest. Special music was rendered by the choir.

A large congregation welcomed the young priest at Proton Parish Church for evening devotions.

Monday afternoon and evening, Rev. Father Egan, his mother and father and sister, Miss Marie, received many of their old Dundalk friends at the home of Mrs. O'Connor.

Father Egan has been appointed to the parish of Hanover, to become effective on July 1.
