MAKING FARM CHEESE

The Manufacture of Cheese In the Home Diary.

Preparing the Milk - The Work of Coagulation—Cutting and Milling -A Home-Made Press - After Care of Cheese—Co-operation Will

(Contributed by Ontario Department of Agriculture, Toronte.)

For every nine or ten pounds of cheese required, use 100 pounds of milk (10 gallons). Take the fresh night's milk in a vat, or some clean vessel suitable for holding milk. water in it, or by setting the vessel containing the milk on the stove and stirring.

Coagulation. Use one teaspoonful of rennet for every 25 pounds of milk. First dilute the rennet with a pint of cold water, three minutes.

Cover the vat until coagulation takes place, which will be in about breaks clean across the finger without

214 tf are best. Use the horizontal knife position? first cutting lengthwise of the vat, then cut both lengthwise and crosswise with the perpendicular knife.

After the curd has been cut, it should be gently stirred with the hand, or with a small wooden rake for ten minutes before applying heat. Heating. Heat the curd 98 degrees Fahren-

heit, taking about thirty minutes to do so. Continue stirring until the curd is ready for dipping; usually about two and one-half to three hours from the time the vat was set. When the curd becomes firm and springy and falls apart when a handful is pressed together, it is ready to have the whey removed.

After drawing off the whey stir the curd over once, then pile it evenly at a heavy cotton cover. In about twenty minutes the curd will be well matted when it should be cut into blocks after dipping.

Milling. Knife may be used in place of a curd mill. Cut the curd into strips about the thickness of your finger,

pounds of milk. Sprinkle the salt over the curd, mix it thoroughly and when the salt 84 degrees.

The cheese hoop, or hoops, should be made of heavy tin with two handles on the outside. A suitable size for home use would be seven and eight inches in diameter and twelve or fourteen inches high.

Place a piece of cotton at the bottom of the hoop, as a temporary cap, then put the cheese cloth bandage inside the hoop. Carefully pack in the curd, fold over the end of the bandage, place on top a piece of cotton similar to the one at the bottom, put on wooden follower, and put to

A Home-Made Press.

If a press with a screw is not available, use a lever press. Take a piece of scantling ten or twelve feet long for a lever. Place the cheese hoop on 1242m a strong box about three feet from the wall. Nail to the wall a piece of scantling and under it put one end of the lever. Put a block of wood on top of the follower for the lever to rest on. A pail containing stones Do not apply full pressure at first.

In three-quarters of an hour the cheese may be taken from the press, the bandages wet with hot water, pulled up smoothly and trimmed neatly, allowing one-half an inch to lap at the ends. Cover the ends with Saunders, Gent's Furnisher, Durham. | circles of stiffened cheese cloth, over 117tf that place a piece of cotton dipped in hot water. Return the cheese to the press until the following morning, when they should be turned in the hoops and pressure continued a few hours longer. After removing the cheese from the press, place them in a cool, dry cellar to ripen.

After Care of Cheese. Turn the cheese end for end on the shelf every day for a month and afterwards occasionally. These cheese will be ready for use in about

wheat, Peas, Oats and Mixed Grain six or eight weeks. To prevent the cheese moulding, much, they may be dipped in hot removed .- Dept. of Extension, O. A. College, Guelph.

Co-operation Will Win. "Competition is no longer the life

forces leading us to bigger things and 104tf | they must co-operate. One is finance and the others are labor and the must standardize our products so the buyer will know just what he is to get."-Peter G. Ten Eyck before Oneida County Farm Bureau.

Problems of the Farm

Contributed by Grey County Department of Agriculture

Co-operative Sale of Cull Poultry.

Last July in Oxford County there were over 20,000 hens culled by Oxford County men trained by the Poultry Department, O.A.C., at class held in Woodstock early in the month. Out of this 20,000 there were 5,911 birds shipped to Buffalo and morning's milk and mix it with the New York. The work was conducted in celery watered during the dry by Mr. T. A. Benson, poultry pro- periods. moter, Western Ontario, Federal Department of Agriculture, and G. Heat the milk to 86 degrees Fahren- R. Green, agricultural representaheit, by placing a clean can of hot live Oxford County, representing the well rotted manure for a row of Provincial Department.

the shipment from Woodstock weighed 23,438 pounds. Some did not ship their culls with the car

17 cents to 26 cents per pound. The manure, and to this add acid phosin July when hens are in demand by the Jewish trade.

While perusing the article relative to the sale, the possibility of scatter a coating of manure broadtwenty minutes, depending on the duplicating the same thing in Grey cast and work it into the soil adding ripeness of the milk. When the curd County was considered. If there is acid phosphate as well, and on this breaks clean across the finger without a sufficient number requesting hens acid phosphate as well, and on this culled this year, there might be a good celery can be grown. A well FOR SALE.—TWO HORSES, 2 SETS any flakes remaining on it, it is ready possibility of holding a training balanced 4-8-5 commercial fertilizer school so that quite a number of at the rate of 2000 pounds per acre Grey County people could be taught scattered broadcast and well mixed For cutting, regular curd knives the simple art of poultry culling. What do farmers think of this pro-

Wool Shipping Season.

Last year 2,700 shippers sent their wool to the Canadian Co-operative good garden soil in about two weeks be seen that it takes about two ization has followed the recognized after planting; during this time the months to develop good plants. extending the period of marketing and extending the field of markets.

Because of the work done by the Canadian Co-operative Wool Growonly to sell large quantities of Canadian Wool to Canadian manufacturers, but to dispose of 600,000 lbs. to manufacturers in England, 50,000 pounds to the continental buyers of Europe and considerable to the United States, in spite of the heavy Fordney tariff on wools.

Nitro Culture.

Orders for Nitro Culture are comabout four inches square. Turn the ing to hand quite freely. As usual, blocks about every twenty minutes some do not state the variety of seed until the curd comes flaky. This is the Culture is required for. As each usually about one and a half hours alfalfa, red clover, mammoth clover, ferent culture, it is necessary to state the kind of seed to be sown.

The Morris Piano Company at Lisstir well, and apply salt at the rate of towel is closing down. Lack of funds one ounce for every twenty-five is the reason given. A Chesley firm has been negotiating for the purchase of the plant but so far nothing is dissolved the curd will be ready has come of it. One or two other to put to press at between 80 and firms are also in touch with the Listowel Chamber of Commerce.

CELERY CULTURE.

(Experimental Farms Note.) Any good rich garden soil will grow good celery. It is a gross

feeder and must have an abundance of fertility to draw upon if tender, well-developed stalks are to obtained. If the soil becomes dried out, even with an abundance of plant food present succulent stalks are not likely to develop. These two things, plant food and moisture. are essential in order that growth may go on unintererruptedly. Hot dry soils can be made cool and moist by water or by mulching. It is not a very great task to keep a small area

When preparing for your vegetable garden set aside some good celery. Dig or plough out a space The 5,656 hens which were sent in about 18 inches wide and about six inches deep and into this scatter the manure about four inches deep. On this place your good garden soil, The prices received varied from and mix thoroughly with the and then mix it thoroughly for about birds gained 300 pounds. This was phate at the rate of 500 pounds per acre. If the garden is one which has been well manured for years with the soil to a depth of five or ditions are right.

system of commodity marketing, soil should be kept damp. The seed Seed sown on the first of March standardizing the product by grading box may be set any place in the should develop plants for setting ers, it was possible last year not be singled out and transplanted to pants for setting in June.

THE SMALL-TOWN GOSSIP

Said Mrs. Brown to Mrs. Green; "The Whites have had a spat; He threatened he would slap her face Because she bought a hat; And now, they're not on speaking

What do you think of that?

'Hist, Mrs. Black!" said Mrs. Green, "Didst hear the latest news? The Whites have had an awful row And she was much abused; alsike, peas or beans require a dif- He slapped her face and blacked an
