FOR SALE OR RENT

TO RENT—THREE APARTMENTS, small or large; furnished, partly furnished or unfurnished. All modern conveniences. For particulars apply Middaugh House. 4243

BULL FOR SERVICE Registered Holstein. Terms, \$1.00 to everybody.—William Bogle, Proprietor, half-mile north of Varney, Ont. 3271f

Scratches

A scratch in furniture that goes no deeper than the varnish may be helped by holding a red hot poker an inch above it for the space of about half a minute and rubbing well as soon as it cools with a mixture of alcohol, olive oil and vinegar in equal quantities.

HATCHING AND REARING

The Best Way of Handling the Young Chick.

Great Variation in Mortality—Hopper Mash—Feeding Chicks With Hens—Weight of Chick—Value of Manure—When to Prune.

(Contributed by Ontario Department of Agriculture, Toronto.)

The use of the incubator and brooder has forced the poultry keeper to study the methods of growing chicks. A mother hen and her brood, when allowed to range, can be fed many feeds and the chicks do well simply because the hen and the chicks balance the ration by catching insects and selecting tender green feed, and it may be several other things that we have never observed.

Great Variation in Mortality.

There is a great variation in different broods of chicks reared by the artificial method, and may broods have a high mortality and a very unthrifty appearance. The chicks can be reared easily with reasonable care and attention. The use of a little common sense is essential.

One should remember that, given a brooder, a colony house, and say three hundred baby chicks, it is the duty of the operator to keep the chicks comfortable, and that every need of the body must be taken to those chicks. There is no clucking hen to pick up bits of gravel or to catch insects. The feed must be taken to the chicks.

At present the department of Poultry Husbandry at the O.A.C. is conducting a series of experiments, the object being to find a simple, inexpensive method of growing a normal chicken. It may take years to get the answer, but each season we add a little to our knowledge.

Hopper Mash for Chicks. The mash used at the Poultry Department, O.A.C., in the hoppers, or feed moist, where the chicks are ranging consists of:

- 100 pounds of Corn Meal. 100 pounds of Crushed Oats. 100 pounds of Shorts. 100 pounds of Bran. 47 pounds of the Scrap. 20 pounds of Bone Meal.

The whole grain hopper feed usually consists of fifty per cent. each of wheat and cracked corn. If milk is given to drink, one-half, if not more, of the meat scraps may be taken from the mash.

The pullets stay on range until ready to lay, which period is when they are about six months of age. If they prefer roosting in trees to the house we allow them to do so; in fact we rather prefer that they would roost in trees.

Shade, tender green feed, plenty of clean drink, and enough to eat, are essential.

Feeding Chicks With Hens.

Where chicks are being reared with hens, and have access to tender grass or other green feed, a very good feed is raw or cooked Johnny-cake made with an egg in it. Give milk to drink, and have a quart or so of gravel near the coop to supply grit. Move the coop every few days. When the chicks are a few weeks old gradually change to ordinary feeds.

Raise the chicks on new ground. Keep off the old ground that has had chicks running upon it year after year. Keep the hen free of lice. Dust with sodium fluoride or use a small amount of blue ointment. A piece one-half the size of a kernel of corn, placed on the skin below the vent, will usually kill many of the lice.

Weight of Chicks. One hundred baby chicks when hatched will usually weigh between seven and eight pounds. When the chicks have reached an age of twelve weeks they should weigh between one hundred and seventy-five and two hundred pounds. For sake of comparison we will take a calf at birth with a weight of eighty pounds. Should the calf make the same rate of gain as the chick, it would at twelve weeks of age weigh a ton.

This will help one to understand why broods of chicks vary so much, and will also assist the farmer to appreciate the opportunity at hand to display his skill.—W. R. Graham, O.A. College, Guelph.

When to Prune.

The dormant season is the logical time for pruning, although when the wood is frozen the work may not be very agreeable to the grower. Where young trees or stone fruits are concerned it is probably advisable to delay the pruning until late winter or early spring, but bearing apple trees can be pruned in zero weather without apparent injury. Pruning is the one major orchard operation which can be performed to advantage during the winter months. At that time there are no leaves to interfere with the vision of the pruner, and consequently he is better able to judge which branches should be removed. Furthermore, it is only during the winter that the grower has the time to give to this work.

Value of Manure.

Manure is worth exactly what it will give in net return from the increased crops produced. This amount varies widely depending upon the quality of the soil, the season, and the crop. The value of the manure per ton is increased by uniform spreading, by using a light to medium application of ten to fifteen tons per acre rather than a heavy application, and by applying the manure to oat crops, corn, potatoes, and hay rather than to grain crops. Where bad weeds are not present, unrotted manure will prove more economical than rotted.

Paths and roads about the farmstead not only should be as few as possible but should be kept out of sight so far as feasible.

POTATO INSPECTION AND CERTIFICATION

Arrangements have been made for the continuation of potato inspection and certification during the coming season, and forms of application have already been forwarded to all potato growers whose fields were inspected last year.

These forms are returnable up to July 1, so that there is still ample time for any other growers who may desire to submit their fields for inspection to write for a form and secure any particulars they may desire in respect to the work. Letters (postage free) should be addressed to the Dominion Botanist, Central Experimental Farm, Ottawa, who will see that every attention is paid to requests for forms and additional information. He will arrange for the carrying out of inspections at the appropriate time during the season.

Two field inspections will as usual be made, the first as near as possible to the blossoming period, and the second some three to four weeks later. The standard for the field inspection will be the same as that applied last year, and any fields, as the result of the two inspections, found to measure up to this standard, will be considered eligible for certification, subject to an inspection of the tubers after harvest and the grading out of any which may appear undesirable for seed purposes.

SOME GARDENING

Secretary Wilson, of the U. S. Department of Agriculture, tells of a Philadelphia woman who was planning her garden for the spring.

Her husband came home one day and found her poring over a seed catalogue. She had a long list of seeds on a sheet of paper.

"This is a list, my dear," she said, "I want you to buy for me tomorrow at the seedman's."

Her husband looked at the list. Then he laughed loud and long.

"You want these flowers to bloom this summer, don't you?" said he.

"Yes, of course."

"Well, those you have put down here don't bloom till the second summer."

"Oh, that's all right," the lady said, "I don't care."

"All right. How is it all right?"

"I am making up my list," she explained, "from a last year's catalogue."

NOTES OF FLOWERING PLANTS

Mertensia Virginia

The botanical names of plants are usually more or less of a stumbling block to the amateur gardener. Sometimes it happens, although rarely, that the Latin designation is more attractive than the local name, and as easily remembered. Such is the case with

TENDERS WANTED

Sealed Tenders will be received up to and including May 17, 1924, for cutting both sides of the hill at the Glen, in Glenelg Township to approximately an 8 per cent grade.

Particulars may be obtained from the Engineer, or from the County Road Superintendent, John Johnston, Owen Sound.

Marked cheque for 5 per cent of amount of tender to accompany each bid, cheques to be made payable to the Treasurer of the County of Grey.

The lowest or any tender not necessarily accepted.

R. C. MCKNIGHT, County Engineer, 513 Owen Sound, Ont.

TENDERS WANTED

Sealed Tenders will be received by the undersigned up to and including May 17, 1924, for the construction of the following concrete bridges:

30-foot span, Lot 31, Con. 11, Normanby Township;

25-foot span, Lot 31, Con. 11, Normanby Township;

18-foot span, Lot 313, Con. 11, Normanby Township.

Plans and specifications with the Engineer, or with M. E. Murray, R.R. 1, Newfeldt.

Marked cheque made payable to the Treasurer of the County of Grey for 5 per cent of amount of tender, to accompany each bid.

The lowest or any tender not necessarily accepted.

R. C. MCKNIGHT, County Engineer.

Silver Black Foxes A limited number of shares for sale in Priceville Fox Co., Limited Priceville, Ont. at \$100. Par Value All registered pure bred stock. Low capitalization. All common stock. Absolutely no watered stock. Ten years experience breeding. Stock from P.E.I. Write for further particulars to PRICEVILLE FOX CO., Limited PRICEVILLE, ONT.

the name Mertensia, or Mertensia Virginia, commonly known as Virginia Cowslip, Tree Lungwort, and Blue Bells.

This native of North America, while not showy in the sense that it immediately attracts comment from the casual garden visitor, is a splendid acquisition to the perennial border. The plant, graceful in habit, and with bronzy leaves, bears clusters of blue and purple flowers on stems two feet or so high.

Combined with pink Darwin tulips, with our native trillium, and with the white or pale yellow aquilegia, or columbine, a charming effect is produced in the mixed border in the late spring season. Like the tulip, it disappears from the border in the summer, but plants of later development and spreading tops, such as perennial gypsophila, or statice, will screen the bare spots so that they will not be observed.

This Mertensia should be planted for best results in a deep, very rich but rather light and well drained loam. Left undisturbed it will yield an ever-increasing harvest of pleasure in its flowers and leaves alike.

A SAVING THAT KILLS

The wagon shop, which, once flourished in small towns, has disappeared because those who needed wagons bought them from city firms, who sold an inferior wagon for less money. The purchaser paid out less money, but the manufacturer of wagons drifted away from the small town to the city. The boys who wanted jobs followed, and the same process is going on to-day. We buy in the cities. Perhaps we save a few cents, or very likely we do not; and very often we get an inferior, unsatisfactory article.

We are killing the value of our own property. We are killing every chance our children have of obtaining a position where they would work under healthier conditions and where their money would secure for them some of life's comforts. We are destroying our own market for our own products. We are hastening the depopulation of the rural areas and if we would only be loyal to ourselves and to teach others how much more prosperous and happy everyone would be.

Added to this is also the fact that milliners have had to make tighter bands for the ladies hats and this is attributed also as a cause of baldness. It is also prophesied that the present day bobbed heads would be bald before they reached maturity.

Lydia E. Pinkham's Vegetable Compound is an excellent tonic for the mother at this time. It is prepared from medicinal roots and herbs, and does not contain any harmful drugs. It may be taken in safety by the nursing mother.

BEFORE MY BABY CAME

I Was Greatly Benefited by Taking Lydia E. Pinkham's Vegetable Compound

Sydenham, Ont.—"I took your medicine before my baby was born, and it was a great help to me as I was very poorly until I had started to take it. I just felt as though I was tired out all the time and would have weak, faint spells. My nerves would bother me until I could get little rest, night or day. I was told by a friend to take Lydia E. Pinkham's Vegetable Compound, and I only took a few bottles and it helped me wonderfully. I would recommend it to any woman. I am doing what I can to recommend this good medicine. I will lead that little book you sent me to any one I can help. You can with the greatest of pleasure use my name in regard to the Vegetable Compound if it will help others take it."—Mrs. HARVEY MILLIGAN, Sydenham, Ont.

It is remarkable how many cases have been reported similar to this one. Many women are poorly at such times and get into a weakened, run-down condition, when it is essential to the mother, as well as the child, that her strength be kept up.

Lydia E. Pinkham's Vegetable Compound is an excellent tonic for the mother at this time. It is prepared from medicinal roots and herbs, and does not contain any harmful drugs. It may be taken in safety by the nursing mother.
