GETTING IN FARM ICE

Harvesting This Good Winter Crop in the Best Way

Success Depends on Ten Conditions —Ice-Houses May Be Cheaply Constructed —Harvesting the Crop —Maintenance of Farm Work Horses. (Contributed by Ontario Department of Agriculture, Toronto.)

It is now none too soon to make preparation for the winter harvest of the ice crop. Some may be of the first time planning to harvest some ice this winter, and they will in all probability need to construct some sort of a building or bin in which to store it. Those who have regularly stored ice may have to make some alterations or repairs to the old ice storage. In any case it is a good policy to make the necessary preparations early, and so have everything in readiness when the time comes to cut and store the crop.

Success Depends Upon Ten Conditions

- (1) That the ice be cut from a body of clean water and be free from weeds and sediment. (2) The cakes should be cut regularly, and all of a size. The ice should be at least 12 inches thick. (3) The ice should be stored on a cold, dry day. (4) The cakes should be packed together as closely as possible without any sawdust or other material between them. Any spaces between the cakes may be filled with finely broken ice or snow. (5) Plenty of dry sawdust, at least 12 inches, should be packed between the mass of ice and the walls of the enclosure, and even a greater depth below and above the ice. (6) The top of the ice storage should be provided with good circulation for air in order to prevent accumulation of warm, stagnant air over the ice. This point cannot be emphasized too strongly. (7) The ground below the ice pit should be well drained in order to readily carry off the waste from the ice. (8) The wall around the bottom should be air-tight. (9) The ice should be kept well covered with dry sawdust all summer after each time ice is removed. (10) As far as possible the ice storage should be out of the direct rays of the sun, but yet in a place where there is good circulation of air.

It is possible to secure most of these conditions in a very cheap and simple construction, and therefore the storage of ice need not give one much concern. The better style of ice-house is usually constructed of a wall consisting of one layer of boards on each side of 2 x 4 studs, the space between being left empty.

Ice can be kept successfully in various sorts of storages: A large bin made of single boards nailed on ordinary studding or cedar posts and located inside some other building, as a shed or barn; or outside as a simple lean-to on the shady side of a large building; part of a hay-mow; an old silo; or a more costly and attractive building usually called the ice-house or cold storage building.

Most of the ice stored on farms is used for cooling milk and cream and keeping it sweet for short periods. When both milk and cream are cooled it is necessary to store 1 1/2 tons per cow kept, this amount covering a reasonable waste by leakage in the storages. If a refrigerator is used in the house or adjoining the storage where foods for the table are kept, 2 or 3 tons extra should be stored.

Harvesting the Crop. This crop is not the pleasantest one the farmer has to handle, as it is usually pretty cold and wet work. Lots of good company while working at the job is a great help, and therefore co-operative effort should be carried out in this line of work. The job can be done more efficiently, quickly, more economically and under more pleasant conditions than by the single-handed method. The job is worth while, and, if gone about in a sensible manner, is not too objectionable—certainly not nearly so bad as standing at the tail-end of a threshing machine.

The Department of Physics, O.A.C., Guelph, will gladly supply bulletins and blue-prints describing ice-houses, small cold storages and refrigerators, and describing in detail how the harvesting is done. Write us early.—R. R. Graham, O. A. College, Guelph.

Maintenance of Farm Work Horses. Considerable work was done during the winter of 1923 by the Department of Animal Husbandry, Ontario Agricultural College, to ascertain the cost of maintenance of the farm horses. For heavy horses at teaming work necessary around the farm, such as drawing manure, etc., it cost from 31 1/2 to 36.6 cents per horse per day for feed, stabling and care. The cost of feed was 54 per cent of the total cost of maintenance, and the cost of labor was 22 per cent of the total cost. Horse labor during the winter cost 21.6 cents per hour.

Good For the Soil. Not only does farm manure supply plant food but the vegetable or organic matter it contains also helps to increase the productivity of the soil. As this vegetable matter gradually breaks down, the acid products formed help dissolve and make available to plants some of the otherwise insoluble plant food in the soil. Furthermore, the humus helps retain moisture and improves the soil texture.

Hints for the Household

For November

By BETTY WEBSTER

Readers, Note If you have any questions concerning Recipes, and other Household Hints you would like to ask Betty Webster—address her in care of The Durham Chronicle.

GENERAL HINTS

To Clean a Vase

Dissolve a tablespoon of rock salt in 1/2 cup of vinegar. Put this mixture in vase or glass; shake well for a few minutes. Rinse in clear water.

To Keep Vases Sweet

A sprig of ivy in vases will keep water in vase pure. A lump of sugar put in water with flowers will prevent any disagreeable odor.

Know Your Furnace

Learn to know your furnace. Don't just make a fire and expect your furnace to do the rest. 1. Tend to your furnace regularly. 2. Do not shake too hard or too often. 3. Clean the ash pit daily. 4. Wet ashes before removing from pan. 5. Before shaking a low fire, be sure your fuel has caught. 6. Always poke a hard coal fire from the bottom. 7. Never use any explosives, kerosene, gasoline or turpentine to start a new fire.

COOKING AND BAKING HINTS

Waffles

2 cups of flour (sifted), 4 teaspoons of baking powder, 3/4 teaspoon of salt, 1 1/2 cups of milk, 2 eggs, 1 tablespoon melted butter. Little sugar (1/4 of a cup). Method: Mix dry ingredients—add milk, then yolks of eggs beaten; then melted butter. Mix well. Just before frying, add the whites of eggs beaten stiff. Fry on a hot griddle.

Pancakes

2 cups of flour (sifted), 1 egg, 1/2 teaspoon of salt, 4 teaspoons\* of baking powder, 2 cups of milk, 2 tablespoons of shortening—lard or butter. Method: Mix dry ingredients, add beaten egg, milk and last, the melted shortening. Fry on hot griddle. Pancakes or waffles are good for breakfasts, light suppers and Sunday night tea.

Cranberry, Apple and Quince Conserve

2 cups cranberry pulp,

2 cups apple pulp, 2 cups quince pulp, 3/4 cup of walnut meats, 1 orange (juice and grated rind), 4 cups sugar. Method: Cook altogether until thick.

Patty Cakes

2 eggs, 1 cup light brown sugar, 1/2 cup flour, 1/4 teaspoon baking powder, 1-3 teaspoon salt, 1 cup nut meats. Method: Beat the eggs together. Add sugar. Then, flour in which baking powder has been sifted, also salt; stir all together well. Dredge nut meats and add to cake; bake in small muffin pans. This makes 24 little cakes.

Hint For Frying Eggs To fry eggs so that they look nice is not as hard as it seems. Melt a small amount of fat, less than ordinary, in a frying pan. Pour into edge of pan a small amount of hot water, 1 tablespoon to skillet; break egg into a saucer, slide into pan, cover closely. This is much quicker than poaching, and the good appearance is certain.

BUSINESS AS USUAL

Old Cohen was on his death bed; he was very old, and there was no doubt that every minute he was getting worse; also his sight was failing, so that he could hardly see the outlines of the figures of his family who gathered at the bedside. "Is Rachel here?" he asked.

"Yes, dear I'm here," replied his wife. "Is my son here?" "Yes, father." "Is my daughter here?" "Yes, father?" "Are you all here, everyone of you?" "Yes, father," they replied. "Then who to goodness is looking after the shop?"
