MAN CAN'T ANNIHILATE PESTS; CAN KEEP THEM WITHIN LIMITS

Noted Scientist Says They Breed Faster Than Man Can Cope With Them.—Greatest Destroyers of Insects Are Other Parasites.—Georgia Using Airplanes to "Dust" Arsenate.

Writing in the New York Evening World, John D. Ewen, Washington correspondent, says: "The proper study of mankind is man," wrote the famous English poet, but while Pope was a good versifier, he was not a scientist, since we of this generation are being taught that the proper study of mankind is not man but bugs. If anybody doubts this statement, a few minutes' talk with Dr. L. O. Howard, Chief of the Bureau of Entomology of the Department of Agriculture, will bring enlightenment.

Dr. Howard's name may not mean much to the average citizen, but it carries a lot of weight in the scientific world. A kindly, modest gentleman, a native of New York state, he was graduated from Cornell in the class of 1877, did a year of post-graduate work, and, coming to Washington in 1878, entered the service of the government under Commissioner of Agriculture Le Duc, acting as assistant to Prof. C. W. Riley, and succeeding the latter as Chief of service in 1894. Dr. Howard therefore, has been working pro bono publico from the time of President Hayes up to the present day, almost half a century, and he is the dean of all the scientific men in Uncle Sam's employ. His fame as an expert is international, and the vast amount of good he has accomplished in the unceasing war to abate the evil wrought by insect pests is as well known in Europe as in America.

Dr. Howard is no optimist, no dreamer. When asked if he thought the day would ever come when man would be able to win in the combat with such despicable things as weevils, moths, beetles, grasshoppers and the like, he smilingly replied: "They cannot be annihilated, but by mobilizing all his forces, man can reduce their numbers and hold them down to a minimum of destructive activity. Organized war upon the pests did not really start in the United States before 1878, and then our service embraced only three men, congress having appropriated only \$5,000 for the work. Today we have a staff of 500 and an appropriation of \$2,250,000, but even so there is pressing need of more men and larger funds.

Breed Their Own Destroyers

Curiously enough, too, insects are controlled by nature very much better and more effectively than by man. More of them are destroyed by their parasites and other natural enemies than by human beings. In truth, man has been making things easy for the insects; he has been facilitating the multiplication and spread of his own worst enemies. The increasing spread of injurious insects from country to country can be partially accounted for by the rapidly increasing speed of ocean voyage. Bureau inspectors know how the Japanese beetle and the European corn-borer increase their area of malign operation by the aid of fleets of automobiles traversing improved highways. The Peace Conference at Portsmouth, N. H., ending the Russo-Japanese war, brought many spectators in vehicles from regions infested by the gypsy and brown-tailed moth, and as a consequence, there was a speedy extension of the range of these imported pests. Advancing civilization, therefore, contributes both to the enormous increase of these enemies of man and to their distribution over ever-expanding districts.

Everyone has heard of the greatest of all depredators, the marauder known as the boll weevil, because he attacks and destroys the boll or pod which houses the locks of cotton until they come to maturity and burst out of their home, as chestnuts do out of their burs. The pest originated in Central America, where the cotton trees grow wild, and was unknown in the United States up to a comparatively recent date when by some cruel trick of fate, it got across the Rio Grande River at Brownsville, to find itself in a boll weevil's heaven among the lush cotton fields of the Lone Star State. From Texas it slowly worked its way eastward until it covered the entire cotton belt, and the money loss to the planters for the damage through its ravages for the past twenty years would total hundreds of millions of dollars.

Boll Weevil at Bay

When things looked their worst, the planters were about ready to throw up their hands and admit their impotence before the bug foe. Many of them, believing that the culture of the cotton plant was doomed, turned their attention to raising other crops that the weevil did not devour, and this change to different kinds of production was one of the compensations in the wake of the evil. Now the farmers of Dixie are more hopeful; they have learned how to fight the enemy and limit his ravages. The latest method of prevention, being the sprinkling or dusting of the fields with calcium arsenate by airplanes built for that special work. A new York firm has contracted to "dust" 70,000 acres in Georgia the coming

FOR SALE BY TENDER

Hints for the Household For June By BETTY WEBSTER

Readers, Note: If you have any questions concerning Recipes, and other Household Hints you would like to ask Betty Webster—address her in care of The Durham Chronicle.

HOUSEHOLD HINTS

A Sewing Hint

To avoid puckering sheer material: With some material such as muslin or crepe de chine, it is almost impossible to stitch it without puckering it. This can be avoided by placing a piece of paper under material while stitching and sewing seam. When finished, it is a very simple matter to tear paper away from seam.

Hints For Women While Touring

- 1. Do not worry about your dress. 2. Dress as naturally as you can in order to feel comfortable. 3. A little hat is better than a large one. 4. For hot days—a thin dark dress can be worn anywhere at almost any time and is preferable to the heavy suit, motor coat and veil of the old days.

COOKING HINTS

Don't Forget Watercress Crisp watercress is made so by keeping it in ice water. It is an appetizing garnish for salad, fish or cold meat.

Fancy Luncheon Dish For Summer Luncheon

- Toast. Fried tomato. Sweet breads. Mushroom gravy

Bacon.

Method: Parboil sweet breads. Then broil or fry according to taste. Toast rounds of bread. Fry slices of tomato—red or green. Make a mushroom gravy. Serve on hot platter. Place fried tomato on each round of toast. Place fried sweet bread on top tomato. Pour mushroom gravy over this. Top with crisp bacon and garnish with green.

Asparagus Salad

- 1 large bunch asparagus. 1 tablespoon of gelatin. 2 tablespoons of cold water. 1 cup of hot water (use water asparagus was cooked in). 1 tablespoon of vinegar. Little salt. Mayonnaise dressing.

Method: Boil and drain asparagus. Cut up in 2-inch lengths. Soak gelatin in cold water. Add hot water, vinegar and salt. Arrange tips in circle around mold. Fill centre with plain pieces. Pour over gelatin mixture and chill. Serve with mayonnaise dressing. Peas are a nice addition. Parsley and radish roses also make a pretty trim.

BAKING HINTS

Strawberry Shortcake

The most tempting dessert for this time of year. Individual drop strawberry short cakes are delicious and no trouble to make. Recipe for 4 individual short

cakes:

- 1 cup of sifted flour. 1 tablespoon of butter. 2 teaspoons of baking powder. 1 scant tablespoon of sugar. Little salt. Milk enough to make drop batter. Method: Put together flour, butter, baking powder, sugar and salt. This can be done any time ahead in morning or afternoon. Also pan floured. Then just before ready to bake, have oven hot. Add milk enough so that batter may be dropped from spoon on to floured pan and not be running. Bake in a hot oven. Split cakes—put butter between and crushed and sweetened berries between and on top. Serve with either plain or whipped cream.

Prune Charlotte Russe

This is delicious for any meal. The recipe: Sponge cake. Simple icing. 2 cups of prune pulp (cooked). 1/2 cup of chopped nuts. 1 teaspoon of vanilla. 1 bottle of whipping cream. Sugar.

Method: Hollow out centre of cake. Mix prune pulp, sugar, whipped cream, nuts and flavoring. Pile lightly in centre of cake. Decorate with prunes and cream. If cake is large, this will serve ten to twelve people. Use smaller cake and half recipe for fewer people.

season, and where the arsenate is used, the bug is effectively done for, so it is quite possible that the flying machine can be cleverly put to another important use.

Take the case of apples, king of all fruits, the monetary value of which in this country for the five-year period immediately after the World War was \$185,000,000, or almost half the value of the potato crop, and there is an annual loss of not less than 10 per cent from the same source. Some authorities figure the damage wrought by the codling moth or apple worm at 20 per cent, and this does not include the killing of trees by the insects, nor the cost of spraying the orchards, plus the labor and expense of insecticides.

It would take an entire edition of this newspaper to relate in detail the disheartening story of scores of other pestiferous enemies of man; of the European corn-borer that eats into the ears and stalks of this splendid food plant and that has brought dismay to farmers of New York, Pennsylvania, Ohio, Michigan and all New England; of the alfalfa weevil that spells ruin in Idaho and Utah; and of the Japanese beetle, now an accursed thing in New Jersey and Pennsylvania; of the gypsy moth that has caused thousands of trees to die in New England centres of infestation and of the equally odious brown-tailed moth. Many of these nuisances have done hurt to agriculture since man first planted anything in Mother Earth. Ancient records of the Egyptians and Greeks contain references to grasshoppers or locusts, and the prehistoric Aztecs and Indians portrayed them in picture writing.

NEWS OF NEARBY TOWNS

(Continued from page 7)

head and body went through the glass, but Mr. Scott remained on the ladder. The injuries necessitated the attention of the doctor who sewed up the worst gashes.

The Mount Forest Tennis Club has a membership of about 40 this year and has recruited a number of young players.

On June 6, the Conn Telephone Company presented a purse to Mrs. McPherson of Conn who for many years has been the capable operator at that point.

Markdale

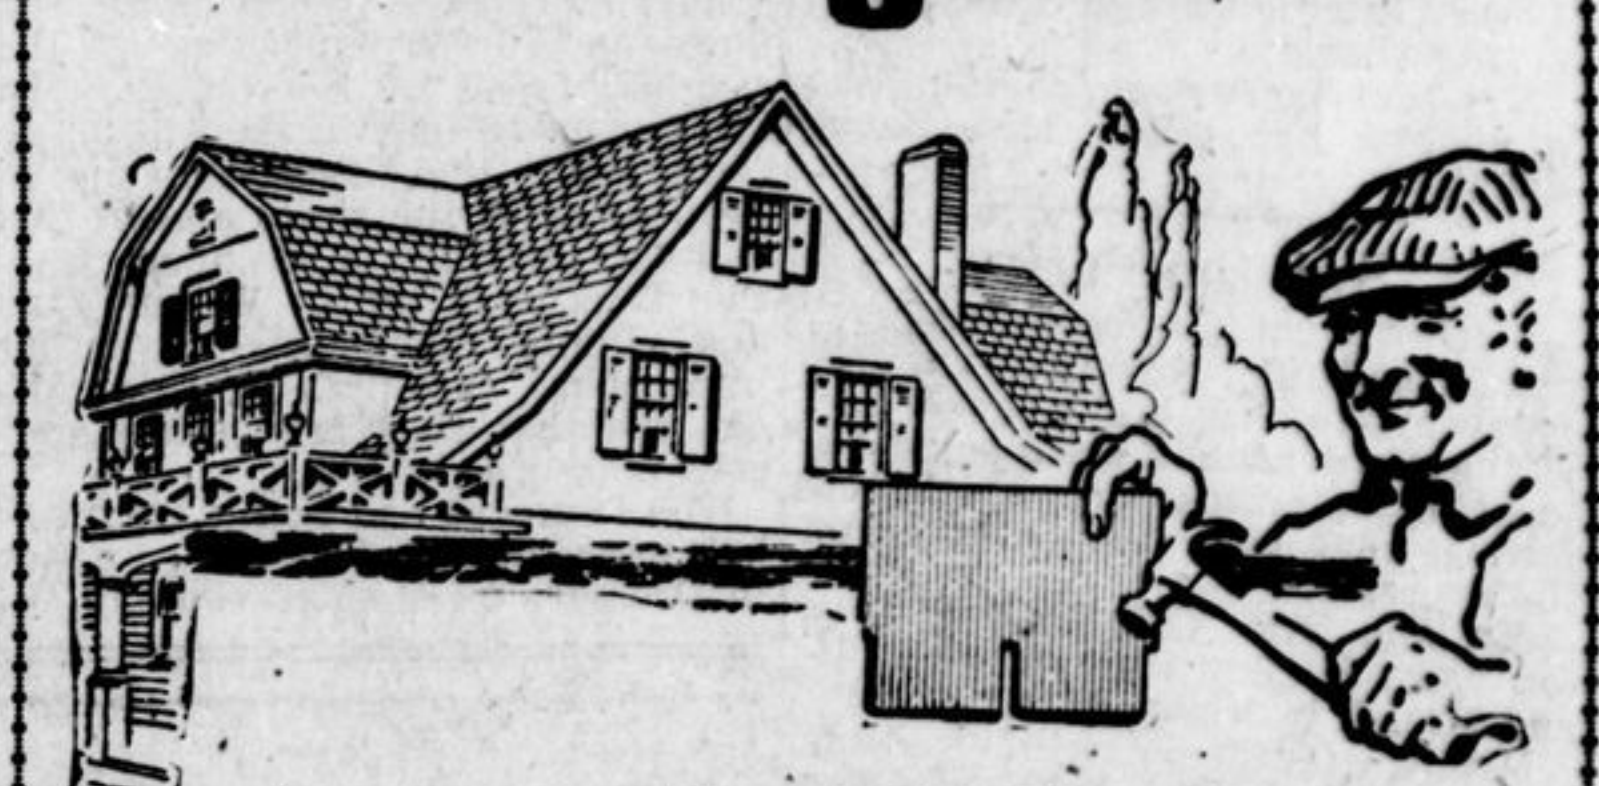

Mr. and Mrs. John H. Gibson of this place were bereft of their four-month-old son, William John Nowell, on Sunday morning of last week. The funeral took place the following Monday to Flesherton cemetery.

A meeting of the Markdale Cemetery Board was held at the home of Mr. C. W. Rutledge on Monday evening of last week. General business was transacted, and officers were
