The Public's Chief Concern

IN the matter of telephone service we believe the public's chief concern is in two points:-

- [1] People want to know that they can count upon getting a complete telephone service of high quality, day and night, now and in the future.
- [2] People want such service at a price that is as low as sound business practice permits, and less than the value of the service received.

These points are the essence of true public service, and this company is just as deeply concerned in them as is the public.

At the present time, as we have explained, an increase in rates is needed to assure the continuance of the kind of service our subscribers require.

The reasons are:-

- [1] Our earnings per telephone have declined, due to the great development of lower rate service, such as twoparty line.
- [2] Large additions to plant at presentday prices, as compared with the low price levels of a few years ago, have increased the fixed charges to be provided from our earnings.
- [3] The low rate of depreciation suggested by the Board of Railway Commissioners, as a temporary measure, is now known to be inadequate to protect the investment.

A reasonable adjustment of the wide difference between present telephone rates and the cost of doing business is an obvious necessity. Such technical subjects as property valuation, rate of return, and depreciation expense have an important part in determining telephone rates. Casual discussion of such subjects is often misleading for it can deal only briefly with matters that must be gone into in great

detail to be clearly understood. These and all other factors will be presented in detail to be fully considered by the proper public authority, the Board of Railway Commissioners for Canada.

The booklet "Telephone Service and Rates" states the facts of our position. A copy has been mailed to all our subscribers. If your copy has not reached you, we shall be glad to send you one.
