Fire Brigade Is Being Reorganized

Resignation of Chief Whitmore Was Accepted by Council Monday Night and Arthur McDonald Received Appointment.—Business of Session Was Varied.

The sitting of the Town Council last Monday night was a lengthy one and, oratorically, the most voluminous for a good many months. The famous dog bylaw caused a lot of discussion, some of the speakers expressing themselves as being in favor of a modified bylaw that would prohibit the canines running at large during the winter months. It was brought to the attention of the Council that some of the neighboring farmers were afraid to bring their dogs into town with cattle, but this was made plain by the Council as a false alarm. Contrary to the opinions of some it is not contrary to the bylaw for a dog to accompany his master or mistress unleashed and Reeve Bell stated that did he own a dog and were fined for allowing the animal to accompany him on the street he would appeal the case, and win it too. There was nothing in the bylaw that would make it a misdemeanor to take Fido or Fidette out for an airing at any time. The Council did not deal further with the bylaw, and we suppose it stands "as

Heard Petition Re Egg Grading The Council was addressed at some length by Mr. J. S. Westmoreland of Guelph, a representative of the Dominion Department of Agriculture, regarding the establishment of an egg in the local Roman Catholic pastorgrading station here, and as a report ates. Plans and Objects of

S. Westmoreland of Dominion Department of Agriculture Gave The Chronicle Valuable Information Which We Pass on to Our Readers.

"It is common knowledge that in the past many dozens of eggs have reached the consumer in such a condition as to be absolutely unfit for human food and the chief object of an egg-grading station is to put an end to this waste of good food."

With a view to finding out just how an egg-grading station operates how it is established, we arranged an interview with Mr. J. S. Westmoreland, of the Dominion Department of Agriculture, and this is what he told us.

"With very few exceptions the properly fed hen, when she lays an egg delivers a perfect food product hygienically sealed and wrapped in its shell. If it does not reach the consumer in the same condition it is not the fault of the hen-it is the fault of some meantime.

"Hitherto it has been difficult if not impossible to discover who was to blame and therefore the first step was to 'grade' all eggs as they come from the producer. This in brief is the work of the egg-grading station. However, it does not end there. If a producer brings low quality or stale eggs to an egg-grading station, they are not merely told that their eggs poor in quality, but they are told how to manage their flocks and how to handle their eggs so as to get the best possible quality eggs."

"Do you mean to say that an egg grading station is a sort of school or an educational institution?" we quer-

"Precisely," replied Mr. Westmoreland, "it is to a very large extent, if not entirely, an educational institu-

"If it is so don't they know that without being told?" we asked quite

"No," said Mr. Westmoreland. "In the past they have marketed their eggs with local storekeepers and while the local storekeeper might know that a certain lot of eggs was of poor quality he was not in a position to say so egg grading station at Durham. without losing business-and he could not afford to lose business, so he said nothing and stood the loss."

"Would that state of affairs apply to most of the farmers?" "Not by any means. Most farmers produce and market a very good class family, for a few days. of eggs, but even a small percentage of bad eggs will affect the market very from Oshawa visiting his parents, he left this vicinity with great region adversely and it only takes one bad Since coming to this parish Father adversely and it only takes one bad Mr. and Mrs. A. McDonald, over the justice at which national differences played between Listowel and Durham a very delicate food product and it takes very careful handling if its good qualities are to be preserved until it reaches the ultimate consumer. This careful handling is impossible to local storekeeper who invariably has to receive most eggs on the day he is busiest in his store selling goods and who has no facilities for candling, grading and repacking eggs as they come into his store."

How a Station is Established "And how," we asked Mr. Westmoreland, "do you go about establishing an

"Well," was the reply, "Personally, cannot take the credit for doing very much. As a matter of fact a group of your more progressive farmers have been talking about the matter for a long time and have at last come to the conclusion that something should

benefit of the whole community and it for many years to come. will be operated as economically as is consistent with efficiency. The stastill open and after a lot more discussion the Council felt that there was

"Well the poor management-poor

systems of feeding and housing henssystems of feeding and housing hens—which produces poor quality eggs also Heard Good Address makes the hen lay fewer eggs in a Egg-Grading Station year and it costs practically the same to keep a hen a year if she lays only two dozen eggs as it does if she lays twelve dozen eggs in the year. Many hens lay twenty dozen eggs in a year and those are the hens which lay the best table eggs. So you see poor quality eggs mean a loss to both producer, merchant and consumer. That is why an egg-grading station must be educational in its work if it is to

"Who will get the profit if a profit is made by the egg-grading station?" "By that I take it you mean, who will get the operating profits? Well, I don't think there will be any operating profits. If there were the charged for grading eggs would reduced. The real profits made by an egg-grading station are not operating profits any more than the real advantages of a medical clinic or a technical school are operating profits. You get the profit in the increased returns to every farmer and every citizen in the community. Every person in the community benefits by the work of person who has handled the egg in the egg-grading station whether they are a public utility."
