Automatic Incubators and Brooders

Insure Bigger Hatches, Better Chicks and Larger Profits.

The Automatic incubator has exclusive patented features that cannot be obtained in any other machine and that positively insure bigger hatches, better chicks and larger profits.

The AUTOMATIC REVOLVING CHUTE construction prevents overheating and underheating and produces largest possible hatches with labor, risk and cost reduced to a minimum.

The Automatic Coal Burning Brooder is self regulating. A uniform temperature is maintained under the hover regardless of weather conditions. Fire is retained in the stove, and will not go out as long as there is any coal to burn. This prevents the brooder house from chilling and keeps the room warm for many feet outside the hover.

No Beginner Pupils After Easter Holiday

Public School Board Makes Request Regarding the Starting of Pupils.—Has Proved Advantageous.

The Public School Board requested The Chronicle to make plain that parents refrain from enrolling their children in the Public School following the Easter holidays, made in the form of a request, understand that the Board is well rights in refusing to admit such if they see fit.

The request is a perfectly legitimate one, this practice having been out in the local school during three or four years. When first the Board was not sure result, but the experience has proven to Board and teachers, requirement is not only in the interest of the pupils but the staff's time. The smaller the school the more the staff's time is wasted. Pupils attending school for time and making their debut at Easter holidays simply cannot give the proper attention as a result are no further ahead educationally than if they had been home until the end of the vacation. At Easter time the school enters its last lap for entrance results and the naturally engage the major part of the staff's time. The smaller the school the more the staff's time is wasted.
