Come in & Chat Awhile

-Ruth Raeburn.

Ruth Axtell Chalmers in the "Modern one muffin recipe.

With a recipe for plain muffins fixed firmly in mind it is an easy matter to make many kinds of hot breads without turing to a cook book. She does not dwell in marble halls, Muffins of all sorts, corn bread, coffee Nor use her leisure paying calls; cakes, fruit and nut loaves can all be Fifty per cent of her life is spent produced by varying slightly a simple In a tiny kitchen with smoke-stained foundation. The following recipe is a very satisfying one from which to

Plain Muffins

1 egg, 1 cup milk, 2 cups flour, 4 She slaves and toils and roasts teaspoons baking powder, ½ teaspoon salt, 2 to 4 tablespoons sugar, 2 to 4 From early morn till twilight grey. tablespoons shortening.

Method I

Beat egg, add milk, then the dry inand melted shortening. Beat just Things she can bake may help to make and melted shortening. Beat just Saints and sages and statesmen, too. enough to mix thoroughly.

Method II

Cream shortening and add sugar add beaten egg, milk and flour, baking powder and salt sifted together. Beat just enough to mix thoroughly. Pour the batter into greased muffin pans and bake in a hot oven. Time in bak-

ber of variations from this foundation dumb. recipe, pans of different designs are needed. In addition to the deep, round muffin pans that form a part of every housekeeper's equipment, vasion of the studio by the talkies will when a talking picture is being made. you will probably want gem pans, ob- be to eliminate the Hollywood peril. EXPERIMENTAL FARM NOTES AND BULLETINS

MAKING SILAGE FROM LEGUMES

Sweet clover, red clover and a mix-For the past five years extensive ex- Flour. Listen in every Monday, Wedperiments have been conducted at the nesday and Friday mornings between Central Experimental Farm at Ottawa 9 & 10 o'clock (daylight saving time.) to determine the best methods of making silage from the legume crops mentioned above, and considerable information is now available on this

It has been found that sweet clover makes the best quality of silage if the crop is cut when the plants are showing their first blossoms. While some little difficulty has been experienced in harvesting green sweet clover with the binder, the ease with which the bound sheaves are handled to the silo has more than offset the difficulties met in harvesting the crop in this manner. Two or three hours of wilting in the field after cutting did not injure the sweet clover for silage but longer periods should be avoided especially i

the weather is dry and hot. In regions where red clover grows with success, it is usually made into hay but the experiments conducted at the Experimental Farm indicate that this crop will also produce good silage. Red clover cut when in full bloom and ensiled within two or three hours produced silage which always came out of the sile in perfect condition.

Mixtures of oats and peas, and oats, peas and vetches which were cut when the oats were in the early dough stage yielded silage showing faint evidence of beginning to change from a green to a ripe color. A few hours of wilting in the field did not affect the quality of the silage secured from these mixtures. When the crop was wilted for more than three or four hours in the hot sun there was a tendency for pockets of mold to be formed in the silo when this over-wilted material was ensiled.

No commonly grown hay crop exceeds alfalfa in value and this crop should be made into hay rather than
