

CHURCHES

YOUNG PEOPLE'S GET-TOGETHER

The B. Y. P. U. of the Durham Baptist church entertained the young people's society of the Presbyterian church on Monday last. The visiting society gave a very interesting devotional programme consisting of a reading by Miss Mable Sharp, a vocal solo by Elizabeth Harding and an address on "Reminiscences of Missionary Days in China" by Rev. B. D. Armstrong. Miss Firth was the leader of the meeting. Contests and refreshments ended a pleasant evening.

KNOX Y. W. A.

Knox Young Women's Auxiliary was entertained at the home of Miss Margaret McGirr for their Annual Easter Thankoffering on Monday evening, April 28th. The President, Miss Margaret Lennox was in the chair. The meeting opened by singing hymn 192, "When I Survey the Wondrous Cross".

Several items of business were discussed. It was decided to hold the quilting on Tuesday afternoon, May 6th. Miss Winnie Blyth and Miss Myrtle Koch were appointed delegates along with the President to attend Presbyterian in Hanover, and it is hoped that as many as possible will attend from the Auxiliary.

The regular Easter Service as outlined in the leaflet was followed. A detailed report of the meeting of the Conference Branch was given by Mrs. Smith which was very interesting and instructive. The meeting closed by repeating the Lord's prayer in unison.

A social hour followed with a number of interesting contests after which lunch was served. Over \$22.00 was realized.

Ain't It The Truth?

"You are charged," said the judge, "with beating up this government inspector. What have you to say?" "Nothing," replied the grocer, "I am guilty. I lost my head. All morning I held my temper while government agents inspected my scales, tasted my butter, smelled my meat, graded my kerosene. In addition, your honor, I had just answered three federal questionnaires. Then this bird came along and wanted to take moving pictures of my cheese and I pasted him in the eye."

Smile Awhile

THE surest foundation for smiles and happiness are good health and abounding vigor. You'll find both in GOOD BREAD. Eat it at meals and in between meals—whenever you're hungry; for this loaf of purest quality ingredients fills every food need for strength and nourishment.

Henderson's Bakery

SOCIAL AND PERSONAL

Mr. Edward Clark underwent a critical operation at the Memorial Hospital on Friday last and his many friends will be glad to know that he is doing as well as can be expected. He was able to return home on Tuesday. Misses Norah and Jeanne Dunn of Arthur spent the week-end with their grandmother, Mrs. Thos. Kennedy. Miss Mary McKechnie is visiting in Detroit with Mrs. L. B. Mollison while Mr. Mollison is in Texas where he will spend a short time.

Mr. and Mrs. H. Pryor and children of Chesley were guests of Mr. and Mrs. M. H. Bailey on Sunday.

Mr. Harry Kress of Toronto visited with his father, Mr. George Kress, and sister, Miss Eleanor Kress, the first of the week.

Miss R. Gillespie, R.N., who recently completed her training in Durham Hospital, spent a couple of days this week with friends in town.

Mr. and Mrs. D. Adlam and son Clarence, accompanied by Mrs. G. P. Campbell, spent from Friday to Monday with friends and relatives in Toronto. While there they also visited with Dr. Gun and Dr. Edward Lauder, both of whom they report as in good health and doing well.

Rev. Thomas H. Farr, who underwent a serious operation in a London hospital a few days ago, is reported as doing as well as could be expected. His friends here are pleased to learn of his improved condition, which was regarded as most serious for some time past.

Miss Myrtle Dean returned recently from New York city after completing her six months' course as an affilia from Bruce County Hospital, Walkerton, Ont.

Mr. and Mrs. Fred Giles received an invitation to attend the graduating exercises of Miss Vera MacIntyre, of the Kitchener-Waterloo hospital, which is to take place at the Collegiate Institute, King Street Kitchener, on Friday evening, May 16. Miss MacIntyre is a former Durham girl, a daughter of Mr. and Mrs. H. D. McIntyre.

Mrs. C. D. Kent and family have returned to town from Chatham, where they spent the past two or three weeks with relatives.

Mr. G. C. Webster of Teeswater arrived in town Monday and has already taken over the management of the Canadian Bank of Commerce. Mr. C. L. Laing, who has been in charge since the illness and death of the late C. D. Kent, leaves today for his home at Brantford.

Mrs. James Hepburn and Mrs. J. F. Grant attended the Presbyterian W. M. S. convention in Toronto this week.

Mrs. W. Benson and son Cameron have returned to Niagara Falls after visiting her father, Mr. John Vollett.

Mrs. D. MacArthur is visiting her daughter, Mrs. Gordon Coutts, at Conn. Messrs. Harry Tinianov and friend, Mr. Mack Lawrence, visited at the former's here over last week-end.

Mrs. George Stewart of Glenelg is a patient in the hospital here.

HYMENAL

PEDEN—MacNAB

Very quietly on Saturday, April 26, 1930, at two o'clock p.m. in the Congregational Church, Port Huron, the marriage was solemnized of Mary Islay, only child of the late Captain Alexander MacNab and the late Mrs. MacNab of Owen Sound, and Mr. Robert William Peden of Port Huron, Mich., son of the late Mr. and Mrs. William Peden of Toronto. Rev. Johnathan Turner officiated.

The bride looked lovely in a picturesque costume of coral shade crepe and lace, made on long princess lines, with which she wore a mohair hat, trimmed with matching velvet, coral shade shoes and a black velvet wrap with white fox collar. The bride and groom were unattended and the only guests at the ceremony were Miss Eva Peden of Toronto, sister of the groom, Mrs. John MacNab of Sarnia, and Miss Jessie MacNab of Owen Sound, aunts of the bride. The groom's gift to the bride was a silver fox fur. Mr. and Mrs. Peden left immediately after the ceremony.

DID CANADIAN ASTRONOMERS DISCOVER PLANET "X" YEARS AGO? When a prominent astronomer in the United States disclosed to the world that he had photographed the mysterious planet called "X", officials at the Dominion Observatory, Ottawa, investigated the matter and after a close search found the object on two photographic plates taken in 1924. Top, left, is a print from one of the plates showing the supposed Planet "X" (see arrow) while below is a picture of the Dominion Observatory, Ottawa. Dr. Meldrum Stewart, Director of the Observatory is shown on the right.

CIGARETTE MACHINE MAKES UNENDING STREAM

I suppose every cigarette-smoker has at one time or other been humiliated, and by somewhat similar means. In the goodness of his heart he has offered a cigarette to the superior person who smokes a pipe and the superior person has said: "No thanks, I only smoke tobacco."

The worst of it was there seemed no answer to the superior person. You could not prove that your cigarettes were "all tobacco."

But there is an answer, and I found it by going over a factory at Nottingham, England, where cigarette-making recently celebrated its hundredth birthday, writes a Tit-Bits man.

I saw the tobacco enter the factory in its raw leaf state, and I watched its every process until it was ready to come out again as a cigarette with the familiar label on the outside of the box and the familiar cigarette card inside.

And the answer to the superior person is: How, with 5,000 workmen to see all that takes place would any reputable firm dare to mix anything with the pure tobacco?

In the factory, the first things to be seen are the brown bales of leaf tobacco and after that the one great impression is of the vast quantity of intricate and delicate machinery.

The first process is the moistening of the leaf by machinery to make it pliable and workable. The moistened leaves are passed on to benches where groups of girls grab them and give one savage tear. This grabbing and tearing process is done by hand, and is done for the purpose of removing the hard stalk in the centre of the leaf.

The next stage is the blending. The blenders' job is a highly-specialized one; they must have a keen eyesight and a keen sense of smell, and above all, they must be good, sound judges of what constitutes a good tobacco for either pipe or cigarette. Where a mixture is being made, the light and dark tobaccos are mixed in a machine which ensures exact proportion.

After this it passes to a conditioning room where it is brought to maturity. Previous to reaching the factory it has lain for from three to five years maturing in bonded stores, either at Liverpool, Manchester, or London, but it receives its final touch in the conditioning rooms of the factory.

All of it has now been blended and graded, and to that portion which is to be sold to the pipe-smoker goes to its own room, where it is packed and labelled by machinery and finished for sale. The tobacco for cigarettes goes to another machine, where it is rolled and wrapped in paper by machinery.

I watched the paper fed to the machine, saw the tobacco being put on to a miniature conveyer, and then, at the other end, saw what seemed like a little jet belching forth one continuous cigarette. This jet never stopped, and it was all done so quickly that you could not see the little knife come down through the continuous roll when a cigarette length had emerged from the mouth of the jet.

There was a new device which weighs the tobacco in each cigarette and records to the hundredth part of an ounce any variation in the weight of tobacco.

Outside the factory it was good to find that the firm has adopted modern welfare methods. The firm has provided twenty acres of sports grounds, where football, hockey, cricket, tennis and bowls are played.

SELECT DISEASE-FREE POTATOES FOR PLANTING

(Experimental Farms Note.) Good seed is the first requirement for a satisfactory crop, and seed is not good unless it is disease-free.

It is extremely difficult to grow and store potatoes in such a manner that they are entirely free from diseases and mechanical injuries when removed from storage in the spring; but, by careful grading the majority of these undesirable tubers can be discarded before planting.

If, however, Dominion Government Certified Seed is used, the best possible results will be obtained because in order to pass the rigid inspection for this grade the seed must be true to type, free from cuts and bruises and contain a minimum of serious diseases.

When selecting your seed potatoes for planting, discard all undersized tubers, they are apt to be the progeny of either mosaic or leafroll plants which always produce small unmarketable potatoes. Avoid the use of excessively elongated or pointed tubers, because this type is characteristic of a disease called spindle tuber, which is transmissible through the seed, and greatly reduces the yield of the crop.

Remove all tubers that show any signs of rot, either wet or dry, because a number of organisms which exist in rotted potatoes, when placed in the soil give rise to such destructive diseases as late blight, black leg, rhizoctonia and scab.

When cutting seed before planting never use tubers showing internal brown netting or discolored areas, because these sets may produce diseased plants in the field.

If the best results are desired from the succeeding crop, plant only potatoes that are smooth, good type, uniform in size and free from bruises, rot or disease symptoms of any kind. If procurable always use Dominion Government Certified Seed.

EATING TO LIVE

Methuselah ate what he found on his plate. And never, as people do now, Did he note the amount of the calories count— He ate because it was chow. He wasn't disturbed as at dinner he sat. Destroying a roast or a pie, To think it was lacking in granular fat Or a couple of vitamins shy. He cheerfully chewed every species of food. Untroubled by worries or fears, Least his health might be hurt by a fancy dessert. And he lived over nine hundred years.

AGRICULTURE NEEDS INVENTORS

There is a real opportunity awaiting some enterprising genius who will evolve a machine which will effectively and economically dust wheat plants to prevent stem rust. The experts of the Dominion Department of Agriculture find that the only effective method of controlling this parasitic organism, which spreads with amazing rapidity, is to apply finely powdered sulphur to the stem of the growing plant as a toxic agent. A considerable fortune awaits some lucky person who has "dust on the brain" well enough to design a new form of machine for this purpose.
