TIED LACROSSE GAME

team to town on Thursday evening pensive ingredient of the ration, allast and held the Flesherton septette though fed only in small amounts, Mr. and Mrs. George McMeekin and the better of the play the first three family of Durham were guests of Mr. periods, but in the fourth Durham Miss L. Trafford, Durham, spent the best senior players, F. Murdock and allowed Durham to tie the score after

> Flesherton started the scoring near the end of the first period when Best received a pass and on a nice play fooled the net-minder. Durham evened the score two minutes afterwards when Lawrence took a pass from Lauder.

score and left the score 3 to 2 when ers were victorious by a 19-10 score. the period ended. Les. Ferris grabbed the ball from a face-off near the Durham goal and slipped one in, ending the scoring for Flesherton. Durham came back strong, rushed the Flesherton goal and aded two more with F. Murdock being the spark plug of their attack and the game ended four all. It was a real game and a credit to the ability of the locals, only one player having experience in lacrosse. There are three players on the team not eligible for junior company. I is expected that a team from Orangeville will be the next opponents that Flesherton players will meet at the local arena.

FACTS ABOUT TOBACCO

Here are some interesting facts about tobacco growing in Canada supplied by the Department of Agriculture at Ottawa:

French settlers in the early colonial Ottawa.

Government assistance was first given in 1735

In 1871, the year of the first decimal census, production was estimated at 399,870 pounds for Ontario and 1,-

195,345 pounds for Quebec. In 1931 there were some 7,200 farms producing tobacco in Ontario and Quebec, and approximately 70,000 persons were in engaged in the production or manufacture of tobacco and its prod-

province in the Dominion; Canada's production of commercial tobaco for 1931 was estimated at

51,000,000 pounds.

Wife-"Oh, I'm so sleepy. Is everything shut up for the night, dear?" Husband-"That depends on you. Everything else is."

BIOLOGICALLY TESTED FISH OILS IN POULTRY FEEDING

Fish liver and body oils are the most to keeping immature and inferior sows A and D which are essential to growth and normal bone formation respectively for poultry. In addition the complete absence or serious depletion of the former from the ration of growing or mature birds brings about a condition known as avitaminosis which have serious results and will cause loss of health and production and finally death. Similarly, avitaminosis D causes rickets in young chicks with consequent cessation of development and death and in mature fowl less often a ricketic condition, cessation of production and depletion of the skeletonal structure. The importance of these vitamns to normal well being and productivity of poultry will be readily appreciated, particularly in view of the demands made upon utility poultry today. It is essential therefore that an adequate source of these vitamins be supplied. The vitamin A and D content of fish oils varies greatly according to the season of the year, the type of food available to the fish from which the oil comes and the care given to the oil in handling and refining The only accurate method of determining the vitamin content of these oils at the present time through the biological test which consists in determining the ability of representative sample of any oil to support normal growth and bone development at certain levels of feeding to young rats or preferably to chicks. Durham brought a box lacrosse Since these oils represent the most exto a four all tie. It was a real good may be poor economy to buy oil of game and both teams entered into the uncertain vitamin content if biologifray in a strenuous manner with cally tested poultry oils are available. hard checking, although only three If biologically tested oils are not used Mr. Howard Reay is spending a few penalties were handed out by referee it is recommended that oil be obtaking two of them. The locals had putable manufacturers of poultry oils who produce a consistently high

PLENTY OF SOFTBALL

Softball fans and players had almost more than a sufficiency of their favorite sport during the past week, there being five games, all but one of which were played in town. Thursday night Stan Pust's Black Cats and Bob Saunder's Skylarks tangled with disastrous results to the former. Friday night the local girls played the Dundalk ladies, the visitors winning by 19-6. The second period had only five | Saturday evening the Manjuris team, seconds to go when Phillips put Flesh- city league champions of Owen Sound erton one up and in the third period lost to a Durham nine 12-5, and the Ed. HAD ITS FACE LIFTED

Very few people know the interesting history behind the development of the popular and ubiquitous tomato, which has not always been the luscious appetizing, bulging, smooth, rounded, ripe red fruit we know today. There was a time, and not so many years ago at that, when the tomato was a wrinkled, wizened up, unattractive, skimpy fruit, which had very little "eye appeal." It has only been of very recent years, as a result of the work of Burbank and specialists in plant breeding, that the tomato's little wizened-up old face has been lifted to the sunny, smiling, attractive countenance which makes it so popular today.-Dominion Fruit Branch.

PREFER SIX-QUART BASKET

For the marketing of apples, peaches and similar small fruits two types of container appear to be growing in popular favour. For use in the retail store where fruit is sold out in small lots the bushel hamper provides an ideal package, while the housewife who carries her supplies home finds the sixquart very convenient. There is probably more opportunity for development in conection with containers of suitable type than in any other phase o Tobacco growing was introduced by fruit marketing.—Dept. of Agriculture,

BREAD AND BUTTER NOTES

Exports of Canadian butter for the twelve months ended May last were eight times the volume of the exports during the previous twelve months. Totalling 107,904 cwt. it has been calculated that this amount was sufficient to butter 2,762,372,396 slices of bread from 197,312,314 loaves. The figures were based on the average bread and butter consumption of dining car service of the Canadian National Rail-Tohacco is grown in nearly every ways for one year of operation.—Department of Agriculture, Ottawa.

Old Lady-"Yes."

Boy-"Well, does your husband know that you speak to strange men?"

MATING THE BREEDING SOW HOME-CANNED TOMATO

Too many farmers are accustomed farrowing time, thousands of farmers see their possible profits vanish when their sows produce uneven litters, frequently few in number and lacking strength and vigor.

Only sows that are typical of the breed and type to which they belong, which produce good strong litters, and which are good milkers, and good mothers should be retained in the herd. Replenish the herd with offspring from such proven mothers by selecting the gilts that are developed and which have fair depth and plenty of constitution, combined with smoothness, and reasonable length. Then in choosing the boar to mate with the sows he should not only be well bred and of the bacon type, but should be a masculine, active individual of good quality, with strong constitution, and as much length and depth of side as possible.

The gilts selected for breeding purposes should not be bred too young because the young sow will not usually have sufficient strength and vitality to withstand the heavy drain on her system resulting from her own growth and the production of a strong, healthy litter. Experience at the Dominion Experimental Station, Lacombe Alberta, indicates that gilts should not be bred until they are at least 8 months old and well developed for their age. The very young sow is seldom able to raise a fair-sized litter of pigs and if she raises only a few pigs in her first litter ner mammary glands do not develop properly and, in consequence, subsequent litters will suffer, all of which tends to deplete her future usefulness.

Though the sow need not be fat she should be full of vitality and thriving at the time she is bred. In many cases litters are small and weak, simply due to breeding the sow too soon after weaning a large litter, or when in too thin condition.

It will pay you to advertise in The Chronicle.

The homemaker who cans good red tomato juice when the tomatoes are efficient practical sources of vitamins for breeding purposes. Others do not in season is canning for her family give the care and management which the materials of which good teeth, is required to supply the needs of the clear complexions, good appetite and pregnant sow. The result is that at general body vigor are made. Homecanned tomato juice may well take the place of oranges as a breakfast cocktail.

The easiest way to prepare tomatoes is to cut them up and cook them in their skins, and then put them through a wire sieve. The pulp is then boiled rapidly for five minutes, one teaspoon each of sugar and salt is added for each pint and then the mixture is poured into clean hot jars and sealed.

Another method is to wash the tomatoes, remove all imperfect spots and press them through a sieve before cooking. Pour the pulp into clean jars and add a teaspoon each of salt and sugar to each jar. Partially seal them and cook in hot water bath for sixteen minutes after water begins to
