PASTOR AND PEOPLE PRAISE PSYCHINE (PRONOUNCED SI-KEEN)

A Marvellous and Triumphant Record of Victory Over Disease.

No medicine has ever effected as large a number of wonderful and almost marvellous cures as Psychine. It has had one continuous record of victories over diseases of the throat, chest, lungs and stomach. Where doctors have pronounced cases incurable from consumption and other wasting diseases Psychine steps in and rescues numberless people even from the very verge of the grave. Coughs, Colds, Catarrh, Bronchitis, Chills, Night Sweats, La Grippe, Pneumonia, and other like troubles, all of which are forerunners of Consumption, yield quickly to the curative powers of Psychine.

Mrs. Campbell, one of the many cured, makes the following statement: I cannot refrain from telling all who suffer of my remarkable recovery with Psychine. In April, 1902, I caught a heavy cold which settled on my lungs and gradually led to consumption. I could not sleep, was subject to night sweats, my lungs were so diseased, my doctor considered me incurable. Rev. Mr. Mahaffy, Port Elgin Presbyterian Church, recommended Dr. Blochin's Psychine to me, when I was living in Ontario. After using Psychine for a short time I ate and slept well, the night sweats and cough ceased. Months ago I stopped taking Psychine, as I was perfectly restored to health and to-day I never felt better in my life. Psychine has been a god-send to me. MRS. ANDREW CAMPBELL, Cottonwood, N.W.T.

PSYCHINE never disappoints. PSYCHINE has no substitute. There is no other medicine "Just as good."

At all dealers, 50c. and \$1.00 per bottle. If not write to DR. T. A. SLOCUM, Limited, 179 King St. W., TORONTO

Dr. Root's Kidney Pills are a sure and permanent cure for Rheumatism, Bright's Disease, Pain in the Back and all forms of Kidney Trouble. 25c per box, at all dealers.

Eat, Drink and Be Merry

A GUARANTEED CURE FOR PILES Itching, Blind, Bleeding, Protruding Piles. Drug stores are authorized to refund money if FAZO OINTMENT fails to cure in 6 to 14 days. 50c.

AUTUMN DRESSES.

When the maple turns to crimson, And the sassafras to gold; When the gentian's in the meadow And the aster in the wood; When the moon is lapped in vapor, And the night is frosty cold.

When the chestnut burrs are opened, And the acorns drop like hail, And the drowsy air is startled With the thumping like the fall— With the drumming of the partridge, With the whistle of the quail.

Through the rustling woods I wander, Through the jewels of the year, From the yellow uplands calling, Seeking her who still is dear; She is near me in the autumn, She, the beautiful, is near.

Through the smoke of burning summer, When the weary winds are still, I can see her in the valley, I can see her on the hill, In the splendor of the woodlands, In the whisper of the rill.

For the shores of earth and heaven Meet and mingle in the blue; She can wander down the glory To the places that she knew— Where the happy lovers wandered In the days when life was true.

So I think when days are sweetest And the world is wholly fair, She may sometimes steal upon me Through the dimness of the air, With the cross upon her bosom And the amaranth in her hair.

Once to meet her, ah, to meet her, And to hold her gently fast, Till I blessed her, till she blessed me— That were happiness at last; That were bliss upon our meetings In the autumn of the past. —Bayard Taylor.

OPENING HUDSON BAY.

Prince Albert Board of Trade Initiates Big Movement.

The Prince Albert Board of Trade has initiated a movement to urge upon the Provincial and Federal Governments immediate action to prepare the Hudson Bay route for navigation. They will seek the co-operation of every Board of Trade in the three prairie provinces. The Prince Albert Advocate, in discussing the subject points out that Prince Albert, being the most northerly railroad point in Saskatchewan, and a very old Hudson Bay Co. post, is probably more in touch with the north than any other city, and Hudson Bay captains who are frequently here always declare that the bay is navigable from midsummer until the end of December, and sometimes for a month longer. The dangerous month, they state, is July, when floating ice from the Arctic regions comes swirling through the straits, but when this has disappeared there is nothing to prevent ocean steamers running from Port Churchill to Europe up to Christmas. The Advocate adds that the feeling of the meeting was that eastern members of Parliament would never willingly consent to the Hudson Bay route being opened, and for this reason it was decided to begin a vigorous campaign to demand the rights of the West. This is, perhaps, hardly a fair view to take. Doubtless some people would seek to compel the West to send out its products through Eastern Canada, even though that should be the more expensive way, but the great majority of eastern people believe that to retard the progress of the West by any such act as that would be to retard the progress of the whole of Canada. The reason that the Hudson Bay route is not more discussed in the east is simply because the people do not yet believe it is a practical project. When it is proved to be practical, and the cheapest route to Europe it will be developed, and it is the duty and opportunity of the people of the West to show it is practical.

Big Exploring Expedition on Tapis.

Bronzed by the sun, George Elson arrived in Montreal recently and told once more the heroic struggle made by Lonidas Hubbard in his effort to get through the wilds of Ungava in the immediate neighborhood of the Labrador coast.

Elson is evidently carefully guarding a new proposition in which some of the big explorers of the continent are to take part, but just what remains to be seen.

The youthful guide who was with Hubbard almost to the hour he died from hunger and exposure, and then took the explorer's widow to the scene of her husband's death, has recently returned from a most successful trip with Mr. S. P. M. Tasker, of Baltimore, Md., one of the explorer-huntmen of America.

Apart altogether from the sportsman's end of the story, Elson comes with a tale that is wonderfully interesting to the public.

They left Missinavi Station, well on the northern boundary, on June 25, and reached Moose on July 11. They remained there ten days and then went to Charlton Island by the Hudson Bay Co.'s steamer, from there to Whale River, and they were soon on the direct course home.

Moose and deer were not seen, but caribou was plentiful, and there was a good supply of partridge and that class of game. There are any quantity of brook and speckled trout.

Rear Admiral Denison.

Capt. John Denison, A. D. C., recently gazetted Rear-Admiral, with seniority of Sept. 18, is a brother of Lieut.-Col. George T. Denison of Toronto. He was born in Toronto in 1853, and educated at Upper Canada College. Later he joined the Britannia training ship, and in April, 1867, entered the Royal Navy as a cadet. His rise there has been rapid. He attained midshipman's rank in 1869, was made sub-lieutenant in 1873, lieutenant in 1878 and commander in 1881. Five years later he won his captain's commission, and was placed in charge of H. M. S. Firebrand in the China fleet. There he remained for four years, and was subsequently given command of the Goessamer and the Anson. In May, 1893, he was selected to command the royal yacht Victoria and Albert and in 1897 was appointed captain of the Laconia, a cruiser of the first class. Now, at the age of fifty-three, he has succeeded in attaining the rank of rear-admiral.

SELECTIONS

BUILDING CEMENT.

The Most Ancient Form Was Simply Burned Limestone.

Cement, concrete and especially "reinforced concrete" will, according to some authorities, solve many of the hard problems confronting the architects and builders of modern structures. Cement is known to have been used by the Chaldeans, Egyptians, Greeks and Romans. The most ancient form of cement was simply burned limestone, more or less pure, used very much as ordinary lime is used at the present time. The Romans were the first to adulterate lime by adding certain clay soils and slate for the purpose of making a cement of a hydraulic nature—that is, one which would set or harden under water. Pliny, who lived in the first century A. D., describes the method of modifying ordinary burned limestone and converting it into a form of hydraulic cement.

In ancient times it was believed that the best cement was made from the hardest rock, and this opinion was not modified from the time of the Romans down to the eighteenth century. However, John Smeaton, the man who built the second Eddystone lighthouse, in course of examining the various hydraulic cements for use in the foundation and masonry made the important discovery that the quality of hydraulic cement depends upon the amount of clay in the limestone. This is conceded to be the most important discovery in the art in nearly twenty centuries.

On the Isle of Portland, in the south of England, there are certain quarries of limestone which have been worked for many years, in former times producing building stone. In 1824 an Englishman named Joseph Aspdin of Leeds, patented a process for mixing and burning lime and clay. The product looked so much like the Portland limestone that he called it "portland cement," from which the commonly known name given to nearly all kinds of hydraulic cement was derived.—Chicago News.

Scientific Wrecks.

The German government has taken possession of a short strip of track near Berlin and is planning to execute a unique series of railroad "accidents" made to order. Every variety of misplaced switch will be tested, every possible defect in wheels, axles and car equipment will be tried out, and the grand finale is to be an immense head-on collision of locomotives. These spectacular exhibitions are not planned by the government as a national amusement. They are for the purpose of scientific experiment, so that the engineers and railway experts may study ways and means to prevent accidents of all kinds in the future.

Railroad disasters have occurred with alarming frequency in the German empire. It is estimated that the German railways lose \$1,200,000 annually through damages. After the causes and effects of each variety of wreck have been noted it will be the task of the government officials to devise safeguards.—St. Louis Post-Dispatch.

Tallest High School Student.

Carl Fletcher, standing six feet seven and a half inches in his shoes, a member of the class of '09 of the Seattle High school, will hardly have his claim disputed to being the tallest high school student in the United States. Sophomore Fletcher is but eighteen years old, so that by the time he reaches "man's stature" he should have added at least three more inches to his height. The abnormal development of Carl Fletcher "upward" is not readily ascribed to heritage. Fletcher pere is but five feet five inches, and the school-boy's mother is four inches taller than her husband. All of the members of the family are of normal height, although an elder brother, manager of the Latona drug store, is six feet two inches.—Seattle Times.

The Biggest Telescope.

The biggest telescope in the world is the Common telescope, five full feet in diameter, twenty inches wider than the Yerkes. It was constructed ten years ago by Dr. A. A. Common, a well known astronomer of England, who wanted it for research work. He died soon afterward, and his fine telescope became idle. Two years ago it was purchased by the Harvard college observatory, which proceeded at once to mount it on the observatory grounds at Cambridge. The work has been necessarily slow, for mounting a great telescope is not like building a house.

Sulphur Under Quicksand.

Most of the sulphur consumed in the United States comes from Louisiana, where are vast deposits at a depth of from 600 to 800 feet. As there is a layer of quicksand a hundred feet thick above the sulphur, it was impossible until lately to get out paying quantities. Now, however, it is secured by driving down two pipes. One pipe carries a jet of steam, which, coming in contact with the solid bed of sulphur, melts it into a liquid. This is then forced to the surface by air pressure through the other pipe.

A New Potato.

Vegetarians will doubtless hail with delight the advent of a new potato, blue of skin and yellow of interior, which is about to be placed upon the market. This potato is known as the Salanum commersonii and is the result of scientific cultivation at Reading, England. It has a distinct flavor of its own. Epicures describe it as a combined flavor of turnips and asparagus.

FOOD IRON

You need Iron. Everybody does. The harder you work, the more you worry, the more Iron you require. But Crude Iron won't do. Iron Pills, Iron Tinctures, Iron Tonics are useless in nineteen cases out of twenty. You must have pre-digested Iron or your blood will not assimilate it.

FERROL

furnishes the Iron you need in combination with Cod Liver Oil, and so intimately incorporated with the oil that the most delicate digestive organs cannot fail to assimilate it.

The value of the combination cannot be overestimated. It builds up and fortifies the system against Coughs, Colds, Bronchial Affections and kindred troubles. If any of these diseases have already been contracted, or if the lungs are affected or threatened, FERROL cures by enabling nature to throw off the disease, not by "killing the germs," which is a physical impossibility.

FERROL is an absolute specific for Croup and Bronchitis, and no household where there are children can afford to be without it.

FERROL is not a patent mystery. The formula is freely published. It is prescribed by the best Physicians. It is endorsed by the most eminent Medical Journals. It is used in prominent Hospitals, Sanitariums, etc.
